The Roman law, as practifed in the times of its liberty, paid alfo a great regard to cullom; but not fo much as our law: it only then adopting is when the written law was deficient. Though the reafons al. leged in the digelt will fully jultify our practice in making it of equal authority with, when it is not contradicted by, the vritten law. "For fince (fays Julianus) the written law binds us for no other reafon but becaufe it is approved by the judgment of the people, therefore thofe laws which the people have approved without writing ought alfo to bind every body: For where is the difference, whether the people declare their affent to a law by fuffrage, or by a uniform courfe of akting accordingly?" 'Thus did they reafon while Rome had fome remains of her frcedom ; but, when the imperial tyranny came to be fully eftablithed, the civil laws fpeak a very different language. ©und principi placuit legis babet vigorem, cum populus ei et in eum omre fusm imperium et potellatem conferat, fays. Ulpian. Imperator folus et conditor et interpres legis exifimatur, fays the code. And again, Sacrilegii infar eft reforipto principis abviari. And indeed it is one of the characterillic marks of Britifh liberty, that the common law depends
(A) His reports, for inflance, are thyled $\times \alpha \tau$ ts, $\sum_{n n v}$ " the reports;" and in quoting them.we ufually fay, 1 or 2 Rep. not 1 or 2 Coke's Rep. as in citing other authors. The reports of judge Croke are alfo cited. in a peculiar manner, by the name of thofe princes in whofe reigns the cafes reported in his three voInmes were determined; viz. queen Elizaheth, king James, and king Charles I.; as well as by the numher of each volume. For fometimes we call them $t$, 2, and 3 Cro.; bat more commonly Cro. Eliz. Cro. Jac. and Cro. Car.
(B) It is ufually cited either by the name of Co. Litt. or as Inf.
(c) Thefe are cited as 2,3 , or 4 Inft. without any author's name. An bonorary difinction, which, we obferved, is paid to the works of no other writer; the gencrality of reporte and other tracts being quoted in the same of the compiler, as 2 Ventris, + Lconard, I Siderfin, and the like,

Law of dependsupon cuitom; which carries this interual evi--England. dence of freedom along with it, that it probably was -r...
II. The fecond branch of the unwritten laws of England are particular culoms, or laws which afeen only the inhabitants of particular diftricts.

Tlefe particular culloms, or fome of them, are without doubt the remains of that multitude of local cultons beforc-mentioned, out of which the common
law, as it now flands. was collected at firf by king Alfred, and afterwards by king Edgar and Edward the confefor: each diltrict mutually facrificing fome of its own fpecial ufages, in order that the whole -kingdom might enjoy the benefit of one uniform and univerfal fyltem of laws. But, for reafons that have -been now long forgotten, particular counties, cities, towns, manors, and lordhips, were very early indulged with the privilege of abiding. by their own cultoms, in contradifinetion to the reft of the nation at large : which privilege is confirmed to them by feveral acts of parliament.

Such is the cuftom of gavelkind in Kent and fome other parts of the kingdum (though perlaps it was -alfo general till the Norinan conqueft); which ordains, among other things, that not the eldeft fon only of the father fhall fucceed to his inheritance, but all the fons alike; and that, thourh the anceltor be attainted -and hanged, yet the heir fhall fucceed to his ellate, without any efcheat to the lord.-Such is the cuftom that prevails in divers ancient boroughs; and therefore called borouglb-englifh, that the youngeft fon flall inherit the eftate, in preference to all his eldcr brothers.- Such is the cuftom in other boroughs, that a widow fhall be entitled, for her dower, to all her hufband's lands; whereas at the common law the fhall be enduwed of one third part only. -Such alfo are the fpecial and particular cultoms of manors, of which every one has more or lefs, and which bind all the copyhold tenants that hold of the faid manors.-Such likewife is the cultom of holding divers inferior court, with power of trying caufes, in cities and trading towns; the right of holding which, when no royal grant can be fhown, depends entirely upon immemorial and eftablifhed ufage.-Such, laftly, are many particular cufoms within the city of London, with regard to trade, apprentices, widows, orphans, and a variety of other matters. All thefe are contrary to the general law of the land, and are good only by fecial ufage ; though the cultoms of London are alfo confirmed by act of parliament.

To this head may molt properly be refetred a particular fyftem of cuttoms ufed only among one fet of the king's fubjeets, called the cuffom of merchants, or lex mercataria: which, however different from the general rules of the common law, is yet ingrafted into it, and made a part of it ; being allowed, for the beneft of trade, to be of the utnoll validity in all commercial tranfactions; for it is a maxim of law, that cuilibet in fual arte credendum efo.

The rules relating to particular cuftoms regard either the proof of their exillence; their legality when proved; or their ufual method of allowance. And firf we will confider the rules of proof.

As to gavelkind, and borough englifh, the law takes particular notice of them; and there is no occation to
$\mathrm{N}^{\circ} 176$.
prove, that fuch cultoms actually exits, But only that the lands in quellion are fubject thereto. All other private cuftoms muft be particularly pleaded; and as well the exiftence of fuch cuftoms muit be fhown, as that the thing in difpute is within the cultom alleged. The trial in both cafes (both to flow the exittence of the cuftom, as, " that in the manor of Dale lands fhall defcend only to the heirs male, and never to the heirs female;" and alfo to fhow "that the lands in queftion are within that manor") is by a jury of iz men, and not by the judges; except the fame particular cuftom has been before tried, determined, and recorded, in the fame court.
The cuftoms of London differ from all others in point of trial: for if the exittence of the cuttom be brought in queftion, it fhall not be tried by a jury, but by certificatc from the lord mayor and aldermers by the mouth of their recorder; unlefs it be fuch a cuftom as the corporation is itfelf interefted in, as a right of taking toll, \&c. for then the law permits them not to certify on their own behalf.

When a cuttom is actually proved to exift, the next inquiry is into the legality of it ; for if it is not a good cultom, it ought to be no longer ufid. Malus $u / u s$ abolendus $\rho f$, , is an eftablifhed maxim of the law. To make a particular cuftom good, the following are neceflary requifites.

1. That it have been ufed fo long, that the memory of man runneth not to the contrary. So that, if any one can fhow the beginning of it, it is no good cuftom. For which reafon, no cutom can prevail againft an exprefs act of parliament; fince the Atatute itfelf is a proof of a time when fuch a cuitom did not exift.
2. It mull have been continzed. Any interruption would caufe a temporary cealing: the revival gives it a new beginning, which will be within time of memory, and thercupon the cuftom will be void." But this muft be underitood with regard to an interruption of the right; for an interruption of the poffeffion only; for 10 or 20 years, will not deftroy the cuftom. As if the inhabitants of a parifh have a cullumary right of watering their cattle at a certain pool, the cuifom is not deffroyed though they do not ufe it for 10 years ; it only becomes more difficult to prove: but if the right be any how difcontinued for a day, the cuthom is quite at an end.
3. It mult have been peaceable, and acquiefced in : not fubject to contention and difpute. For as cultoms owe their original to common confent, their heing ims memorially difputed, either at law or otberwife, is a proof that fuch confent was wanting.
4. Cuftoms mult be reaforable; or rather, taken negatively, they mult not be unreafonable. Which is not always, as Sir Edward Coke fays, to be underftood of every unlearned man's reafon; but of artificial and legal reafon, warranted by authority of law. Upon which account a cultom may be good, though the particular reafon of it cannot be affigned ; for it fufficeth, if no good legal reafon can be affigned againtt it. Thus a cuftom in a parifh, that no man hall put his bealts into the common till the third of October, would be good; and yet it would be hard to fhow the reafon why that day in particular is fixed upon, rather thas the day before or after. But a cuftom, that no cattle

Thall be put in till the lord of the manor has firft put in his, is unreafonable, and therefore bad: for peradventure the lord will never put in his; and then the tenants will lofe all their profits.
5. Cuftoms ought to be certain. A cuftom, that lands fhall defcend to the moft worthy of the owner's blood, is void ; for how thall this worth be determined? but a cuftom to defcend to the next male of the blood exclufive of females, is certain, and therefore good. A cuftom to pay two pence an acre in heu of tithes, is good; but to pay fometimes two pence and fometimes three pence, as the occupier of the land pleafes, is bad for its uncertainty. Yet a cuftom, to pay a year's improved value for a fine on a copyhold cltate, is good; though the value is a thing uncertain : for the value may at any time be afcertained; and the maxim of law is, Id certum of, quod cortum reddi potef.
6 Cultoms, though eftablifhed by confent, mut be (when eftablifhed) compulfory: and not left to the option of every man, whether he will ufe them or no. 'Pherefore a cullom, that all the inhabitants fhall be rated toward the maintenance of a bridge, will be good; but a cuftom, that every man is to contribute thereto at his own pleafure, is idle and abfurd, and indeed no cuftom at all.
7. Lattly, cuftoms mult be confifent with each other. One cuftom cannot be fet up in oppofition to another. For it both are really cultoms, then both are of equal antiquity, and both ellablifhed by mutual confent: which to fay of contradictory cultoms, is abfurd. Therefore, if one man preferibes that by cullom he has a right to have windows looking into another's garden, the wher cannot claim a right by cultom to llop up orobllruct thofe windows: for thefe two contradictory cullons cannot both be good, nor both ftand together. He ought rather to deny the exiftence of the furmer cultom.

Next, as to the allowernce of feecial cuttoms. Curtoms, in derogation of the cummon law, muft be conftrued ftrictly. Thus, by the cuftom of gavelkind, an infant of 15 years may by one fpecies of conveyance (called a deed of feoffinent) convey away his lands in fee fimple, or for ever. Yet this cuftom dors not impower him to ufe any other conveyance, or esen to leafe them for feveri years: for the cuftom mutt be ftrictly pur. fued. And, moreover, all ipecial cuitoms mull fub. mit to the king's prevogative. Therefore, if the king purchafes lands of the nature of gavelkind, where all the fons inherit equally ; yet, upon the king's demife, his eldeit fon thall fucceed to thofe lands alone. And thus much for the fecond part of the leges non foripta, or thofe particular cultoms which affect partucular perfons or diftricis only.
111. The third branch of them are thofe peculiar laws which by cuttom are adopted and ufed only in certain peculiar courts and jurifdictons. And by thefe are un-- deltond the civil and canon laws.

It may feem a litle improper, at firf view, to rank thefe laws under the head of leges non foripta, or unwritten laws, feeing they are fet forth by authority in their pardecs, their codes, and their inftitutions; thei:- councils, decrees. and decretals; and enforced by an immenfe number of expofitions, decifions, and treatifes of the learned in both branches of the law. But this is done after the example of Sir Matthew Hale,

Vol. IX. Part. II.
becaufe it is moft plain, that it is not on account of their being written laws, that either the canon law, or the civil law, have any obligation within this kingdom: ncither do their force and efficacy depend upon their own intrinfic authority; which is the cafe of our writ. ten laws or acts of parliament. They bind not the fubjects of England, becaufe their materials were coilecied from popes or emperors; were digefted by Juftinian, or declared to be authentic by Gregory. Thefe confiderations give them no authority here: for the legiflature of England doth not, nor ever did, recognize any foreign power, as fuperior or equal to it in this kingdon ; or as having the ri fhe to give law to any the meanelt of its fubjects. But all the ftrength that either the papal or imperial laws have obtained in this realm (or indeed in any other kingdom in Eu:opt) is only becaufe they have been admitted and rectived by immemorial ufage and cullom in fome particular cafes, and fome particular courts; and then they form a branch of the leges non firipta, or cuilomary law: or elfe, becaufe they are in fome other cafes introduced by confent of parliament, and then they oxe their validity to the leges foripta, or Atature law. This is exprefsly declared in tbufe remarkable words of the ftatute 25 Hen. VIII. c. 21. addreffed to the king's royal majety. - "This your grace's realm, recognizing no fuperior under God but only your grace, hath been and is free from fabjection to any man's laws, but only to fuch as have been devifed, made, and ordained within this realm for the wealth of the fame; or to fuch other as, by fufferance of your grace and your progenitors, the people of this your realm have taken at heir free liberty, by their own confent, to be ufed among them; and have bound themfelves by long ufe and cufton to the obfervance of the fame: nut as to the obfervance of the laws of any foreign priuce, potentate, or prelate; but as to the cuftomed and ancient laws of this realm, originally eftablifhed as laws of the fame, by the faid fufferance, coufents, and cultom; and none othersife."

1. By the civil law, abfolutely taken, is generally underftood the civil or municipal law of the Roman empire, as comprifed in the inttintes, the code, and the diget of the emperor Jnitinian, and the novel conititutions of timfelf and lome of his fucceflurs; of which it may not be amifs to g se a thort and general ac. count.

The Roman law (founded firt upon the regal contiturions of therr ancient kings, nest upon the 12 tables of the decemvir!, then upon the laws or fratutes enatzed by the fenate or people, the edicts of the pretor, and the refponfa prudertum or opinions of learned lawyers, and lafty upon the imperial decrees or contitutions of fucceff ve emperora) had grown to fo great a bulk, or, as Livv exprefles it, lam immenfus aliarum fuper alias acervatarmo legum cumulus, that they were computed to be many camels luad by an author who preceded Jultinian. This was i., part reinedied by the colle:tions of three private lawyers, Gregorius, Hermogenes, and Papirius; and then by the emperor Theodofms the younjer, by whofe orders a code was compiled, A. D. $43^{3}$, being a methodical collection of all the imperial conttitutions then in force: which Theodofian code was the only book of civil law received as authentic in the weftern part of Europe, till 4 many

Civil law.

I Law of Englard.
many centuries after: and to this it is probable that the Franks and Goths might frequently pay fome regard, in framing legal conflitutions for their newly trected kingdoms. For Juftinian commanded only in the eaftern remains of the empire ; and it was under his aufpices, that the prefent body of civil law was compiled and finifhed by Tribonian and other lawyers, about the ycar 533 .

This confifts of, I. The inflitutcs; which contain the elements or firt principles of the Roman law, in four books. 2. The digefts or pandects, in 50 books; containing the opinions and writings of eminent lawyers; digefted in a fyftematical method. 3. A new code, or collestion of imperial conftitutions; the lapfe of a whole century having rendered the former code of Theodofius imperfect. 4. The novels, or new confitutions, pofterior in time to the other books, and amounting to a fupplement to the code; containing new decrees of fucceffive emperors, as new queftions happened to arife. There form the body of Roman law, or corpus jn-is civilis, as publifhed about the time of Juftinian: whicl, however, fell foon into negleet and oblivion, till about the year 1.30 , when a copy of the digefts was found at Amalfi in Italy; which accident, concurring with the policy of the Roman ecclefiattics, fuddenly gave new vogue and authority to the civil law, introduced it into feveral nations, and occafioned that mighty inundation of voluminous comments, with which this fyttem of law, more than any other, is now loaded.
2. The canon law is a body of Roman ecclefiatical

Canon law. law, relative to fuch matters as that church either bas, or pretends to have, the proper jurifdiction over. This is compiled from the opinions of the ancient Latin fathers, the decrees of general councils, the decretal epifles and bulls of the holy fee. All which lay in the fame diforder and confution as the Roman civil law : till, about the year 1151, one Gratian an Italian monk, animated by the difcovery of Juftinian's pandects, reduced the ecclcfiaffical conflitutions alfo into fome method, in three books; which he entitlcd Concordia difcordontium canonum, but which are generally known by the name of Decretum Gratiani. Thefe reached as low as the time of Pope Alexander III. The fublequent papal decrees, to the pontificate of Gregory IX. were publifhed in much the fame method under the aufpices of that pope, about the year 1230, in five books; entitled Decretalia Gregorii noni. A fixth book was added by Boniface VIII. about the year 1298, which is called Sexitus Decretalium. The Clementine conflitutions, or decrees of Clement V. were in like manner authenticated in 1317 by his fucceffor John XXII.; who alfo publihed 20 conflitutions of his own, called Extraragantes Foannis: all which in fome meafure anfwer to the novels of the civil law. To thefe have been fince added fome decrees of later popes in five books, called Exitravagantes Commanes. And all thele together, Gratian's decree, Gregory's decretals, the fixth decretal, the Clementine conflitutions, and the Extravagants of John and his fucceffors, form the corpus juris canonici, or body of the Roman canon law.

Befides thefe pontifical collections, which during the times of popery were received as authentic in this inland, as well as in other parts of Chriftendom, there
is alfo a kind of national canon law, compofed of le. gatine and provincial conftitutions, and adapted only to the exigencies of this church and kingdom. The legatine contitutions were ecclefiaftical laws, enacted in national fynods, held under the cardinals Otho and Othobon, legates from Pope Gregory IX. and Pope Clement IV. in the reign of King Henry III. about the years 1220 and 1268. The provincial conftitutions are principally the decrees of provincial fynods, held under divers archbihhops of Canterbury, from Stephen Langton in the reign of Henry III. to Henry Chichele in the reign of Henry V.; and adopted alfo by the province of York in the reign of Henry VI. At the dawn of the reformation, in the reign of King Henry VIII, it was enacted in pariaiment, that a review fhould be had of the canon law; and till fuch review fhould be made, all canons, conftitutions, ordinances and fynodals provincial, being then already made, and not repugnant to the law of the land or the king's prerogative, thould fill be ufed and executed. And, as no fuch review has yet been perfected, upon this flatute now depends the authority of the canon law in England.

As for the canons enaicd by the clergy under James $I$. in the year 1603 , and never confirmed in parliament, it has been folemnly adjudged upon the principles of law and the confititution, that where they are not merely declaratory of the ancient canon law, but are introductory of new regulations, they do not bind the laity, whatever regard the clergy may think proper to pay them.

There are four fpecies of courts, in which the civil and canon laws are permitted under different reItrictions to be ufed. 1. The courts of the archbifhops and bifhops, and their derivative officers; ufually called courts Cbriftian, (curia Cbriftianitatis), or the eaclefaffical courts.a 2. The military courts. 3. Tbe courts of admiralty. 4. The courts of the two univerities. In all, their reception in general, and the different degrees of that reception, are grounded entirely upor cuftom; corroborated in the latter inftance by act of parliament, ratifying thofe charters which confirm the cuftomary law of the univerfities. The more minute confideration of them will fall under their proper articles. It will fuffice at prefent to remark a few particulars relative to them all, which may ferve to inculcate more ftrongly the doctrine laid down concerning them.

1. And firf, the courts of common law have the fuperintendency over thefc courts; to keep them within their jurifdictions; to determine wherein they exceed them; to reftrain and prohibit fuch excefs; and (in cafe of contumacy) to punifh the officer who executes, and in fome cafes the judge who enforces, the fentence fo. declared to be illegal.
2. The common law has referved to itfelf the expofition of all fuch acts of parliament, as concern either the extent of thefe courts, or the matters depending before them. And therefore, if thefe courts either refufe to allow thefe acts of parliament, or will expound them in any other fenfe than what the common law puts upon them, the king's courts at Weftminfter will grant prohibitions to reftrain and control them.
3. An appeal lies from all thefe courts to the king, in the latt refort ; which proves that the jurifdiction land, and not from any foreign potentate, or intrinfic authority of their own.-And, from thefe tbrce Arong marks and enfigns of fuperiority, it appears beyond a doubt, that the civil and canon laws, though admitted in fome cafes by cuftom in fome courts, are only fubordinate and leges fub graviori lege; and that thus ad. mitted, reftrained, altered, new-modelled, and amended, they are by no means with us a diftinct independent fpecies of laws, but are inferior branches of the cuftomary or unwritten laws of England, properly cal. led the kings ecclefiaflical, the king's military, the king's maritime, or the king's academical, laws.

Let us next proceed to the leges foripte, the written laws of the kingdom; which are ftatutes, acts, or edicts, made by the king's majelly, by and with the advice of the lords fpiritual and temporal and commons in parliament affembled. The oldeft of thefe now extant, and printed in our flatute books, is the famous magna chartn, as confirmed in parliament 9 Hen. III. though doubtlefs there were many acts before that time, the records of which are now loft, and the determinations of them perhaps at prefent currently received for the maxims of the old common law.

The manner of making thefe flatutes being explained under the articles Bile and Parliamset, we fhall here only take notice of the different kinds of Alatutes; and of fome gencral rules with regard to their conftruction (D).

Firft, as to their feveral kinds. Statutes are cither general or Jpecial, public or private. A general or public act is an univerfal rule that regards the whole comenunity: and of this the courts of law are bound to take notice judicially and eiv officio, without the flatute being particularly pleaded, or formerly fet forth, by the party who ciaims an advantage under it. Special or private acts are rather exceptions than rules, being thofe which only operate upon particular perfons and private concerns; fuch as the Remans cutitled fenatus decerta, in contradiftinction to the fenatios-confulta, which regarded the whole community; and of thefe the judges are not bound to tale notice, unlefs they be formaliy fhewn and pleaded. Thus, to fhew the ditinetion, the Atatute ${ }_{13}$ Eliz. c. 10 . to prevent fpintual perfons from making leafes for longer terms than 21 years or three lives, is a public act ; it being
a rule preferibed to the whole body of firitual perfons in the nation : but an act to emable the bihop of Chefter to make a leafe to A. B. for 60 years, is an exception to this rule; it concerns only the parties and the bio fhop's fucceffors, and is therefore a private act.
Statutes alfo are either declaratory of the comrnon law, or remedial of fone defects therein. Declaratory, where the old cuftom of the kingdom is almolt fallen into difufe, or become difputable; in which cafe the parliament has thought proper, in perpetuum rei toflimonium, and for avoiding all doubts and difficulties, to declare what the common law is and ever hath been. Thus the flatute of treafons, 25 Edw . III. cap. 2. doth not make any new fpecies of treafons: but only, for the benefit of the fubject, declares and enumerates thofe feveral kinds of offence which before wcre treafon at the common law. Remedial Patutes are thofe which are made to fupply fuch defeets, and abridge fuch fuperfuities, in the common law, as arife either from the general imperfection of all human laws, from change of time and circumlances, from the mittakes and unadvifed determinations of unlearned judges, or from any other caufe whatfoever. And this being done, either by enlarging the common law where it was too narrow and circumfcribed, or by reftraining it where it was too lax and luxuriant, hath accafioned another fubordinate divifion of remedial acts of parlís. ment into enlarging and reflruining flatutes. To inftance again in the cafe of treafon. Clipping the current coin of the kingdom was an offence not fufficiently gualded againt by the common law : therefore it was thought expedient by flatute 5 Eliz. c. 11. to make it high treafon, which it was not at the common law: fo that this was an enlarging flatute. At common law, alfo, Ipiritual conporations might leafe out their eftates for any term of years, till prevented by the Itatute 13 Eliz. before mentioned: this was therefore a refraino ing flatute.
Secondly, the rules to be obferved with regard to the contruction of flatutes are principally thefe which follow.

1. There are three points to be confidered in the conftruction of all remcdial ftatutes; the old law, the mifchief, and the remedy: that is, how the common law ftond at the making of the act; what the mifchief was, for which the common law did not provide; and

Law of what remedy the pariiament hath provided to cure England. this mifchief. And it is the bulinefs of the judges fo to
confrue the act, as to fupprefs the mifchief and advance the remedy. Let us inflance again in the fame reftraining flatute of 13 Eliz. c. 10 . By the comanon law, ecclefiafical corporations might let as long leafes as they thought proper: the mifchief was, that they lot long and unreafonable leafes, to the impoverifment of theii fuceefors: the remedy applied by the tatute was by making void all !eafes by eccleliattical bodies for longer terms than three lives or 21 years. Now in the conftruction of this flatute it is held, that leafes, tho' for a longer term, if made by a bifhop, are not void during the bifhop's continuance in hisfee; or, if made by a dean and chapter, they are not void during the continuance of the dean; for the act was made for the benefit and protecti.n of the fucceffor. The mif chief is therefore fufficiently fuppreffed by vacating them after the determination of the intereft of the granters; but the leafes, during their continuance, being nut within the mifchief, are nut within the remedy.
2. A flatute, which treats of things or perfons of an inferior rank, cannot by any general zuords be extended to chofe of a fuperior. So a ttatute, treating of "deans, prebendaries, parfons, vicars, and ofthers having firituasl promotion," is held not to exterel to bithups. though they have fpiritual promotion; deans being the higheff ferfons named, and bifhops beiug of a thill higher order.
3. Penal fatutes muft be contrued frictly. Thus the fatute I Edw. VI. c. 12. having enacted that thofe who are convicted of tealing horfos fhould not have the benefit of clergy, the judges conceived that this did not extend to him who fhould fteal but one borfe, "and therefore procured a new act for that purpole in the following year. And, to come rearer to our own times, by the thatute 14 Geo. II. e. 6 ftealing theep or other cattle, was made felony without benefit of clergy. But thefe general words, " or other cattle," being looked upon as much too lonfe to create a capital offence, the act was held to extend to nothing but mere fleep. And therefore, in the next feffions, it was found neceffary to make another flatute, 15 Geo. II. c. 34. extending the former to bulls, cows, oxen, fteers, bullocks, heifers, calves, and lambs, by name.

4 Statutes againft frauds are to be liberally and beneficially expounded. This may feem a contradietion to the laft rule; moft tatutes againtt frauds being in their confequences penal. But ihis difference is here to be taken: where the flatute acts upon the offender, and inflicts a penalty, as the pillory or a fine, it is then to be taken ftrictly; but when the ftatute acts upon the offence, by fetting a fide the fraudulent tranfaction, here it is to be contrued liberally. Upon this funting the flatute of 13 Eliz. c. 5. which voids all gifts of goods, \&c. made to defraud creditors and others, was hitd to extend by the general words to a gift made to defraud the queen of a forfeiture.
5. One part of a ltatute muft be fo conftrued by another, that the whole may (if poffible) fland: ut res magis valeat quam pereat. As if land be vefted in the king and his heirs by act of parliament, faving the right of $A$; and $A$ has at that time a leafe of it for three
years; here A fhall hold it for his term of three yeare, and afterwards it fhall go to the king. For this interpretation furnifhes matter for every claufe of the Ita. tute to work and operate upon. But,
6. A faving, totally repugnant to the body of the ach, is void. If therefore an act of parliament velts land in the king and his heirs, faving the right of all perfons whatfocver; or vefts the land of A in the king, faving the right of $A$ : in cither of thefe cafes the faving is totally repugnant to the body of the Batute, and (if good) would render the ftatute of no effect or opetation; and therefore the faving is void, and the land veits abfolutely in the king.
7. Where the common law and a ftatute differ, the common law gives place to the flatute; and an old flatute gives place to a new one. And this upon the general principle laid down in the latt fection, that leges pofferiores priores contrarias abrocont. But this is to be underitood only when the latter flatute is couched in negative terms, or by its matter neceffarily implies a negative. As if a furmer act fays, that a jurur upon fuch a trial fhall have tiventy pounds a-year, and a new flatute comes and fays he fhall have twenty merks; here the latter itatute, though it does not exprefs, yet neceflarily implies, a negative, and virtually repeals the former. For if twenty merks be made qualification futhicient, the former flatute which requires twenty pounds is at an end. But if both the acts be merely affirmative, and the fublance fuch that both may ftand together, here the latter does not repeal the former, but they fhall both have a concurrent efficacy. If by a former law an offence be indictable at the quarter - feffions, and a later law makes the fame offence indictable at the affizes; here che jurifdiction of the feffions is not taken away, but both have a concurrent jurifdiction, and the offender may be profecuted at either: unlefs the new Hatute fubjoins exprefs negative words; as, that the oftence fhall be indictable at the affizes, and not elfer where.
8. If a flatute, that repeals another, is itfelf repealed afterwards, the firft Itatute is thereby revived, without any formal words for that purpofe. So when the fatutes of 26 and 35 Hcn . VIII declaring the king to be the fupreme head of the church, were reptaled by a fiatute 1 and'z Philip and Mary, and this latter ilatute was afterwards repealed by an act of 1 Eliz. there needed not any exprefs words of revival in queen Elizabeth's faante, but thefe acts of king Henry were impliedly and virtually revived.
9. Acts of parliament derogatory from the power of fubfequent parliaments bind not. So the flatute in Hen. V1I. c. 1. which directs, that no perfon for affifting a king de fallo flall be attainted of treafun. by act of parliament or otherwife, is held to be good only as to common profecutions for high treafon; but will not reftrain or clog any parliamentary attainder. Becaufe the legiflature, being in truth the fovereign power, is always of equal, always of abfolute authority: it acknowledges no fuperior upon earth which the prior legiflature muft have been if its ordinances could bind the prefent parliamest. And upon the fame principle Cicero, in his letters to Atticus, treats with a proper contempt thefe rellraining claufes, which endeavour to-tie up the hands of fucceeding le-
giflatures
giflatures. "When you repeal the law itfelf (fays he), fuffer lefs. The laws cannot be frained by partiality yon at the fame time repeal the prohibitory claufe which guards againf fuch repeal."
10. Lafly, acts of parliament that are impoffible to be performed are of no validity: and if there arife out of them colliaterally any ahfurd confequences, manifeftly contradictory to common reafon, they are with regard to thofe collateral confequences void. We lay down the rule with thefe refiritinns: thnugh we know it is stnerally laid down more targely, that acts of parliament contrary to reafon are void. But if the parliament will p-fitively enact a thing to be done which is ynreadunable, we know of no power that can enntrol it : and the examples ufuall alleged in fuoport of this fenfe of the rule do none of them prove that where the main object of a thatute is unre..fonable the judges are at liberty to reject it : for that were to fet the judicial power above that of the leginature, which would be fulberive of all government. But where fome collateral matter arifes ont of the general words. and happens to be unreafnnable: there the judges are in decency to couclude that this confequence was not forefeen by the parliament and therefore they are at liberty to exprund the fatute by equite, and only gitas: boc difregard it. Thus if an act of parliament gives a man pnwer to try all caufes that arife within his ma nor of Dale; yet, if a caufe thould arife in which he himfelf is party, the act is conftrued not to extend to that, becaufe it is unreafonable that any man fhould determine his own quarrel. But, if we could conceive it poffible for the parliament to enact, that he thould try as well his own caufes as thofe of other perfons, there is no court that has power to defeat the intent of the legiflature, when coucbed in fuch evident and exprefs words as leave no doubt whether it was the intent of the legiflature or not.

Thefe are the feveral grounds of the laws of England: over and above which, equity is alfo frequently called in to affitt, to moderate, and to explain them. What equity is, and how impolfible in its very effeace to be reduced in ftated rules, hath been fhewn above. It may be fufficient, therefore, to add in this place, that, befides the liherality of fentiment with which our com-mon-law judges interpret acts of parliament, and fuch rules of the unsritten law as are not of a pofitive kind, there are alfo courts of equity eftablifhed for the henefit of the fubject, to detect latent frauds and concealments, which the procefs of the courts of law is not adapted to reath; to enforce the execution of fuch matters of truft and confidnce, as are binding in confcience, though not cognizable in a court of law ; to deliver from fuch dangers as are owing to misfortune or overfight; and to give a more fpecific relief, and more adapted to the circum lances of the cafe, than can aluays be ob:ained by the generality of the rules of the pofitive or common law. This is the bufinefs of the courts of equity, which however are only converfant in matters of property. For the freedom of our conftitution will not permit, that in criminal caftes a power thould be lotged in any jutge to conftrue the law otherwife than according to the letter. This caution, while it admirahly protects the public liberty, can rever hear hard upon individuals. A man cannot fuffar more punifhment than the law affigns, but he may
to inflict a penalty beyond what the letter will warrant; but, in cafes where the letter induces any apparent hardmip, the crown has the power tn pardon.
The objects of the laws of England are, 1. The rights of perfons. 2. The rights of things. 3. Mrivate wrongs. 4. Public wrongs.

## C H A P. I.

## Of the Rights of Persons.

SEet. I. Of the abfolute rights of indiviluals.
(1.) 1 HE objects of the Lazus of England are,
(z) Rights are the rights of perfons, or the rights of things.
(3) I'be rights of perfons are fuch as concern, and are annexed to, the perfons of men: and, when the perfon to whom they are due is regarded, they are called (fimply) rigbls; but, when we confider the perin from whon they are due, they are then denominated daties.
(+.) Perfons are either natural, that is, fuch as they are fromed by nature; or artificial, that is, created by human policy, as bodies politic or corporations
(5.) The rights of natural jerfons are, 1. Abfolute, or !uch as belong to individuals. 2. Relative, or fuch as regard :nembers of fociety.
(6) The alfolute rights of indivithuals, regarded by the munisipal laws (ivhich pay no attention to duties, of the abolute kind), compofe what it calied political or 2 vil liberty
(\%.) Political or civil liberty is the natural liberty of markind. fo far reflrained by human laws as is neceffary for the good of fociety.
(8) 'The abfolute rights or civil liberties of Englifhmen, as frequently declared in parliament, are principally three; the right of perfonal fecurity, of perfonal liberty, and of private property.
(9) The tight of perfonal fecurity confifts in the legal enjoyment of life, limb, body, health, and reputation.
(10.) The right of perfonal liberty confifts in the free power of loco motion, without illegal reftaint or banifhment.
(11.) The right of private property confifts in every man's free wfe and difpofal of his own lawful acquifitions, without injury or illegal diminution.
(12.) Befides thefe three primary rights, there are others which are fecondary and fubordinate; viz. (to preferve the former from unlawful attacks) 1. The conflitution and power of parliaments; 2. The limitation of the king's prerogative; -And (to vindicate them when actually violated) 3. The regular adminiftration of public jultice; 4. The right of petitioning for redrefs of grievances; 5. The right of having and ufing arms for felf defence.

## Sect. II. Of the parliament.

(1.) The relations of perfons are, 1. Public. 2. Private. The public relations are thofe of magifrates and

I

$\underbrace{\text { epitomited. }}$

$\qquad$
$\square$
people. Magillates are fuperior or fubordinatc. And of fupreme magiftrates, in England, the farliament is the fupreme legifative, the king the fupreme executive.
(2.) Parliaments, in fome thape, are of as high antiquity as the Saxon government in this ifland; and have fubfifted, in their prefent form, at leaft five hundred years.
(3.) The parliament is affembled by the king's writs, and its fitting mult not be intermitted above three years.
(4.) Its conftituent parts are the king's majelty, the lords fpiritual and temporal, and the commons reprefented by their members: each of which parts has a negative, or neceflary, voice in making laws.
(5.) With regard to the gencral law of parliament ; its power is abfolute: each houle is the judge of its own privileges; and all the members of either houfe are intitled to the privilege of fpeech, of perfon, of their domeltics, and of their lands and goods.
(6.) The peculiar privileges of the lords (befides their judicial capacity), are to hunt in the king's forefts; to be attended by the fages of the law; to make proxies; to enter protelts; and to regulate the election of the 16 peers of North-Britain.
(7.) The peculiar privileges of the comnons are to frame taxes for the fubject; and to determine the merits of their own elections, with regard to the qualifications of the electors and clected, and the proceedings at elections themfelves.
(8.) Bills are ufually twice read in each houfe, committed, engrofled, and then read a third time; and when they have obtained the concurrence of both houfes, and received the royal affent, they become aits of parliament.
(9.) The houfes may adjourn themfelves; but the king only can prorogue the parliament.
(10.) Parliaments are diffolved, 1. At the king's will. 2. By the demife of the crown, that is, within fix months after. 3. By length of time, or having fat for the fpace of feven years.
[xlvi.] Sect. III. Of the king and his title.
(1.) The fupreme executive power of this kingdom is lodged in a fingle perfon; the king or queen.
(2.) This royal perfon may he confdered with regard to, 1. His title. 2. His royal family. 3. His councils. 4. His duties. 5. His prerogative. 6. His revenue.
(3.) With regard to his tille; the crown of England, by the politive conftitution of the kingdom, lath ever been defcendible, and fo continues.
(4.) The crown is defcendible in a courfe peculiar to itfelf.
(5.) This courfe of defcent is fubject to limitation by parliament.
(6.) Notwithftanding fuch limitations, the crown retains its defcendible quality, and becomes hereditary in the prince to whom it is limited.
(7.) King Eghert, King Canute, and King William I. have been fucceffively conllituted the common focks, or anceftors, of this defcent.
(8.) At the revolution the convention of eflates, or seprefentative body of the nation, declared, that the Rifconduct of King James II, amounted to au abdica-
tion of the government, and that the throne was thereby vacimt.
(9.) In confequence of this vacancy, and from a re. gard to the ancient line, the convention appointed the next Proteftant heirs of the blood royal of King: Charles I. to fill the vacant throne, in the old order of fucceffion; with a temporary exception, or preference, to the perfon of King William III.
( 10. ) On the impending failure of the Proteflant line of King Charles I. (whereby the throne might again have become vacant) the king and parliament extended the fettlement of the crown to the Proteftant line of King James I. viz. to the Princefs Sophia of Hanover, and the heirs of her body, being Proteftants: And the is now the common ftock, from whom the heirs of the crown muft defcend.

## Sect. IV. Of the king's royal family.

(土.) The king's royal family confilts, firft, of the quecn: who is regnant, confort, or dowager.
(2.) The queen confort is a public perfon, and hath many perfonal prerogatives and diftinct revenues.
(3.) The Prince and Princefs of Wales, and the Princess-royal, are peculiarly regarded by the law.
(4.) The other princes of the blood-toyal are only intitled to precedence.

Srec. V. Of the councils belonging to the king.
(1.) The king's councils are, 1. The parliament. 2. The great council of pecrs. 3. The judges, for matters of law, 4. The privy council.
(2.) In privy-counfellors may be confidered, I. Their creation. 2. Their qualifications. 3. Their duties. 4. Their powers. 5. Their privileges. 6. Their diffolution.

## Sect. VI. Of the ling's duties.

(I.) The king's duties are 10 govern his people according to law, to execute judment in mercy, and to maintain the eftablifhed religion. Thefe are his part of the original contract between himfelf and the people; founded in the nature of fociety, and expreffed in his oath at the coronation.

Sect. VII. Of the king's prerogative.
(1.) Prerogative is that feecial power and preeminence which the king hath above other perfons, and out of the ordinary courfe of law, in right of his regal dignity.
(2.) Such prerogatives are either direct, or incidental. The incillental, arifing out of other matters, are confidered as they arife: We now treat only of the direct.
(3.) The dircat prerogatives regard, 1. The kirrg's dignity, or royal character; 2. His authority, or regal power; 3. His ravenue, or royal income.
(4.) The ling's dignity confits in the legal attributes of, 1. Perfonal fovereignty. 2. Abfolute perfection. 3. Political perpetuity.
(5.) In the king's autbority, or regal power, conlifts the executive part of government.
(6.) In forcign concerns; the ling, as the reprefenta.
av of tive of the nation, has the right or prerogative, 1. Of laid, fending and receiving ambaffadorz. 2. Of making treamifed. ties. 3. Of proclaiming war or peace. 4. Of iffuing reprifals. 5. Of granting fafe conducts.
(7.) In domeflie affairs; the ling is, firt, a conftituent part of the fupreme legillative power; hath a negative upon all new laws; and is bound by no tatute, unlefs fpecially named therein.
(8.) He is alfo confidered as the general of the king. dom, and may raife fleets and armies, build forts, appoint havens, erect beacons, prohibit the exportation of arms and ammunition, and confine his fubjects within the realm, or recal them from foreign parts.
(9.) The ling is alfo the fountain of juftice, and general confervator of the peace; and therefore may erect courts (wherein he hath a legal ubiquity), profecute offenders, pardon crimes, and iffue praclamations.
(10.) He is likewife the fountain of honour, of office, and of privilege.
(11.) He is alfo the arbiter of domeflic commerce; (not of foreign, which is regulated by the law of merchants); and is sherefore intitled to the erection of public marts, the regulation of weights and meafures, and the coinage or legitimation of money.
(12.) The king is, lattly, the fupreme head of the church ; and, as fuch, convenes, regulates, and diffolves fynods, nominates bifhops, and receives appeals in all ecclefiaftical caufes.

## Sect. VIlI. of the king's revenue.

(1.) The king's revenue is cither ordinary or extraordinary. And the ordinary is, 1. Eccleffiafical. 2. Temporal.
(2.) THE king's ecclefiafical revenue confifts in, 1. The cultody of the temporalties of vacant bifhoprics. 2. Corodies and penfions. 3. Extra-parochial tithes. 4. The firft fruits and tenths of benefices.
(3.) The king's ordinary temporal revenue confilts in, 1. The demefne lands of the crown. 2. The hercditary excife; being part of the confideration for the purchafe of his feodal profits, and the prerogatives of purveyance and pre-emption. 3. An annual fum iffuing from the duty on wine-licences; being the refidue of the fame confideration. 4. His forefts. 5. His courts of juftice. 6. Royal fifh. 7. Wrecks, and things jetfam, flotfam, and ligan. 8. Royal mines. 9 Treafure trove. 10. Waifs. 11. Eftrays. 12. Forfeitures for offences, and deodands. 13. Efcheats of lands. 14. Cuftody of ideots and lunatics.
(4.) The ling's extraordinary revemue, confifts in aids, fubfidies, and fupplits, granted him by the commons in parliament.
(5.) Heretofore thefe were ufually raifed by grants of the (nominal) tentb or fiftenth part of the moveables in every townhip; or by fcutages, hydages, and talliages; which were fucceeded by fubfidies affeffed upon individuals, with reiptet to their lands and goods.
(6.) A new fyttem of taxation took place about the time of the revolution: our modern taxes are therefore, 1. Annual. 2. Perpetual.
(7.) The annual taxes are, 1. The land-tax, or the ancient fublidy raifed upon a new affeftiment. 2. The
malt-tax, being an annual excife on malt, mum, cyder, and perry.
(8.) The perpetual taxes are, 1. The culloms, or tonnage and poundage of all merchandife exporied or imported. 2. The excifeduty, or inland impolition on a great variety of commodities. 3. The falt-duty, or excife on falt. 4. The polt office, or duty for the carriage of letters. 5. The ttamp-duty on paper, parchment, \&c. 6. The duty on houfes and windows. 7. The duty on licences for hackney coaches and chans. 8. The duty on offices and penfions.
(9.) Part of this revenue is applied to pay the intereft of the national debt, till the principal is difcharged by parliament.
(10.) The produce of thefe feveral taxes were originally feparatc and fpecific funds, to anfwer fpecific loans upon their refpective credits; but are now confolidated by parliament into three principal funds, the asgregate, getheral, and Soutb-fect funds, to anfwer all the debts of the nation: the public faith being allo fuperadded, to fupply deficiencies, and Atrengthen the fecurity of the whole.
(1 i.) The furpluffes of thefe funds, after paying the intereft of the national debt, are carried together, and denominated the finking fund: which, unlefs otherwife appropriated by parliament, is annually to be applied towards paying off fome part of the principal.
(12.) But, previous to this, the aggregate fund is now charged with an annual fum for the civil lijf; which is the immediate proper revenue of the crown, fettled by parliament on the king at his acceffion, for defraying the charges of civil government.

## Sect.IX. Of fubordinate magifrates.

(i.) Subordinate magiftrates, of the moft general ufe and authority, are, 1. Sberiffs. 2. Coroners. 3. Fuffices of the Peace. 4. Confables. 5. Surveyors of the bighways. 6. Overfeers of the poor.
(2.) The Beriff is the keeper of each county, annually nominated in due form by the king; and is (within his county) a judge, a confervator of the peace, a minitterial officer, and the king's bailiff.
(3.) Coroners are permanent officers of the crown its each county, elected by the freeholders; whofe office it is to make inquiry concerning the death of the king's fubjects, and certaiu revenues of the crown ; and alfo, in particular cafes, to fupply the office of fheriff.
(4.) Fuflices of the peace are magittrates in each county, itatutably qualified, and commiffioned by the king's majelly: with authority to conferve the peace; to hear and determine felonies, and other mifdemeanors; and to do many other acts committed to their charge by particular flatutes.
(5.) Conflables are officers of hundreds and townMips, appointed at the leet, and empowered to preferve the peace, to keep watch and ward, and to upprehend offenders.
(6.) Surveyors of the bighsuays are officers appointed annually in every parih ; to remove annoyances in, and to direa the reparation of the public roads.
(7.) Overfeers of the poor are officers appointed an. nually in every parifl ; to rclieve fuch impotent, and employ fuch Iturdy poor, as are fetted in each parifh, -by birth, -by parentage, - ky marriage, -or b;

40 days refidence; accompanied with, 1. Notice. 2. Renting a tenement of ten pounds annual value. 3. Paying their affeffed taxations. 4. Serving an annual office. 5. Hiring and fervice for a year. 6. Apprenticeßhip for feven years. 7. Having a fufficient eftate in the parifl.

Hii. Sect. X. Of the people, whether aliens, denizens, or natives.
(1.) The people are either aliens, that is, born out of the dominions, or allegiance, of the crown of Great Britain; or natives, that is, born within it.
(2.) Allegiance is the duty of all fubjects; being the reciprocal tie of the people to the prince, in return for the protection be affords them: and, in natiacs, this duty of allegiance is uatural aud perpetual ; in aliens, is local and temporary only.
(3.) The rights of natives are alfo natural and perpetual: thofe of aliens, local and temporary only; unlefs they be made denizens by the king, or naturalited by parliament.
liv.

## Sect. XI. Of the clergy.

(1.) The people, whether aliens, denizens, or natives, are alfo either clergy. that is, all perfons in holy orders, or in ecelefiatlical offiees; or laity, which comprehends the reft of the nation.
(2) The clerical part of the nation, thus defined, are, 1. Archbifhops and bilhops; who are clected by their feveral chapters, at the nomina ion of the erown, and afterwards confirmed and confecrated by eath other. 2. Deane and chapters. 3. Arch-deacons. 4 Rural deaus. 5. Parfons (under which are included appropriators) and viears: to whom there are generally re* quitite boly orders, profentition, inftitution, and induction 0. Curates. To which may be added, 7. Chureh-wardens. 8. Parih-elerks and fextons.

## Sect. XII. Of the civil fate.

(1.) The laity are divifible into three ftates; civil, military, and maritime.
(2.) The civil Itate (which includes all the nation, except the elergy, the army, and the navy, and many individuals among them allo), may be divided into the nolility and the commonalty.
(3.) The nobility are dukes, marquifes, earls, vifcounts, and barons. Thefe had anciently duties annexed to the ir refpective honours: they are created either by writ, that is by fummons to parliament ; or by the king's letters patent, that is, by royal grant: and they enjoy many privileges exclulive of their fenatorial capacity.
(4.) The commonaliy confift of knights of the garter, kuights bannerets, baronets, knights of the bath, knights ba helors, efquires, gentlemen, yeomen, tradefmeln, artificers, and labourers.
ivi. Sect. XIII. Of the nilitary and maritime flates.
(t) The miliary Atate, by the flanding confitutional law, confitts of the militia of each county, raifed from among the people by lot, officered by the No 176.
principal landholders, and commanded by the lord lieum tenant.
(2.) The more difciplined oceafional troops of the kingdom are !sept on foot only frum year to year by parliament; and, during that period, are governed by martial law, or arbitrary articles of war, formed at the pleafure of the crown.
(3.) The maritime ftate confilts of the officers and masmers of the Britill navy; who are governed by exprefs and permanent laws, or the artieles of the navy, eltablifhed by act of parliament.

## Sect. XIV. Of mafter and fervanto

(1.) The private, economical, relations of perfons are thofe of, 1. Mafier and fervant. 2. Hufband and wife. 3. Parcnt and child. 4. Guardian and ward.
(2.) The forlt relation may fubfitt between a nigfer
 to our laws): viz. 1. Menial fervants; who are bired. 2. Apprentices; who are bound by indentures. 3. Labousers; who are calually employed. 4. Stewards, bailiffs, and factors; who are rather in a miniferial Itate.
(3.) From this relation refult divers powers to the matter. and emoluments to the fervant.
(4.) The matter hath a property in the fervice of bis fervant; and mult be anfwerable for fuch acts as the fervant does by lis exprefs, or implied, command.
SECT. XV of bufland and wife.
(1.) The fecond private relation is that of marriage; which ineludes the reciprocal rights and ducies of buband and wife.
(2.) Marriage is duly contracted between perfons, 1. Confenting: 2. Free from eanonieal impediments, which make it voidable: 3. Free alfo from the civilimpediments, - of proor marriage, - of want of age,-of non-confent of parents or guardians, where requifite, -and of want of reafon; either of which make it totally void. A nd it mult be celebrated by a clergyman in due form and place.
(3). Marriage is diffolved, 1. By death. 2. By divorce in the fpiritual conrt; not a menfa et thoro only, but a vinculo matrimonii, for canonical caufe exilting previous to the contract. 3. By act of parliament, as for adultery.
(4.) By marriage the hufband and wife become one perfon in law: which unity is the principal foundation of their refpective rights, duties, and difabilities.

## Sect. XVI: Of parent and child.

(1.) The third, and moft univerfal private relation, is that of parent and child.
(2.) Childsen are, 1. Legitimate; being thofe who are born in lawful wedlock, or within a competent time after. 2. Baflurds, being thofe who are not fo.
(3). The duties of parents to legitimate children are, 1. Mainterance. 2. Protection. 3. Education.
(4.) The power of parents confits principally in correction, and confent to marriage. Both may after death be delegated by will to a guardian ; and the for mer alfo, lising the parent, to a tutor or malter.
(5.) The duries of legitimate children to parents are obedience, protection, and maintenance.
(7.) The rights of a bnftard are fuch only as he can acquire; for he is incapable of inheriting any thing.

## Sect. XVII. Of guardian and ward.

(i.) The fourth private relation is that of guardian and suard, which is plainly derived from the latt; thefe being, during the continuance of their relation, reciprocally fubject to the fame rights and duties.
(2.) Guardians are of divers forts: 1. Guardians by Rature, or the parents. 2. Guardians for nurture, afo figned by the ecelefiaftical courts. 3. Guardians in focage, affigned by the common law. 4. Guardians by flatute, alfigned by the father's will. All fubject to the fuperintendance of the court of chancery.
(3.) Full age in male or female for all purpofes is the age of 21 years (different ages being allowed for different purpofes) ; till which age the perfon is an infant.
(4.) An infont, in refpect of his tender years, hath various privileges, and various difabilities, in law; chiefly with regard to fuits, crimes, eftates, and contraets.

## Sect. XVIII. Of corporations.

(1.) Bodies politic, or corporations, which are artifcial perfons, are eftablifhed for preferving in perpetual fucceffion certain rights; which, being conferred on natural perfons only, would fail in procefs of time.
(2.) Corporations are, 1. Aggregate, confifting of many membcrs. 2. Sole, confifting of one ptrfon only.
(3.) Corporations are alfo either firitual, erected to perpetuate the rights of the church; or lay. And the lay are, I. Civil; erected for many temporal purpofes. 2. Eleenofynary; erected to perpetuate the charity of the founder.
(4.) Corporations are ufually erected and named, by virtue of the king's royal charter; but may be created by aet of parliament.
(5.) The powers incident to all corporations are, 1. To maintain perpetual fucceffion. 2. To aet in their corporate capacity like an individual. 3. To hold lands, fubject to the flat utes of mortmain. 4. To have a common feal. 5. To make by-laws. Which laft power, in fpiritual or eleemofynary corporations, may be executed by the king or the founder.
(6.) The duty of corporations is to anfwer the ends of their inftitution.
(\%) To enforce this duty, all corporations may be rifited: \{piritual corporations by the oidinary; lay corporations by the fouoder, or his reprefentatives: viz. the civil by the king (who is the fundator incipiens of all) reprefented in his court of king's benct, the eleemofynary by the endow=1 (whe is the fundator perfociens of fuch), or by his heirs or affigns.
(8.) Corporations may be difoived, i By act of parliament. 2. By the natural death of all their members. 3. By furrender of their franchifes. 4. By forfeiture of their charter.

Vol. IX. Part II.

CHAP. II.
Of the Rights of Things.

## Sect. I. Of Property in general.

(1.) A LL. dominion over external obje Ets has its original from the gift of the Creator to man in general.
(2.) The fubfance of things was, at firft, common to all mankind; yet a temporary property, in the ufe of them, might even then be acquired, and continued, by occupancy.
(3.) In procefs of time a permanent property was eftablifhed in the fubfance, as well as the ufe, of things; which was alfo originally acquired by occupancy only.
(4.) Left this property fhould determine by the owner's dereliftion or death, wherehy the thing would again become common, focieties have eftablifhed couveyances, wills, and beirbips, in order to continue the property of the firt occupant: and, where by accident fuch property becomes difoontinued or unknown, the thing ufually refults to the fovereign of the fate, by virtue of the municipal law.
(5.) But of fome things, which are incapable of permanent fubflantial dominion, there Alll fublifts only the fame tranfient ufufructuary property, which originally fubfilted in all things.

Sect. II. Of real property; and, firf, of corforeal hereditaments.
(i.) In this property, or exclufive dominion, confift the rights of things; which are, 1. Things ral. 2. Things perfonal.
(2.) In things real may be confidered, I. Their feveral kinds. 2. The tenures by which they may be holden. 3. The eflates which may be acquired therein. 4. Their title, or the means of acquiring and lofing them.
(3.) All the feveral kinds of things real are reducible to one of thefe three, viz. lands, tenements, or bereditaments; whereof the fecond includes the firt, and the third includes the firft and fecond.
(4.) Hereditaments, therefore, or whatever may come to be inherited (being the moft comprelenfive denomination of things real), are either corporeal or incorporeal
(5.) Corporeal hereditaments confift wholly of lands, in their largeft legal fenfe; wherein they include not only the face of the earth, but every other object of fenfe adjoining thereto, and fubfitting either above or beneath it.

## Sect. III. Of incorporeal hereditaments.

## Iธะ.

(i.) Incorporeal hereditaments are rights iffuing out of things corporeal, or concerning, or anuexed to, or exercifable within the fame.
(2.) Incorporeal hereditaments are, B. Advorufons. 2. Titbes. 3. Commons. 4. Ways. 5. Offices. 6. Dignities. 7. Franchifes. 8. Corsdies or penfions. 9. Anmuitics. 10. Rents.

$$
\begin{equation*}
4 \mathrm{~K} \tag{3.}
\end{equation*}
$$

(3.) An adrozofon is a right of prefentation to an ecclefiallical benelice; either appendant, or in grofs. This may be, 1. Prefentative. 2. Collative. 3. Donative.
(4.) Tithes are the tenth part of the increafe yearly ariling stom the profits and thock of lands, and the perfonal induttry of mankind. Thefe, by the ancient and pofitive law of the land, are due of common right to the parfon, or (by enduwment) to the vicar ; unters fpecially difcharged, 1. By real compoition. 2. By mefrription, either de modo decimandi, or de non decimando.
(5.) Common is a proft which a man hath in the lands of ano:her; being, 1. Cummon of palture; which is either appendant, appurtemant, becaufe of vicinage, or in grofs. 2. Common of pifeary. 3. Common of tuibary. 4. Common of ettovers, or botes.
(6.) Ways are a right of paffing over another man's ground.
(7.) Offices are the right to exercife a public or pivate employment.
(8.) For dignities, which are titles of honour, fee Chap. I. Sect. 12.
(9.) Franchijes are a royal privilege, or branch of the king's prerogative, fubfiting in the hands of a fubject.
(io.) Corodies are allotments for nne's fuftenance; which may be converted into poufions, fee Chap. 1. Sect. 8.
(11.) An annuity is a yearly fum nf mnney, charged upon the perfou, and not upon the lands of the granter.
(12.) Rents are a certain profit iffuing yearly out of lands and tenements; and are reducible to, 1. Kenttervice, 2. Rent-charge. 3. Rent-feck.

## Sect IV. Of the Feodal Syfem.

(1.) THE doctrine of tenures is derived from the feoclut law; which was planted in Europe by its northern conquerors at the diffolution of the Roman empire.
(2.) Pure and proper fends were parcels of land allotted by a chief to his followers, to be held on the condition of perfoually rendering due military fervice to their lord.
(3.) Thefe were granted by inveftiture; were held under the bond offealty; were inheritable only by defoendants; and could not be transferred without the mutual confent of the lord and valfal.
(4.) Improper fouds were derived from the other; but differed from them in their original, their fervices and renders, their deicent, and other circumftances.
(5.) The lands of Eggland were eonverted into feuls, of the improper kind, foon after the Norman conqueft ; which gave rife to the grand maxim of tenure, viz. That all lands in the kingdom are bolden, mediately or immediately, of the king.
(1.) The diftinction of tenures confifted in the nature of their fervices: as, 1. Chivalry, or knight-fervice; where the fervice was free, but uncertain. 2. Free focage; where the fervice was free, and certain. 3. Pure villenage; where the fervice was bafe, and uncertain.
4. Privileged villenage, or willein focage; where the fervice was bafe, but certain.
(2.) The moft univerfal ancient tenure was that in chivairy, or by knight- -ervice; in which the tenant of every knight's fee was bound, if called upon, to attend his lord to the wars. 'This was granted by livery, and perfected by homage and fealty; which ufually drew after them fuit of court,
(3.) The other fruits and confequences of the tenure by kuight-fervice were, 1. Aid. 2. Retief. 3. Primer feifin. 4. Wardhip. 5. Marriage. 6. Fines upon alienation. 7. Efcheat.
(t.) Grand ferjeanty differed from chivalry prineipally in its render, or fervice; and not in its fruits and conlequences.
(5.) The perfonal fervice in chivalry was at length gradually changed into pecuniary affeffenents, whick were callecl feutage or effuage.
(6.) Thefe mlitary tenures (except the fervices of ganil ferjeanty) were, at the reltoration of ling Charles, totally abolifhed, and reduced to free focage by act of parliament.

Sect. VI. Of the modern Engiifo Tenures.
(1.) Free focase is a tenure by any free, certain, and determinate fer viec.
(2.) This tenure, the relic of Saxon liberty, includes petit ferjeanty, tenure in burgage, and gavelkind.
(3.) Free focage lands partake ftrongly of the feodal nature, as well as thofe in chivalry: being holden; fubject to fome fervice, at the leat to feally and fuit of court ; fubject to relief, to wardhlip, and to efcheat, but not to marriage; fubject allo formerly to aids, primer feifin, and fines for nlienation.
(4.) Pure villenage was a precarious and Davifh tenure, at the abfoluce will of the lord, upon uncertain fervices of the bafeft nature.
(5.) From hence, by tacit confent or encroachment, have arifen the modern copybolds, or tenure by copy of court-roll ; in which lands may be ftill held at the (nominal) will of the lord, (but regulated) according to the cullom of the manor.
(6.) Thefe are fubject, like foeage lands, to ferviees relief, and efcheat ; and alfo to heriots, wardhip, and fines upon defcent and alienation.
(7.) Privileged villenage, or vilitin focage, is an exalted fpecies of copyhold tenure, upon bate, but certain, fervices; fublifting only in the ancient demefnes of the crown ; whence the tenure is denominated the tenure in ancient demefne.
(8.) Thefe copyholds of ancient demefne have divers immunities annexed to their tenure; but are ftill held by copy of court-roll, according to the cultom of the manor, though not at the will of the lord,
(9.) Frankalmoign is a tenure by fpiritual fervices at large, whereby many ecclefiaftical and eleemofynary corporationa now hold their lands and tenements; being of a nature diftinet from tenure by divine fervice in certain.

## Sect. VII. Of freebrild eftates of inberitance.

(1.) Estates in lands, tenements, and hereditaments, are fuch intereft as the tenant hath therein ; to afeertain which, may be confidered, 1. The quantity
of interefl. 2. The time of enjayment. 3. The number and connerions of the tenants.
(2.) Eftates, with refpect to their quantity of imperefl, or duration, are cither freelold, or lefs than frecholl.
(3.) A frechold eflate, in lands, is fuch as is created by livery of feifin at common law; or, in tenements of an inicorporeal nature, by what is equivalent thereto.
(4.) Freohold efates are either eflates of inheritance, or nct of inberitance, viz. for life only: and inberitances are, 1. Alfolute, or fee finple. 2. Limited fies.
(5.) Temant in fee fimple is he that hath lands, tenemente, or hecreditaments, to hold to him and his heirs for ever.
(6) Linimited fees are, 1. Qualifed, or lafe, fees. 2. Fees conditional at the eommon law.
(7.) Qualificd or bafe fees arc thofe which, having a qualification fubjoined chereto, are liable to be defeared when that qualificaion is at an end.
(8) Conditional fces, at the common law, were fuch as were granted to the donee, and the heirs of his bo$d y$, in exclufion of collateral heirs.
(9) Thefe were held to be fees, granted on conditiun that the donce had ifiue of his body; which condition being once perfornied by the birth ofififue, the donee might immediately aliene the land: but the flatute de clonis being made to prevent fuch alteration, thereupon from the divifion of the fee (by conftration of this Intute) into a particular eflate and a reverfion, the corditional fees began to be called fees tuil.
(10.) All tenements real, or favouring of the realty, are fubject to entails.
(11.) Elates tail may be, 1. gcneral, or fpecial; 2. male; or fenale : 3. given in frank marriage.
(12.) Incident to eftates tail are, 1. Walte. 2. Dower. 3. Curtefy. 4. Bar ;-by tine, recovery, or lireal warren:y with affts.
(13.) Iftates tail are now; by many flatuees and refolutions of the courts, almort brought back to the flate of conditional fees at the common law.

## Sect. ViiI. Of frecholds, not of inheritance.

(1.) Freernolds, not of inheritance, or for life only, are, 1. Convenional, or created by the act of the parties. 2. Legal, or created by operation of law.
(2.) Conventiokal eftates for life are created by an exprefs grant for tem of one's own life, or fur auter erve; or by a general grant, without exprefling any term at all.
(3.) Incident to this, and all other eflates for life, are eflovers, and emblements: and to ftates per cuter vie general occupancy was alfo incident; as feccial occupancy till is, if cffruy que vie furvives the tenant.
(4.) Legral eftates for iife are, 1. Tenancy in tail, afier poffility of inve extiric. 2. Tenancy by the curtefy of England. 3. Tenancy in dorver.
(5.) Tenancy in tail, after pefibility of iflue extimet, is where an eftate is given in fpecial tail ; and, before iffue had, a perfon dies from whofe body the iffue was to fpring; whereupon the tenant (if furviving) becomes tenart in tail, after poffilility of iflue extinct.
(6.) This eflate partakes both of the incidents to an eflate tail, and thofe of an eflate for life.
(7.) Tenancy by the curtefy of England is where a man's wife is feifed of an eftate of inheritance; and he by her bas iffue, born alive, which was capable of inheiting her ellate; in which cafe he flall, upon her death, hold the tenements for his own life, as tenant by the curtcfy.
(8.) Tenancy in dower is wherc a waman's huffand is feifed of an eftate of inheritance, of which her iffue might by any poffibility have been heir ; and the hufband dies: the woman is thercupou intitled to dower, or one third part of the lands and tenements, to hold for her natural life.
(9.) Dower is either by the common law; by feccial culom; act ofium ecelifia; or, ex affenfu patris.
(10.) Dower may be forfeited or barred, particularly by an eftate in jointure.

## Sect. IX. Of oflates lefs than frechold.

(1.) Estares lifs than freetohll are, 1. Efates for ycars. 2. EAlates at will. 3. Eltates at fuferanice.
(2.) An eflate for years is where a man, feifed of lands and tenements, letteth them to another for a certain periot of time, which transfers the interelt of the term; and the leffee enters thereon, whicl gives him poffefion of the term, brit not legal feifin of the
lan? lan 3.
(3.) Incident to this eflate are eflovers; and alfo emblements, if it determines before the full end of the term.
(4) An eftate at quill is where lands are let by ons man to another, to hold at the will of both parties; and the leffee entcrs thereon.
(5.) Copyblds are eltates held at the will of the lord, (regulated) according to the cultom of the manor.
(6.) An eltate at Jufcrance is where one comes into puffeifion of land by lawful title, but keeps it afterwardo without any title at all.

> Sect. X. of efotes upon condition.
(t.) Estates (whether freehold or otherwife) may alfo be held upon condition; in which cafe their exittence depends on the happening, or not happening, of fome uncertain event.
(2.) Thefe eftates are, 1. On condition implied. 2. On condition exprefyed. 3. Eftates in gage. 4. E. Rates by fatute, merchant or Itaple. 5. Eftates by elegit.
(3.) Elates on cordition implied are where a grant of an eftate has, from its effence and conftitution, a condition infeparably annexed to it; though none be exprefled in words.
(4.) Eltates on condition expreffed ate where an ex. prefs qualification or provifion is annexed to the grant of an eltate.
(5.) On the performance of thefe conditions eicher exprified or implied (if precelent) the eftate may be vefted or enlarged; or, on the breach of them (if fulf(quent) an eflate already velted may be defeated.
(6.) Ellates in gage, in vadio, or in pledge, are e. ftates granted as a fecurity for money lent; being, 452

1. $1 n$
fxx

Lxzii.

Law of England, epitumied.

1. In viva tadio, or iivins sage; where the profits of land are granted till a debt be paid, upon which plyment the granter's eftate will revive. 2. In mortuo radio, in dead, or mort gage; where an eftate is granted, on condition to be void at a day certain, if the gran. ter then repays the money borrowed; on failure of which, the eftate becomes abfolutely dead to the granter.
(7.) Eftates by flatute-merchant, or fatute-flaple, are alfo eftates conveyed to creditors, in purfuance of certain flatutes, till their profits fhall difcharge the debt.
(8.) Eflates by elegit are where, in confequence of a judicial writ fo called, lands are delivered by the fheriff to a plaintiff, till their profits fhall fatisfy a debt adjudged to be due by law.
isxiii. Sect. XI. Of eflates in poffeffion, remainder, and reverfion.
(I-) Estates, with refpect to their time of enjoyment, are either in immediate poffefion, or in expectancy; which eftates in expeanancy are created at the fame time, and ate parcel of the fame eftates, as thofe upon which they are expectant. Thefe are, 1. Kemainders. 2. Reverfions.
(2.) A remainder is an eftate limited to take effect, and be enjoyed, after another particular eftate is determined.
(3.) Therefore, 1. There muft be a precedent particular eftate, in order to fupport a remainder. 2. The remainder mult pafs out of the granter, at the creation of the particular eftace. 3. The remainder muft veft in the grantee, during the continuance, or at the determination, of the particular eftate.
(4.) Remainders are, 1. Vefted; where the eftate is fixed to remain to a certait perfon, after the particular eftate is fpent. 2. Contingent ; where the eflate is limited to take effect, either to an uncertain perfor, or upon an uncertain event.
(5.) An executory derife is fuch a difprition of lands, by will, that an eftate thall not veft thereby at the death of the devifor, but only upon fome future contingency, and without any precedent particular eftate to fupport it.
(6.) A reverfon is the refidue of an eftate left in the granter, to commence in poffeffion after the determination of fome particular eftate granted: to which are incident fealty, and rent.
(7.) Where two eftates, the one lefs, the other greater, the one in poffeflion, the other in expectancy, meet together in one and the fame perfon, and in one and the fame right, the lefs is merged in the greatcr.
ixxiv.
Sect. XII. Of eftates, in feveralty, joint tenancy, coparcenary, and common.
(I.) Estates, with refpect to the number and connertions of their tenarts, may be "held, I. In feveral1y. 2. In joint-tenancy. 3. In coparcenary. 4. In comnor.
(2.) An eflate in feverally is where one tenant holds it in his own fole right, without any other perfon being joincd with him.
(3.) Anctate in joint:tenan:y is where an eftate is granted to two or more perfons ; in which cafe the law condrues them to be joint-tenants, unlefs the words of the grant exprefsly exclude fuch, conftruction.
(4.) Joint-tenants have an unity of intereft, of title, of time, and of pofeffion : they are feifed per my \& per tout : and therefore upon the deceafe of one joint-tenant, the whole intereft remains to the furvivor.
(5.) Joint-tenancy may be diffolved, by deftroying one of its four conflituent anities.
(6.) An ellate in copurcenary is where an eftate of inheritance defcends from the anceftor to two or more perfons; who are called parceners, and all together make but one heir.
(7.) Parceners have an minity of interef, title, and poffetion; but are only feifed per my, and not per tout: wherefore there is no furvivorhip among parceners.
(8.) Incident to this eftate is the law of botchpot.
(9.) Coparcenary may alfo be diflolved, by deftroying any of its three conftituent unities.
(10.) Ari eftate in common is where two or more perfons hold lands, poffibly by ditinct titles, and for diflinet interefts; but by unity of poffeffion, becaufe none knoweth his own feveralty.
(11.) Tenants in conmon have therefore an unity of poffefion, (without furvivarfhip; being feifed per my, and not fer tout ;) but no neceffary unity of title, time, or interef.
(12.) This eftate may be created, 1. By diffolving the conflituent unities of the two former; 2. By exprefs limitation in a grant: and may be deftroyed, 1. By uniting the feveral titles in one tenant; 2. By partition of the land.

Sect. XIII. Of the title to things real, in geneueral.
(i.) A title to things real is the means whereby a man cometh to the jult poffeffion of his property.
(2.) Herein may be conlidered, 1. A mere or naked pofleffion. 2. The right of poffeffion; which is, $1 / l$, an apparent, 2 clly, an actual right. 3. The mere right of property. 4. The conjunction of actual poife ffion with both thefe rights; which conftitutes a perfect title. men anceftor.

## Secr. XIV. Of title by defcent.

( r ) The title to things real may be reciprocally acquired or lott, 1. By defent. 2. By purchafe.
(2.) Defient is the means whereby a man, on the death of his anceftor, acquires a title to his ellate, in right of reprefentation, as his beir at law.
(3.) To underfland the doctrine of defcents, we murt form a clear nation of confunguinity; which is the connection, or relation, of perfons defcended from the fame ftock or common ancettor; and it is, I. Lineal, where one of the kinfmen is lineally defcended from the other. 2. Cellateral, where they are lineally defcended; not one from the other, but both from the fame com-
(4.) The rules of defcent, or canons, of inkeritance, obferved by the laws of England, are thefe:
$1 /$, Inieritances Mall liseally defend to the ifue of
the perfon lat actually feifed, in infinitum; but fhall never lineally afcend.
$2 d$, The male iffue thall be admitted bufore the female. $3^{d}$, Where there are two or more males in equal degree, the clldflo only thall inherit; but the females all together.
$4^{t h}$, The lineal defcendants, in inf fitum, of any perfon deceafed fhall reprefont their anceftor; that is, fhall ftand in the fame place as the perfon himfelf would have done, had he been living.
5th, On failure of lincal defcendants, or iffue, of the perion laft feifed, the inheritance hall defcend to the blond of the friff purchafer ; fubject to the three preceding rules. To evidence which blood, the two following rules are eftablifhed.
6th, The collateral heir of the perfon lall feifed muft be his nest collateral kınfman, of the whbole hlood.
7 th, In collateral inheritances, the male focks fhall be preferred to the female; that is, kindred derived from the blood of the male anceflors fhall be admitted before thofe from the blond of the female : unlefs where the lands have, in fact, defeended from a female.
ivii. Sect. XV. Of title by purchafe, and firft by efcheat.
(t.) Purchase, or perquifition, is the poffeflion of an ettate which a man hath by his own act or agree. ment ; and not by the mere act of law, or defcent from any of his anceftors. This includes, 1. Efcbeat. 2. Occupancy. 3. Prefcription. 4. Forfeiture. 5. Alienation.
(2.) Efclieat is where, upon deficiency of the tenant's imberitable llood, the eftate falls to the lord of the fee.
(3.) Inberitable blood is wanting to, 1. Such as are not related to the perfon laft feifed. 2. His maternal relations in paternal inheritances, and vice verfa. 3. His kindred of the half blood. 4. Monflers. 5. Ballards. 6. Aliens, and their iffue. 7. Perfons attainted of treafon or felony. 8. Papifts, in refpect of themfelves only, by the fatute law.

## SEct. XVI. Of title by occupancy.

(i.) Occupancy is the taking poffefion of thofe things which before had no owner.
(2.) Thus, at the common law, where tenant pur auter vie died during the life of cefluy que rie, he, who could firft enter, might lawfully retain the poffefion; unlefs by the original grart the heir was madc a /pecial occupant.
(3.) The law of derelizions and alluvions has narrowed the title by occupancy.

## Sect. XVII. Of title by preforiftion.

(i.) Prescriftion (as diftinguifhed from cuflomn) is a perfonal inmernorial ufage of enjoying a right in forne incorporeal hereditament, ty a man, and either his anceftors or thofe whofe eftate of inheritance he hath: of which the finft is called prifcribing in lis ancefors, the latter in a que effate.

Sect. XVIII. Of title by forfciture.
(i.) Forfeiture is a punifhment annexed by law to fome illegal act, or negligence, in the owner of things real ; whereby the eftate is transferred to another, who is ufually the party injured.
(2.) Forfeitures are occafioned, 1. By crimes. 2. By alienation, contrary to law. 3. By lapfe. +. By fimony. 5. By nonperformance of conditions. 6. By zuafle. 7. By breach of copybold cufoms. 8. By bankruptey.
(3.) Forfeitures for crimes, or mifdemeanors, are for, 1. 'Treafon. 2. Felony. 3. Mifprifion of treafon. 4. Pramunire. 5. Affaults on a judge, and batteries, fitting the courts. 6. Popih recufancy, \&c.
(4.) Alienations, or conveyances, which induce a forfeiture, are, i. Thofe in mortmain, made to corporations contrary to the flatute law. 2. Thofe made to aliens. 3. Thofe made by particular tenanis, when larger than their eftates will warrant.
(5.) Lapfe is a forfciture of the right of prefentation to a vacant church, by neglet of the patron to prefent within fix kalendar months.
(6.) Simony is the corrupt prefentation of any one to an ecclefiallical benefice, whereby that turn becomes forfeited to the crown.
(7.) For forfeiture by nonperformance of conditions, fee Sect. 10.
(8.) Wafle is a fpoil, or deftruction, in any corporeal hereditaments, to the prejudice of him that hath the inheritance.
(9.) Copybold eftates may have alfo other peculiar caufes of forfeiture, according to the cullom of the manor.
(10.) Bankruptcy is the act of becoming a bank. rupt; that is, a trader who ferretes himfilf, or does certain other acts tending to defraud his creditors, (See Stect. 22.)
(11.) By bankruptey all the eftares of the bankrupt are transferred to the affignees of his commiifionets, to be fold for the benefit of his creditors.

## Sect. XIX. Of title by alienation.

(i.) Alienation, conveyance, or purchafe in its more limited fenfe, is a mcans of transferring real eftates, wherein they are voluntarily refigned by one man, and accepted by ansther.
(2.) This formerly could not be done by a tenant, without licence from his lord; nor by a lord, without attornment of his tenant.
(3.) All perfons are capalic of purchafing; and all that are in poffeffion of any eflates, are capable of conveying them: unlefs under peculiar difabilities by law; as being attainted, non compotes, infants, under dureis, feme-coverts, aliens, or papilts.
(4.). Alienations are made by common affurances; which are, 1. By deed, or matter in pais. 2. By matter of record. 3. By fpecial cuflom. 4. By devife.

## Sect. XX. Of alienation ly deed.

(1.) In affurances by deed may be confidered, I. Its gentral nature. 2. Its feneral Species.
(z.) A deed, in generul, is the folemn act of the \& parties:.
parits : heing ufually a writing fealed and delivered; and it may be, 1. A deed indented, or indenture. 2. A deed poll.
(3.) The requifites of a deed are, 1. Sufficient parties, and proper fitbjeq-matter. 2. A gnod an 1 fufficient confileration. 3. Writing on paper, or parchment, duly flamped. 4. Legal and orderly parts: (which are ufually, Ift, the prenifes; 2dty, the balendun; 3 dy, the tenendum; thly, the redidndam; sthly, the couditions; othly, the warranty, which is cither lineal or collateral: fthly, thic covenants; Sthly, the con. clufion, which includes the date). 5. Reading it, if defired. 6. Sualing, and, in many cafes, figning it alfo. 7. Detivery. (3. Alteflation.
(4.) A deed may be avoidet, 1. By the want of any of the requifites before-mentioned. 2. By fubfequent matter; as, Ift, Rafure, or alteration. 2dly, Defacing its feal. $3^{\mathrm{dty}}$, Cancelling it. 4thly, Difagreement of thofe whofe confut is neceffary. 5 thly, Judgment of a count of juttice.
(5.) Of the feveral./pecies of deeds, fome ferve to convey real property, fome only to charge and difcharge it.
(6.) Deeds which ferve to convey real property, or convegunces, are either by common lase, or by fatute. And, of convejances by common law, fome are original or pinaly, others derivative or fecondary.
(7.) Original conveyances are, 1. Feoffinents. 2. Gifis. 3. Grants. 4. Leafes. 5. Excbanges. 6. Partitions. Derivedive are, 7. Relcafes. 8. Confirmations. 9. Surrenders. 10. Affighments. 11. Defeazauces.
(8.) A feoffinent is the transfer of any corporeal hereditament to anothicr, perfected by livery of frifin, or delivery of bodily polleilion from the feoffer to the feoffer: without which no freehold eftate therein can be created at common law.
(9.) A siji is properly the conveyance of lands in tail.
(10.) A grant is the regular method, by common law, of conveying incorporeal hereditaments.
(11.) A leafe is the demife, granting, or lettińg to farm of any tenement, ufually for a lefs term than the leflor hath therein ; yet fometimes poffibly for a greater; accordiug to the regulations of the reftraining and enabling ftatutts.
(12.) An cactiange is the mutual conveyance of equal intercits, the one in confideration of the other.
(13.) A partition is the divifion of an ellate held in joint-tenancy, in coparcenary, or in comninn, between the sefpective tenants; fo that each may hold his diftinet part in feveralty.
(14.) A relicufe is the difcharge or conveyance of a man's right, in lands and tenements, to another that hath fome former eflate in poffelfion therein.
(15.) A confrmation is the cenveyance of an eflate or right in effe, whereby a voidable eftate is made fure, or a particular eftate is increafed.
(16.) A furrender is the yielding up of an eftate for life, or years, to him that hath the immediate temainder or rcverlion; wherein the particular effate may inerge.
(17.) An afignment is the transfer, or making over to another, of the whole tight one has in any eltate; but ufually in a leafe, for life or years.
(18.) A defenzance is a collateral deed, made at the fame time with the original conveyance; contain-

WV.
ing fome condition, upon which the eftate may be de-
feated. reated.
(19.) Conveyances by flotute depend much on the doctrine of ufes and trufs: which are a confidence repofed in the terre tenant, or tenant of the land, that he flaall permit the profits to be enjoyed, according to the direrions of cefluy que ufe, creffuy que triff.
(20.) The ftatute of mifes, baving transferred all ufes into actual pofieflion, (or, rather, having drawn the puffelfion to the ufe), has given birth to divers nther fpecies of conveyance: 1. A cosenant to fland feifed to ufe. 2. A barorain and fule, enrulled. 3. A lenfe and releafe. 4. A deed to lect or decture the ufe of other inore direet conveyances. 5. A revocalion of ufes; being the execution of a power, referved at the creation of the ufe, of recalling at a future time the ufe or eftate fo creating. All which owe their prefent 0 peration principally to the llatute of ufes.
(2 i.) Deeds which do not conveg, Lint only charge real property, and difcluarge it, are, 1. Obligations. 2. Recognizances. 3. Defeazances upon both.

## Slect. XXI. Of alienation by matter of recerd.

(1.) Assurances hy matter of record are where the fanction of fome court of record is called in, to fubftantiate and witnefs the transfer of real property. 'Theie are, 1. Private aifs of parlianent. 2, The king's grants. 3. Fines. 4. Conmon recoveries.
(2.) Private atis of parliament are a fpecies of affurances, calculated to give (by the tranfcendent autthority of parliament) fuch reafon:ble powers or relief as are beyond the reach of the ordinary courfe of law.
(3.) The king's grants, contained in chateers or letters patent, are all entered on record, for the dignity of the royal perfon, and fecurity of the royal revenue.
(t.) A fine (fometimes faid to be a feoffment of record) is an amicable compofition and agreement of an actual, or fictitious, fuit; whereby the eftate in queftion is acknowledged to be the right of one of the parties.
(5.) The parts of a fine are, 1. The writ of covenant. 2. The licence to agree. 3. The concond. 4. The note. 5. The foot. To which the flatute hath added, 6. Proclamations.
(6.) Fines are of four kind's: 1. Sur cognizance de droit, conie cen que il ad de fon done. 2. Sur connizante de droit tantum. 3. Sur conceffit. 4. Sur done, grant, et remerer; which is a double line.
(7.) The force and effet of fines (when levied by fuch as have themfelves any intereft in the eftate) are to affure the lands in queftion to the cognizee, by barring the refpective rights of parties, privies, and firangers.
(8.) A common recovery is by an actu3l, or fictitons, fuit or action for land, brought againft the tenant of the freehold; who therenpon vouches another, who undertakes to warrant the tenant's title: hut, upon fuch vouchee's making default, the land is recovered by judgment at law againt the tenant; who, in return, obtains judgnent againf the vouchec to recover lands of equal value in recompenfe.
(9.) The force and effect cf a recovery are to aflure
of lands to the recoverer, by barring eftates tail, and all remainders and reverfions expectant thereon; provided the temant in tail cither fuffers, or is vouched in, fuch recovery.
( 10 ) The ufes of a fine or recovery may be directed by, I. Deeds to lead fuch ufes; which are matle previons to the levying or fuffering them 2. Deeds to ceclare the ufes; which are made fublequeri.

Sect. XXII. Of alienation by fpecial cuftom.
(1) Assurances hy fpecial cuffon are confined to the tranafer of copybohl eitates.
(2.) This is effected hy, 1. Surrender by the tenant into the hands of the lord to the we of another, accoring to thic cuitom of the manor. 2. Prefentment, by the tenants or homage, of fuch furrender. 3 Ad . mittance of the furrenderee by the lord, according to the ufes exprefed in fuch furiender.
(3.) . idmittarce inay alio be had upen origrinal grants to the tenant from the lord, and upon dejecnts to the heir from the ancelur.

## Sect. NXIII. Of alicnation by devijc.

(r.) Devise is a difpofition of lands and tenements, contained in the laft will and teflament of the owner.
(2.) This was not permitted by the common law, as it flood fince the conguert; but was introduced by the fatute law, under Henry VIII. fince made more univerfal by the flatute of tenures under Charles II. with the introduction of additional folemnities by the ftatute of frauds and perjuries in the fame reign.
(3.) The confrusion of ail common affurances fhould be, 1. Agreeable to the intention. 2. To the words of the parties. 3. Made upon the entire deed. 4. Bearing Atrongell againit the contractor. 5. Conformable to law. 6. Rejecting the later of two totally repug. mant claufes in a deed, and the former in a will. \%. Hott favourable in cafe of a devife.

## Sect. XXIV. Of things perjonal.

(1.) Things perfonal are comprehended under the gencral name of chattels; which includes whatever wants either the duration, or the immobility, attending things real.
(2.) In thefe are to be confidered, I. Their dijtribution. 2. The property of them. 3. The fitle to that property.
(3.) As to the diftribution of chattels, they are, 1. Chattels real. 2. Chattels perfonal.
(4.) Chatels real are fueh quantities of intcreft, in things immoveable, as are thore of the deration of freeholds ; being limited to a rime certain, beyond which they cannot fubtif. (See Sect. 7.)
(5.) Chattels perfonal are things moveable; which may be transferred from place to place, together with the perfon of the osner.

Secr. XXV. Of property in things perfonal.
(1.) Property, in chattels perfonal, is either in pof. fifion, or in alion:
(2.) Properiy in pofeffion, where a man bas the actual enjoyment of the thing, is, 1. Mbolute. 2. © Oualifed.
(3.) Absolute property is where a man has fuch an exclufive right in the thing, that it cannot ceafe to be his, without his own act or default.
(t.) Qualifed property is fuch as is not, in its na. ture, permanent ; but may fometimes كubfilt, and at o:her times not fubfilt.
(5.) This may arife, t . Where the fubject io incapable of abfulute ownerthip. 2. From the peculiar circumftances of the owners.
(6.) Property in action, is where a man hath not the actual occupation of the thing; but only a riybt to it, ariling upon fome contraEt, and recoverable by an action at law.
(7.) The property of ehattels perfonal is liable to remainders, expectant on ellates fur life; to joint-tenancy; and to tenancy in common.

## Sect. XXVI. Of title to ibings perfonal by occupancy.

(1.) The title to things perfonal may be acquired or lut by, 1. Occupuncy. 2. Prorogative. 3. Forfecture. 4. Cufom. 5. Siccefion. 6. Narriage. 7. Judge ment. 8. Gift, or grant. 9. Contract. 1o. Bankruptcy. It. Tefament. 12. Adminiflration.
(2.) Occupancy ftill gives the firlt occuoant a right to thofe few things which have no legal owner, or which are incapable of permanent ownerthip. Such as, 1. Goods of alien enemies. 2. Things found. 3. The benefit of the element3. 4. Animals fora natura. 5. Emblements. 6. Things gained ty acceffion; or, 7. By confufion. 8. Literary property.

## SEct. XXVII. Of title by prorogative, and forfeiturc.

(1.) By prerogative is velted in the crown, or its grantees, the property of the royal revenue, (fee Chap. I. Sect. 8.) ; and alfo the property of all game in the kingdom, with the right of purfuing and taking it.
(2.) By forfeiture, for crimes and mirdemeanors, the right of goods and chattels may be tranferred from one man to another; either in part or tntally.
(3.) Total forfuitures of goods anife from convition of, 1. Treafin, and mifprilion thereof. 2. Felony. 3. Excufable homicide. 4. Outlawry for treafon or felony. 5. Flight. 6. Standing mute. \%. Afrauh on a judge; and batteries, fitting the courts. \& Premunice. 9. Pretended prophecies. 10. Owling, it. Refiding abroad of artificers. 12. Challanges to fight, for debts at play.

## Sect. XXVIIT. Of title by culom.

(1.) Dy cuflom, ob:aining in particular places, a right may be acquired in ehattels: the noof ufual of which cuftoms are thofe relating to, I. Heriots. 2. Mortuaries. 3. Heir looms.
(2.) Heriots are either heriot-firvice, which differs litile from a rent; or heriot cuilom, which is a cultomary tribute, of goods and chattels, payable to the lord of the fee on the deceafe of the owner of lands.
(3.) Mortuaries are a cuftomary gift, due to the miniter in many parifhes, on the death of his pasinioners.

Law of England, $\underbrace{\text { epitomuse. }}$
(1.) Bankruptcy (as defined in Sect. 18.) is the
(1.) BY fuccefion the right of chattels is vefted in corporations aggregate; and likewife in fuch corporations fole as are the heads and reprefentatives of bodies aggregate.
(2.) By marriage the chattels real and perfonal of the wife are velted in the hußband, in the fame degree of property, and with the fame powers, as the wife *when fole had over them; provided he reduces them to poffeffion.
(3.) The wife alfo acquires, by marriage, a property in her own parapbernalia.
(4.) By judgment, confequent on a fuit at law, a man may in fome cafes, not only recover, but originally acquire, a right to perfonal property. As, 1. To penalties recoverable by action popular. 2. To danages. 3. To cofts of fuit.
raii. Sect. XXX. Of title by gift, grant, and contract.
(1.) A gift, or grant, is a voluntary conveyance of a chattel perfonal in poffeffion, without any confideration or equivalent.
(2.) A contrail is an agreement, upon fufficient confideration, to do or not to do a particular thing: and, by fuch contract, any perfonal property (either in poffeffion or in action) may be transferred.
(3.) Contracts may either be exprefs or implied; either executed or executory.
(4.) The confideration of contraits is, I. A good confideration. 2. A valuable conlideration; which is, 1. Do, ut des. 2. Facio, ut facias. 3. Facio, ut des. 4. Do, ut facias.
(5.) The mott ufual Species of perfonal contrats are, 1. Sale or exchange. 2. Bailment. 3. Hiring or iorrowing. 4. Debt.
(6.) Sale or exchange is a tranfmutation of property from one man to another, in confideration of fome recompenfe in value.
(7.) Bailment is the delivery of goods in truft; upon a contract, exprefs or implied, that the truft fhall be faithfully performed by the bailee.
(8.) Hiring or borrowing is a contract, whereby the poffefion of chattels is transferred for a particular time, on condition that the identical goods (ur fometimes their value) be reftored at the time appointed: together with (in cafe of biring) a ftipend or price for the ufe.
(9.) This price, being calculated to anfwer the hazard as well as inconvenience of lending, gives birth to the doctrine of interef, or $u f u r y$, upon loans; and, confequently, to the doctrine of lottomry or refpondentia, and infurance.
(10.) Debt is any contract, whereby a certain fum of money becomes due to the creditor. This is, I. A debt of record. 2. A debt upon Jpecia! contract. 3. A debt upon fimple contract ; which laft includes paper credit, or billd of exchange, and promifory notes. N176.
att of becoming a bankrupt.
(2.) Herein may be confidered, 1. Who may become a bankrupt. 2. The afts whereby he may become a bankrupt. 3. The proceedings on a commiffion of banbrupt. 4. How his property is transferred thereby.
(3.) Perfons of full age, $u$ fing the trade of merchandize, by buying, and felling, and feeking their livelihood thereby, are liable to become bankrupts; for debts of a fufficient amount.
(4.) A trader, who endeavours to aveid his creditors, or evade their juit demands, by any of the waya fpecified in the feveral ftatutes of bankruptcy, doth thereby commit an aft of bankruptcy.
(5.) The proceedings on a conmifion of bankrupt, fo far as they affect the bankrupt himfelf, are principally by, 1. Petition. 2. Commiffion. 3. Declaration of bankruptcy. 4. Choice of aflignees. 5. The bankrupt's furrender. 6. His examination. 7. His difcovery. 8. His certificate. 9. His allowance. 10. His indemnity.
(6.) The properiy of a bankrupt's perfonal eflate is, immediately upon the act of bankruptcy, vefted by confruction of law in the affignees: and they, when they have collected, diftribute the whole by equal dividends among all the creditors.

## Sect. XXXII. Of title by teftanent, and adminiflration.

(1.) Concerning teffaments and adminifrations, confidered jointly, are to be obferved, 1. Their original and antiquity: 2. Who may make a teftament. 3. Its nature and incilents. 4. What are executors and adminiftrators. 5. Their office and duty.
(2.) Teftaments have fublifted in England immeniorially ; whereby the diceafed was at liberty to difpofe of his perfonal eftate, referving anciently to his wife and children their reafonable pari of his effects.
(3.) The goods of inteffates belonged anciently to the 'king; who granted them to the prelates to be difpofed in pious ufes : but, on their abufe of this trult in the times of popery, the legiflature compelled them to delegate their power to adminiftrator's exprefsly provided by law.
(4.) Ail perions may make a teftament unlefs difabled by, 1. Want of difcretion. 2. Want of free-will. 3. Criminal conduet.
(5.) Teflaments are the legal declaration of a man's intentions, which he wills to he performed after his death. Thefe are, I. Written. 2. Nuncupative.
(6.) An executor is he, to whom a man by his will commits the execution thereof.
(7.) Adminifrators are, I. Durante minore ctate of an infant executor or adminititrator : or durante abfentia: or pendente lite. 2. Cum teflimento unnexo; when no executor is named, or the exccu:or reilifes to act. 3. General adminil? rators; is purfuance of the thatutes of Edward III. and Henry VIII. 4. Adminiftrators de bonis non; when a former executor or adminiftrator dies without completing his truf.
(8.) The office and duly of exccutore (and, in many points, of adminifrators alfo) are, 1 , To bury the decealed. 2, To prove the will, or take out adminio Aration. 3. To make an inventory. 4. To collect the goods and chattela. S. To pay debta; obferving the rules of priority. 6. To pay legacieq, either general or Specific ; if they be velted, and not lapfed. \%. To diftribute the undevifed furplus, according to the fatute of dittributiona.

## CHAP. MI.

## of Privatr Wrongs.

## Sect. I. Of the redrefs of private wrongs, by the mere all of the parties.

(1.) $W^{\text {Ronas are the privation of right ; and are, }}$ 1. Private 2. Public.
(2.) Prinate qurongs, or civil injuries, are an ln fringement, or privation, of the civil rights of individuals, confidered as individuals.
(3.) The relrefs of civil injuries is one principal object of the lawe of England.
(4.) This redrefs is effected, 1, By the mere ate of the partics, 2. By the mare operation of lazu. 3. By both together, or fuit in couris.
(5.) Redrefr, by the mere af of the parties, is that which arifes, f. From the fole aed of the party injured. 2. From the joint at of all the parties,
(6.) Of the firf fort are, 1. Defence of one's felf, or relatione. 2. Recaption of goods. 3. Entry on lands and renementa. 4. Abatement of nulances, 5. DiArefa; for rent, for fuit or fervief, for amercements, for damage, or for divers itatutable penalties s-made of fuch thinge only as are legally ditrainable :-and taken and dilpofed of aceording to the diae courfe of Lav. 6. Seifing of heriots, 然定.
(7.) Of the fecond fort aie, 1. Accord. 2. Arbie tration.

## Secr. II. Of redrefs by the mere operation of law,

RFMERGE, effected by the mere opiration of law, is, 3. In the cafe of rtainer , where a creditor is executo or adminitrator, and is thereupon allowed to retain his ox"l debe. 2. In the caie of rempition; where one, who has a good tille io lands, \&c. comes into poffer font by a bad one, and is thereupon remited io hiq ancient good fitls, which protecta his itb acquired poro feffion.

## Secr. III. of courts in general.

(1.) Represf, that is efitefted by the aid both of low and of the parties, is by fuit or whiton in the courts of juftice.
(2.) Hercin may he confideral, 1, The conde themfelves. 2. The cognizanco of wronge or injories therc-
 2. The: Several/proies.
(3) As oume is a phace wherein juntice is juacicially puminithered, lyy offeere drfegated by the crown; be iog a coorr either of record, or not of recond.
(4) inmidhe to al: cours bre a plaintifl, defendant, gnd jusez': and, wih us there are allo ufually attor: Vob. ľ, Part IK,
neys; and advocates or counfel, wiz. sithor barrilters or ferjeants at law.

## Law of

 England, epltonifed.Sect. IV, Of the public courts of common law and acviin equity.
(1.) Covrts of juftice, with regard to their ieveral species, are, 1. Of a public, or general, jurifdiction throughout the realm. 2. Of a private, or fpecial, jurifdiction.
(2.) Public courts of juftice are, 1. The courte of common lazu and equity. 2. The ecclefiafical courta, 3. The military courts. 4. The maritime courts,
(3.) Theygeneral and public courts of common lane and equity are, 8 . The court of piepoudre, 2. The court-baron. 3. The hundred court. 4. The county court. 5. The court of comman pleas. 6. The coure of king's bench. \%. The court of exchequer. 8. The court of chancery. (Which two laft are courts of ev quity as well as lawu). 9. The courts of exchequer. chamber, ro. The houle of peers. To which may be added, as auxiliaries, 11 . The courte of affize and nif prius.
SEct. V. Of courts ecclefiafical, military, and maritime.
(a,) Ecclesiastical courts (which were feparated from the lemporal by William the Conqueror), or courts Chripian, are, 1 . The court of the archdeacon. 2. The courk of the bifhop'a confillory, 3. The court of arches. 4. The court of peculiars, 5. The prengative court. 6. The court of delegates. \% The court of review.
(2.) The only permanent military court is that of chivalry ; the courte martial, annually eftablifhed by net of parliament, being only temporary,
(3.) Maritime courts are, 1. The court of admi. ralty and vice admiralty, 2. The court of delegates, 3. The lord of the privy council, and others, authas rifed by the king's commiffion, for appeals in prize. свиfeв.

## Sect. YI. of courts of a feccial jurifiction.

Courre of a fipecial or private jurídiction arc, 1. The forell courta : including the coures of attacho monts, regard, fwiewmote, and fultice feat. 2. The court of commiflioners of fewera. 3. The couit of policies of affurance, 4. The court of the marfalfea and the palace court. 5. The courts of the principality of Wales, 6. The court of the duchy chamber of Lancaler, $\%$. The courts of the countica palatine, and other royal franchifes. 2. The fannery courts. 9. The courts of Loondon, end other corporations:-To which may be referreal the courta of requefty or court of confcience: and the mode:n regulations of certain courta baron and county courts. 10 . The coutz of the two univertitics.

Sser. VII. Of the cegnifance of private wrengs.
(1.) Anc private wrongs or civil injurics are cognifable tirhe in the courts ecciefiafical, military, naritime, or thofe of common darw.

$$
\begin{equation*}
4 \mathrm{~L} \tag{2.}
\end{equation*}
$$

(2.) Iujuries cognifable in the ccclefiafical courts are, 1. Pecumiary. 2. Matrimonial. 3. Teflamentary.
(3.) Pecuniary injuries, here cognifable, are, 1. Subtracion of tithes. For which the remedy is by fuit to compel their payment, or an equivalent; and alfo their double value. 2. Nonpayment of ecclefiaftical dues. Remedy: by fuit for payment. 3. Spoliation. Remedy: by fuit for reftitution. 4. Dilapidotions. Remedy: by fuit for damages. 5. Non-repair of the church, \&c.; and non-payment of church-rates. Remedy : by fuit to compel them.
(4.) Matrimonial injuries are, 1. Faatitation of marsiage. Remedy: by fuit for perpetual filence. 2. Subtraation of conjurol rights. Remedy : by fuit for reflitution. 3. Inabilily for the marriage Itate. Remedy : by fuit for divorce. 4. Refufal of decent maintezance to the wife. Remedy : by fuit for aliniony.
(5.) Tefumentary injuries are, I. Difputing the validity of suills. Remedy: by fuit to ettablifh them. 3. Obflruating of alminij/rations. Remedy: by fuit for the granting them. 3. Subiracion of legacies. Remedy: by fuit for the payment.
(6.) The courfe of proceedings herein is much conformed to the civil and canon law : but their only compulfive procefs is that of excommunication; which is enforced by the temporal writ of Jignificavit, or de excommunicato capiendo.
(7.) Civil injuries, cognifable in the court military, or court of chivalry, are, 1. Injuries in puint of bosour. Remedy: by fuit for honourable amends. 2. Encroachments in coat-armour, \&c. Remedy: by fuit to remove them. The proceedings are in a fummary method.
(8.) Civil injuries cognifable in the courts maritime, are injuries, in their nature of emmon-law cognifance, but arifing wholly upon the fea, and not within the precincts of any connty. The proceedings are herein alfo much conformed to the civil law.
(9.) All other injuries are cognifable only in the conrts of conmon lawe : of which in the remainder of this chapter.
(10.) Two of them are, however, commiffible by thefe and other inferior courts; viz. 1. Refufal, or neglea, of jufice. Remedies: hy writ of procedendo, or mandamas. 2. Encroachment of jurifdiation. Reme$d y$ : by writ of prohibition.
wis. Sect. VIII. Of wrengs, and their remedies, respecting the rights of perfons.
(I.) In treating of the cognifance of injuries by the courts of conmon law, may be confidered, 1 . The injuries themfelves, and their refpective remedies. 2. The purfuit of thofe remedies in the feveral courts.
(2.) Injuries between fubject and fubjett, cognifable by the courts of common law, are in general remedicd by putting the party injured into poffefion of that right whereof he is unjuftly deprived.
(3.) This is effected, 1. By delivery of the thing detained to the rightful owner. 2. Where that remedy is either impoffible or inadequate, by giving the party injured a Jatisfation in damages.
(4.) The inftruments, by which thefe remedies may be obtained, are fuits or actions; which are defined to
be the legal demand of one's right: and thefe are, 1. Perfonal. 2. Real. 3. Mixed.

Law
(5.) Injuries (whereof fome are with, others without, force) are, 1. Injuries to the rights of perfons. 2. Injuries to the rights of property. And the former are, 1. Injuries to the abjolute. 2. Injuries to the relative, rights of perfons.
(6.) The abfolute rights of individuals are, 1. Perfonal fecurity. 2 Perfonal liberty. 3. Private property: (See Chap. I. Sect. 1.). To which the injuries mult be correfpondent.
(7.) Injuries to perfonal fecurity are, 1. Againtt a man's life. 2. Agaiuft his limbs. 3. Againt his body. 4. Againft his bealtb. 5. Againit bis reputation.The firlt mult be referred to the next chapter.
(8.) Injuries to the limbs and body, are, I. Threats. 2. Aflault. 3. Battery. 4. Wounding. 5. Maybem. Remedy : by action of trefpais, viet armis; fur damages.
(9.) Injuries to bealth, by ańy unwholefome practicts, are remedied by a feecial action of trefpafs, on the cafe; for damages.
(10.) Injuries to reputation are, 1. Slanderous and malicious suords. Remedy: by action on the cafe; for damages. 2. Libels. Remedy : the fame. 3. Maliciuus profecutions. Remedy: by action of confpiracy, or on the cafe; for damages.
(11.) The fole injury to perfonal liberty is falfe insprijonment. Remedies: 1. By writ of, ift, Mainpuze; 2 dly , Odio et atia; 3 dly, Homine replegiando. $4^{\text {thly }}$, Habeas corpus ; to remove the wrong. 2. By action of trefpafs; to recover damages.
(12.) For injuries to private property, fee the next fection.
(13.) Injuries to relative rights affect, s. Hufbands. 2. Parents. 3. Guardians. 4. Maflers.
(14.) Injuities to an bubband are, 1. Abduation, or taking away his wife. Remedy : by action of trefpafs, de uxare rapta at alduta; to recover poffeflion of his wife, and damages. 2. Criminal converfation with her. Remedy: by action on the cafe; for damages. 3. Beatings her. Remedy: by action on the cafe, per quod confortium amift ; for danages.
(15.) The only injury to a parent or guardian is the abduation of their children or wards. Remedy: by action of trefpafs, de filiz, vel cuflodius, raptis vel abductis; to recove! poffefion of them, anil damages.
(16.) Injuries to a mafter are, 1. Retaining his fervants. Remedy : ty action on the cafe; for damages. 2. Beating them. Remedy : by action on the cafe, per quod fervitium amifit; for damages.

## Sect. IX. Of injuries to perfonal property.

(I.) Injuries to the rights of praperty are either to thofe of perfonal or real property.
(2.) Perfonal property is cither in poffefron or in adion.
(3.) Injuries to perfonal property in poffeffion are, 1. By difpofeffion. 2. By damage, while the owner remains in pulfeffion.
 itking. 2. By an unlawful detaining.
(.5.) For the unlawful taking of goode and chattels perfonal,
ticular ellate of freelold is determined, before him in remainder or reverfion.
(6.) Difcifin is a wrongful putting out of him that is reifed of the frechold.
(7.) Difgontinuance is where tenant in tail, or the husband of tenant in fee, makes a larger eftate of the land than the law alloweth.
(8.) Deforcement is any other detainer of the free. hold from him who hath the property, but who never had the poffeffion.
(9.) The univerfal remedy for all thefe is rellitution or delivery of poffeffion ; and, fometimes, damages for the detention. This is effected, J. By mere entry. 2. By action pofffory. 3. By writ of right.
(10.) Mere entry, on lands, by him who hath the apparent right of poffeffion, will (if peaceable) diveft the mere polefion of a wrongdoer. But forcille entrica are remedied by immediate reltitution, to be given by a juftice of the peace.
(11.) Where the wrongdoer hath not only mere porfeffion, but alfo an apparent right of poffeffion, this may be develted by him who hath the actual right of poffeffion, by means of the folfeffory actions of zurit of entry or affife.
(12.) I writ of entry is a real action, which difproves the title of the tenant, by fowing the unlawful means under which he gained or continues poffeffion. And it may be brought either againft the wiongdoer himfelf, or in the degrees called the per, the per and cui. and the pofl.
(13) An alfie is a real aftion, which proves the title of the demandant, by fhowing his own or his auceltor's poffeffion. And it may be brought either to remedy abatements; viz the affife of mort d'anceflor, \&cc.: Or 10 remedy recent diffeifins; viz. the aflife of novel diffifin.
(1+) Where the wrongdoer hath gained the actoal right of poffefforn, he who hath the right of property can only be remedied by a writ of right, or fome writ of a limilar nature. As, 1. Where fuch right of poffeffion is gained by the difcontinuance of tenant in tail. Remedy, for the light of property : by writ of formedon. 2. Where gained by recovery in a poffeffory action, had againlt tenants of particular eftates by their own default. Remedy: by writ of quod ei deforceat. 3. Where gained by recovery in a poffeffory action, had upon the merits. 4: Where gained by the fatute of limitations. Remedy, in buth cafes: by a mere writ of right, the higheit writ in the law.

Sect. XI. Of difpofefion, or oufer, of chatiels
(1.) Ouster from chattels real s, 1. From eftates by flatute and elegit. 2. From an eftate for years.
(2.) Ouiter from eltates by fatule or elegit, is effeeted by a kind of diffifin. Remedy: reftitution and damagts; by affife of novel dilfeifin.
(3) Onfter from an eftate tor years, is effected by a like difteifin, or cjellment. Remedy: reftitution, and damages; I. By writ of ejectione firme. 2. By writ of quare ejecit infra terminum.
(4.) A writ of ejeatione firma, or action of trefpafs in ejectment, licth where lands, \&ic. are let for a term of years, and the leffee is oofted or ejected from his ${ }_{4} \mathrm{~L} 2$
term;
replevin. 3. Satisfaction in damages: $1 / A$, in cafe of refcous, by action of refcous, poundbreach, or on the cafe: 2 dly, in cafe of other unlawful takings, by action of trefpafa or trover.
(6) For the unlawful detaining of goods lawfully taken, the remedy is alfo, 1. Actual reflitution; by actiou of replevin or detinue. 2. Satisfaction in damages : by action on the cafe, for trover and converfion.
(7.) For damage to perfonal property, while in the owner's poffelion, the remedy is in damages ; by action of trefpats wi et armis, in cafe the act be immedi ately injurioua; or by aetion of trefpafs on the cafe, to redrefs confequential damage.
(8.) Injuries to perfonal property, in alion, arife by breach of contrals, 1. Exprefs. 2. Implied.
(9.) Breaches of exprefo contracts are, 1. By non. payment of debts. Remedy: $1 / 2$, Specific payment; recoverable by action of debt. zdly, Damages for nonpayment ; recuverable by action on the cafe. 2. By nonperiormance of covenants. Remedy: by action of cuvenant, $1 / 2$, to recover damages, in covenants perfonal: idly, to compel performance, in covenants real. 3. By nonperformance of pronifes, or afumpfits. Remedy : by artion on the cafe; for damages.
(10.) Inplied contracts are fuch as arife, 1. From the nature and confitution of government. 2. From reafon and the conftruction of law.
(1I.) Buaches of contracts, implied in the nature of government, ate by the nonpiajincont of money which the laws have directed to be paid Remedy: by action of debt (which, in fuch cafes, is frequently a popular, frequently a qui tam, action) : to compel the fpecific payment;--or, fometimes, by action on the cafe; for damages.
(12.) Breaches of contracts, implied in reafon and conflroction of law, are by the nonperformance of legal prefumptive afumpfiss: for which the remedy is in damages; by an action on the cafe on the implied affumpfits, 1. Of a quantum meruit. 2. Of a quantum valebat. 3. Of money expended for another. 4 Of rectiving money to another's ufe. 5. Of an infimul computuffint, on an account ftated (the remedy on an account unflated being by action of account). 6. Of performing one's duty, in any employment, with integrity, diligence, and Mill. In fome of which cafes an action of deceit (or on the cafe, in nature of deceit) will he.
iv. Secr. X. Of injuries to real property; and, firf, of di/polfefion, or oufler, of the freehold.
(1.) Injuries affecting ,eal property are, I. Oufler. 2. Trefpafs. 3. Nufance. 4. Wafle. 5. Suberadion. 6. Diflurbance.
(2.) Ouffer is the amotion of poffeffion; and is, 1. Fro freebolds. 2. From cbattels real.
(3.) Outter from freebolds is effected by, 1. Alatement. 2. Intrufion. 3. Dijfífin. 4. Difontinuance. 5. Deforcement.
(4.) Abatement is the entry of a flranger, after the death of the anceitor, before the heir.
(5.) Intrufion is the entry of a ftranger, after a par-

Law of term : in witheh cafe he foll recover poffefion of hia Pegland, epiromifed term, apd damages.
(5.) This is now the ufual method of trying titles to land, inflead of an action real : viz. By, 1. The claimant's making an actual (or fuppofed) leafe upon the land to the plaintiff. 2. 'The plaintiff's actual (or fuppofed) entry thereupon. 3. His actual (or fuppofed) outher and ejectment by the defendant. For which injory this action is brought either againf the tenant, or (more ufually) againft fome cafual or fictitious ejector; in whofe flead the tenant may be admitted defendant, on condition that the leale, entry, and oufter, be confeffed, and that nothing elfe be difputed but the merits of the title claimed by the deffor of the plaintiff.
(6.) A writ of quare ejecit infra terminum is an action of a fimilar nature; only not brought againt the wrongdoer or ejector himfelf, but fuch as are in poffuffion under his title.

## Sect. XIV. Of wafte.

(1.) Waste is a fpoil and deftruction in lands and tenements, to the injury of bim who hath, I. An immediate interef (as, by right of common) in the lands. 2. The semainder or reverfion of the inheritance.

(3.) The remedy, fur him in remainder, or reverfion, is, 1. Preventive: by writ of efrepement at law, or injunction out of chancery; to ftay wafte. 2. Corrective: by action of wafte; to recover the place wafted, and damages.

## Sect. XV. Of fubtraclion.

(b) Subtraction is when one, who owes fervices

## Sect. XVI. Of difurbance.

(1.) Disturbance is the hindering, or difquieting, the owners of an incurporeal hereditament, in their regular and lawful enjoyment of it
(2.) Ditturbances are, 1. Of franchifes. 2. Of commons. 3. Of ways. 4. Of tenure. 5. Of patronage.
(3.) Difturbance of franchifes, is remedied by a fpecial action on the cafe; for damages.
(4.) Difturbance of common, is, I. Intercommoning without right. Remedy: Damages; by an action on the cafe, or of trefpafs: befides diltrefs, damage feafant; to compel fatisfaction. 2. Surcharging the common. Remedies: diftrefs, damage feafant; to compel fatisfaction: Action on the cafe; for damages : or, Writ of admeafurement of pafture ; to apportion the commun; and writ de fecunda fuperoneratione; for the fupernumerary cattle, and damages. 3. Inclofure, or obftruction. Remedies: Reflitution of the commnn, and damages; by affife of novel difeifin, and by writ of quod permittat: or, Damages only; by action on the cafe.
(5.) Difturbance of ways, is the obftruction, 1. Of a way in grofs, by the owner of the land. 2. Of a way appendant, by a flranger. Remedy, for both: damages; by action on the cafe.
(6.) Ditturbance of tenure, by driving away tenants, is remedied by a fecial action on the cafe; for damages.
(7.) Difturbance of patronare, is the hindrance of a patron to prefent his clerk to a benefice; whereof ufurpation, within fix months, is now become a fpecies.
(8.) Difturbers may be, 1. The pfeudo-patron, by his wrongful prefentation. 2. His clerk, by demanding inflitution. 3. The ordinary, by refufing the clerk of the true patron.
(9.) The remedies are, 1. By affife of darrein prefentiment; 2. By writ of quare inipedit;-to compel inAltution and recover damages : Confequent to which are the writs of quare incumbravit, and quare non ad$m i f i t$; for fubfequent damages. 3. By writ of right of advowfon; to compel inflitution, or eftablifh the permanent right.

Szer. XVII. Of injurias procecding from, or afo feding, the crowis.
(t.) Injuries to which the cpown is a party are, 1. Where the crown is the aggrefior. 2. Where the crown is the fufferer.
(2.) The crown is the aggreffor, whencuer it is in polfefion of any property to which the fubject hath a right.
(3.) This is remedied, I. By fetition of right; where the right is grounded on fate difclofed in the petition itfelf. 2. By monfrans de droit; where the claim is grounded on facts, already appearing on record. The effect of both which is to remove the hands (or poffeffion) of the king.
(4.) Where the crown is the fufferer, the king's remedies are, 1. By fuch common-law actions as are confilent with the royal dignity. 2. By inquef of offie, to recover poffeflion: which, when found, gives the king his right by folemn matter of record; but may afte:wards be traverfed by the fubject. 3. By writ of fire fucias, to repeal the king's patent or grant. 4. By information of intrufion, to give damages for any trefpafs on the lands of the crown; or of debt, to recover moneys due upon contraEt, or forfeited by the breach of any penal flatute; or fometimes (in the latter cafe) by information in rem: all filed in the exchequer ex officio by the king's attorney-general. 5. By writ of quo warranto, or information in the nature of fuch writ ; to feife into the king's hands any franchife ufurped by the fubje $\mathfrak{E}$, or to oult an ufurper from any public office. 6. By writ of mandamus, unlefs caufe; to admit or reftore any perfon intitled to a franchife or office: to which if a falle caule be returned, the remedy is by traverfe, or by action on the cafe for damages; and, in confequence, a peremptory mandamus, or writ of reflitution.

Sect. XVIII. Of the purfuit of remedies by action: and, firf, of the original writ.
(I.) The purfuit of the feveral remedies furnithed by the laws of England, is, 1. By afion in the courts of common laxy.. 2. By proceedings in the courts of equity.
(2.) Of an action in the court of common pleas (originally the proper court for profecuting civil fnits) the orderly parts are, 1. The original writ. 2. The procefs. 3. The pleadings. 4. The ifue, or denurrer. 5. The trial. 6. The judgment. 7. The proceedings in nature of appeal. 8. The execution.
(3.) The original writ is the beginning or foundation of a fuit, and is either optional (called a pracipe), commanding the defendant to do fomething in certain, or otherwife fhow caufe to the contrary ; or peremptory called a fi fecerit le fecurum), commanding, upon fecurity given by the plaintiff, the defendant to appear in court, to fhow wherefore he hath injured the plaintiff: both iffuing our of chancery under the king's great feal, and returnable in bank during term-time.

## Sect. XIX. Of frocc/s.

(1.) Process is the means of compeling the defendant to appear in court.
(2.) This includef, 1. Sumnons. 3. The writ of (2.) This includer, 1. Summons. 2. The writ of law of
attachment, or pene ; which is fometimes the frit or eryland, original procefs. 3 . The writ of difringas, or dilfefs critomifed. infinitc. 4. The writa of cap pias ald refponlichdum, and teflatunt capias: or, inftead of thefe, in the king's bench, the bill of Middlefex, and writ of latitat:-and, in the exchequer, the writ of quo minus. 5. The alias and phures writs. 6. The exigent, or writ of evigi fucias, proclamations, and ouelawry. 7. Appearance, and common bail. 8. The arrelt. 9. Special bail, firlt to the fueriff, and then to the action

## Sect. XX. Of pleadings.

Pleadings are the mutual altercations of the plaintifi and defendant in writing; under which are comprifed, r. The declaration or count ; (whercin, incidentally, of the vifne, nonfuit, retrasil, and difeontinuance). 2. The defence, claim of cognizance, imparlance, view, oyer, aid-pray $\leq$ r, voucher, or age; 3. The plea; which is either a dilatory plea ( $1 / f$, to the jurifdiction ; $2 d l y$, in difability of the plaintiff; 3 dly, in abatement), or it is a plea to the alion; fometimes confeffing the action eithcr in whole or in part; (wherein of a tender, paying money into court, and fet off) : but ufually denying the complaint, by pleading cither, $1 / 2$, the general iffue; or, $2 d l y$, a fpecial bar (wherein of juftifications, the thatutes of limitation, \&c.). 4. Replication, rejoinder, furrejoinder, rebutter, furrebutter, \&c. Therein of elloppels, colour, duplicity, departure, new affignment, proteltation, averment, and other incidents of pleading.

## Sect. XXI. Of iffue and demurrer.

(1.) Issue is whare the parties, in a courfe of pleading, come to a point affirmed on one lide and denied on the other ; which, if it be a matter of law, is called a denurrer; if it be a matter of fact, Atill retains the name of an iffue, of fact.
(2.) Continuance is the detaining of the parties in court from time to time, by giving them a day certain to appear upon. And, if any new, matter arifes firice the laft continuance or adjournment, the defendant may take advantage of it, even after demurer or iffue, by alleging it in a plea puis darrein continuance.
(3.) The determination of an iffue in law, or demurrer, is by the opinion of the judges of the court; which is afterwards entered on record.

Sect. XXII. Of the feveral species of trial.
(1.) Trial is the examination of the matter of fact put in iffue.
(2.) The fpecies of trials are, 1. By the record. 2. By infpectisn. 3. By certificate. 4. By quitneffes. 5. By wager of battel. 6. By wagger of lazv. 7. By jury.
(3.) Trial by the record is had, when the exifence of fuch record is the point in iflue.
(4.) Trial by infpection or examination is had by the court, principally when the matter in iffue is the evident object of the fenfes.
(5.) Trial by certificate is had in thofe cafes, where fuch certificate mult have been conclufive to a jury.
(6.) Trial by witueffes (the regular method in the England, epitomifed. civil law) is only ufed on a writ of dower, when the death of the hurband is in iffue.
(7.) Trial by zuager of battel, in civil cafes, is only had on a writ of right ; but, in lieu therenf, the tenant may have, at his option, the trial by the grand affic.
(8.) Trial by wager of lazu is only had, where the matter in iffue may be fuppofed to have been privily tianfacted between the parties themfelves, without the intervention of other witneffes.
exvii.

## Sect. XXIII. Of the trialby jury.

(r.) Trial by jury is, 1. Extraordinary; as, by the grand affize, in writs of right; and by the grand jury, in writs of attaint. 2. Ordinary.
(2.) The method and procefs of the ordinary trial by jury is, 1. The writ of venire facias to the theriff, coroners, or elifors: with the fubfequent compulfive procefs of babeas corpora, or diffringas. 2. The carrying down of the record to the court of nifi prius. 3. The fheriff's return; or panel nf , Ift, fpecial, 2 dly , common jurnrs. 4. The challenges; if, to the array ; 2dly, to the polls of the jurors; either, propter honoris refpecium, propter defectum, propter affectum (which is fometimes a principal challenge, fomeumes to the favour), or propter delichum. 5. The tales de circumflantibus. 6. The oath of the jury. 7. The evidence; which is either hy proofs, 114 , written; 2 dly, parole:-or, by the private knowledge of the jurors. 6. The verdict; which may be, aft, privy; 2dly, public; $3^{\text {dly, }}$, fpecial.
*viii. Sect. XXIV. Of judgment, and its incidents.
(i.) Whatever is tranfacted at the trial, in the court of nija prius, is added to the record under the name of a poftea: confequent upon which is the judgemert.
(2.) Judgment may be arrefled or flayed for caufes, 1. Extrinfic, or debors the record; as in the cafe of nerv trials. 2. Intrinfic, or within it; as where the declaration varies from the writ, or the verdict from the pleadings, and iflue; or where the cafe, laid in the declaration, is not fufficient to fupport the action in point of law.
(3.) Where the iffue is immaterial, or infufficient, the court may award a repleader.
(4.) $\tilde{J}^{u} d_{g} m e n t$ is the fentence of the law, pronounced by the court, upon the matter contained in the record.
(5.) Judgments are, r. Interlocutory; which are incomplete till perfected by a writ of inquiry. 2. Final.
(6.) Coffs, or expences of uit, are now the neceffary confequence of obtaining judgment.
txiz.
Sect. XXV. Of froceeding, in the nature of appeals.
(r.) Proceedings, in the nature of appeals from judgment, are, 1. A writ of attaint; to impeash the verdict of a jury; which of late has been fuperfeded by new trials. 2. A writ of audita querela; to difcharge a judgment by matter that has fince bappened.
3. A writ of error, from one court of record to anothe1; to correct judgments, erroneous in point of law, and not helped by the flatutes of amendment and jeofails.
(2.) Writs of error lie, 1. To the court of king's lench, from all inferior courts of record; from the court of common-plcas at Weftmintter; and from the court of king's seneb in Ireland. 2. To the cesurts of exchequer chamber, from the law fide of the court of exchequer; and from proceedings in the court of king's bench by bill. 3: To the houle of peers, from proceedings in the court of king's. bench by original, and on wits of error; and from the feveral courts of ex. thequer-chamber.

## Sect. XXVI. Of execution.

Execution is the putting in force of the fentence or judgment of the law. Which is effected, 1. Where $p$ ffffion of any hereditament is recovered: by writ of babere facius feifinam, poffifionem, Eic. 2. Where any thing is awarded to be done or rendered, by a fpecial writ for that purpofe: as, by writ of abatement, in cafe of nufance; retornn babendo, and capias in zuithernam, in replevin; diffringas and faire facias, in detmue. 3. Where money only is recovered; by writ of, ift, capias ad fatisfaciendum, againit the body of the defendaut ; or, in difault thereof, foire fa. cias againft his bail. zdly, Fieri facias, againlt his gools and chattels. 3 dly, Levari facias, againt his goods and the profits of his lands. 4 thly, Elegit, againl his goods, and the poffefion of his lands. jthly, Extendif facias, and other procels, on flatutes, recognizances, \&c. againlt his body, lands, and goods.
Sect. XXVII. Of proceedings in the courts of equity.
(i.) Matters of equity which belong to the peculiar jurifdiction of the court of cbancery, are, 1. The guardianfhy of infante. 2. The cuftody of ideots and lunatics. 3. The fuperintendance of charities. 4. Commiffions of bankrupt.
(2.) The court of exchequer and the duchy-cnurt of Lancafler, have alfo fome peculiar caufes, in which the intereft of the king is more immediately concerned.
(3.) Equity is the true fenfe and found interpretation of the rules of law; and, as fuch, is equally attended to by the judges of the courts both of commun law and equity.
(4.1 The effential differences, whereby the Englifh courts of equity are dillinguifhed from the courts of law, are, 1. The mode of proof, hy a difcovery on the oath of the party : which gives a jurifdiction in matters of account, and fraud. 2. The mode of trial; by depofitions taken in any part of the world. 3. The mode of relief; by giving a more fpecitic and extenfive remedy than can be had in the courts of law ; as, by carrying agreements into execution, flaying watle or other injuries by injunction, directing the fale of in. cumbered lands, \&c. 4. The true condruction of $\int_{e-}$ curities for money, by confidering them merely as a pledge. 5. The execution of $\begin{gathered}\text { ruffs, or fecond ufes, in }\end{gathered}$ a manner analogous to the law of legal eftates.
(5.) The proceesinga in the court of chaneery (to which thofe in the exchequer, \&.c. very nearly conform) are. 1. Bill. 2. Writ of fulpana; and, perliaps, injunction. 3. Proceis of contempt; vi\%. (ordinarily) attachment, attachment with proclamations, commif. fiun of rebellinn, ferjeant at arms, and fequeflations. 4. Appearance. 5. Demurrer. 6. Plea. 7. Anfiver. 8. Exceptions; amendments; crofs, or fupplemental, bills; bills of revivor, interpleader, \&cc. 2. Replication. 1o. Iflue. 11 . Depolitions, taken upon interrogatories; and fublequent publication thercof. 12 . Hearing. 13. Interlocutory decree; feigned iffue, and trial; reference to the mafter, and report; \&c. 14. Final decree. 15. Rehearing, or bill of review. 16. Appeal to parliament.

## CHAP. IV.

of Public Wrongs.
Sect. I. Of the nature of crimes, and their puni/bment.
(t.) N treating of public wrongs may be confidered, 1. The general nature of crimes and punifhments. 2. The perfons capable of committing crimes. 3. Their feveral degrees of guilt. 4. The feveral fpecies of crimes, and their refpective punifhments. 5. The means of prevention. 6. The method of punif). ment.
(2.) A crime, or miflemeanor, is an act committed, or omitted, in violation of a public law either forbidding or commanding it.
(3.) Crimes are diflinguifhed from civil injuries, in that they are a breach and violation of the public rights, due to the whole community, confidered as a community.
(4.) Puni/hments may be confidered with regard to, 1. The power; 2. The end; 3. The meafure;-of their infliction.
(5.) The power, or right, of inflicting human punifhments for natural crimes, or fuch as are mala in fe, was by the law of nature vefted in every individual: but, by the fundamental contract of fociety, is now transferred to the fovereign power; in which alfo is vefted, by the fame contraet, the right of puniming poftive offences, or fuch as are mala probilitio.
(6.) The end of human punifloments is to prevent future offences; r : By amending the offender himfelf. 2. By deterring others through his example. 3. By depriving him of the power to do future mifchief.
(7.) The meafure of human punifiments mult be determined by the wifdom of the fovereign power, and not by any uniform univerfal rule : though that wifdom may be regulated, and affited, by certain general, equitable, principles.

Sect. II. Of the perfons capable of committing
crimes.
(r.) All perfons are capable of committing crimes, unlefs there be in them a defecd of zuill: for, to conftitute a legal crime, there mint he buch a vitious will, and a vitious aet.
(2.) The will does not concur with the act, 1. Where
there is a defect of underfanding. 2. Where no will is exerted. 3. Where the aet is confrained by force and violence.
(3.) A vitious will may therefore be wanting, in the cafes of, I. Infancy. 2. Idiocy, or lunacy. 3. Drunkennefs; which doth not, however, excufe. 4. Misfortune. 5, Ignorance, or minake of fact. 6. Compulfion, or neceffity ; which is, ift, that of civil fubjection; 2dly, that of durefs per minas: 3 dly, that of choofing the lealt pernicious of two evils, where one is unavoidable ; 4thly, that of want, or hunger; which is no legitimate excufe.
(4.) The king, from his excellence and dignity, is alfo incapable of doing wrong.

Sect. III. Of principals and acceffories.
(r.) The different degrees of guilt in criminals are, 1. As principals. 2. As acceffories.
(2) A principal in a crinie is, I. He who commits the fact. 2. He who is prefent at, aiding, and abet ting, the cummifion.
(3.) An accecfory is he who doth not commit the fact, oor is pretent at the commiffion ; but is in fome furt concerned therein, either before or after.
(4.) Accefferies can ouly be in petit treafon, and felony: in high treafon, and mifdemeanors, all are principals.
(5) An acceflory, before the fact. is one who, being abfent when the crime is commited, hath procured, counfelled, or commanded, another to commit it.
(6.) An acceffory after the fact, is where a perfon, knowing a felony to have been committed, receives, relicves, comforts, or affifts, the felun. Such acceffory is ufually intitled to the benefit of clergy ; where the principal, and acceffory before the fact, are excluded from it.

## Sect. IV. Of offences againft God and religion.

(1.) Crimes and mifdemeanors cognizable by the laws of England are fuch as more immediately offend, 1. God, and his holy religion. 2. The law of nations. 3. The king, and his government. 4. The public, or comnonwealith. 5. Individuals.
(2.) Crimes more immediately offending GOD and religion are, 1. Apoflacy. For which the penalty is incapacity, and imprifonment. 2. Herefy. Penalty, for one fpecies thereof: the fame. 3. Offences againg the eftablifhed church:-Either, by reviling its ordinances. Penalties : fine; deprivation; imprifonment; for-feiture.-Or, by noncariformity to its worthip: rit, Thro' total irreligion. Penalty : fine. 2diy, Thro' proteftant diffenting. Penalty: fufpended by the toleration act. 3dy, Through papcry, either in profeflors of the popith religion, popifh recufants, convict, or popith prietls. Penalties: incapacity: double taxes; imprifonment ; fines; forfeitures; ahjuration of the realm: judgment of felony, without clergy ; and judgment of high treafon. 4. Blafphemy. Penalty: finc, imprifonment, and corporal punithment. 5. Profane frocaring and curfing. Penalty: fine, or boufe of correction. 6. Witcheraft; or, at leaft, the pretence thereto. Penalty: imprifonment, and pillory. 7. Religious impofures. Penalty :. fine, imprifonment, and
saw of England, eriomufed.
L.aw of England, epitonifed, (4) corporal punifhment. 8. Simony. Penaltice: forfeiture of double valuc; incapacity. 9. Salbathbreak. ing. Penalty; fine. 10. Drunkennefs. Penalty: fine, or focks. 11. Lezudne/s. Penalties; fine; imprifon. ment ; houfe of correction.
exrvii, SEcr. V. Of effences againg the law of nations.
(1.) The law of nations is a fyftem of rules, deducible by natural reafon, and eftablifhed by univerfal confent, to regulate the intercourfe between indepen. dent itates.
(2.) In England, the law of nations is adopted in its full extent, as part of the law of the land.
(3.) Offences againt this law are principally incident to whole flates or nations, but, when committed by piivate fubjects, are then the objects of the municipal law.
(4.) Crimes againt the law of nations, naimadverted on by the lawe of England, are, 1. Violation of fafeo covducis. 2. Infringement of the rights of embaffadors. Penalty, in both: arbitrary. 3. Piracy. Penalty: judgment of felony, without clergy.
cxwviii.

## Sect. VI. Of bightreafon.

(1.) Crimes and mifdemeanors more peculiarly offending the king and his government are, I. High trecfon. 2. Felonies injurious to the prerogative. 3. Pramunire. 4. Other mi/prifions and contempts.
(2.) High trenfon may; according to the fatute of Edward Ill. be committeds, 1. By compafing or imagining the death of the king, or queen-confort, or their eldeft fon and heir; demonftrated by fome overt act. 2. By viobting the king's companion, his eldett daugho ter, or the wife of his eldelt fon. 3. By fome overt adt of lerying war againt the king in his realm. 4. By wilberence to the king's enemies. 5. By countorfeiting the king's great or privy fock. 6. By counterferiting the Ling's montey, or inporting counterfeit money. 7. Dy killing the chancellor, treafurer, or king'b juitices, in the execution of their offices.
(3.) High treafons, created by fublequent fatutes, are fuch as relate, 1. To papifs: as, the repeated de. fence of the pope's jurifidiction; the coming from beyond fea of a natural-born popith priett ; the renoun. cing of allegiance, and reconciliation to the pope or other foreign power. 2. To the eoinage, or other figw natures of the kirg: as, counterfeiting (or, importing and uttering counterfeit) foreign coin, here current; forging the ligu manual, privy fignet, or privy Seal: fallifying, \&s, the current coins 3. To the proteflant fuctefion: as, correfponding with, or remit. ting to, the late Pretender's fons; endeavouring to impede the fueceffron: writing or printing, in defence of any Pretender's title, or in derogation of the act of fettiement, or of the power of parliament to limit the defcent of the crown.
(1.) The pusifbment of high treafon, in moles, is (geserally) to be, 1 . Drawi. 2. Hanged. 3. Embowelled alive. 4. Beheaded. 5. Quartered. 6. The head and quarters to be at the king'g difpofal. But, in trea. fons relating to the coin, only to be drawn, and harged till dead. Fremeles, in both cales, are to be dravn, and burned alive.

NO 176.

Secr. VII. Of folonies injurious to the king's prerogative.
(1.) Felony is that offence which occafions the total forfeiture of lands or goods at common law; now ufually alfo punihable with death, by hanging: unlefa through the benefit of elergy.
(2.) Felanies injurious to the king's prerogative (of which fome are within, others without, clergy) are, 1. Such as relate to the coin: as, the wilful mtering of counterfest money, \&c.; (to which head fome inferior mifdemeanors affecing the coinage may be alfo referred). 3. mon law, are, 1. Aregi. 2. Commiment and lati. 3. Profecution. 4. Procels. 5. Arraiguncit and Ewe of its incidents. 6. P'lce and ifive. Trial and con eptoronifid wiction. 8. Clerey. 0. 'Judunent, and its confequences.' 10. Reverfal of judgment. If. Refrivez or fardon. 12. Execution.
(2.), Au arrgl is the apprchending, or seftraining, of one's perfon; in older to be fortheoming to anfwict a crime whereof one is accufed or fufpected.
(3.) Tlhis may be done, 1. Dy warrant. 2. By an officer, without warrant. 3. By a private perfon, without wanant. 4 . By hue and cry.

SEct. XXII. Of commitment and bail. exiay:
(i.) Commitment is the confnement of one's perfon in prifon, for fafe cuftody, by warrant from proper authority; unlefs, in bailable offences, he puts in fufficient bail, or fecurity for his future appearaticc.
(2.) The magittrate is bound to take reafonable bail, if offered; unlefs the offender be not bailable.
(3.) Such are, 1. Perions arcufed of treafon; or, 2. Of murder ; or, 3. Of manflaughter, by indiet. ment ; or if the prifoner was clearls the flyyer. 4. Pri-fon-breakers, whicn committed for felony. 5. Outlaws. 6. Thofe who have abjured the realm. 7. Ap. provers, and appellees. 8. Perfons taken with the mainour. 9. Perfons accufed of arfon. 10. Excommunicated perfons.
(4.) The magithate may, at his difcretion, admit to bail, or otherwife, perfons not of good fame, charged with other fclonies, whether as principals or as ac-
ceffories. ceffories.
(5.) If they be of good fame, he is bound to admit them to bail.
(6.) The court of king's bench, or its judges in time of vacation, may bail in any cafe whatfoever.

## SEct. XXIII. Of the feveral modes of pro- fcer. Secation.

(s.) Prosecution, or the manner of accufing offenders, is either by a previous finding of a grand jury; as, 1. By prefentinest. 2. By inditment. Or, without fuch finding. 3. By information. 4. By appeal.
2. A prefentment is the notice taken by a grand jury of any uffence, from their own knowledge or obo fervation.
(3.) An indiafment is a written accufation of one or more perfons of a crime or mifdemeanor,' preferred to, and prefented on oath by, a grand jury ; exprefing, with fufficient certainty, the perfon, time, place, and offence.
(4). An information is, 1. At the fuit of the king and a fubject, upon penal tlatutes. 4. At the fuit of the king enly. Either, r. Filed by the attorney-general ex officio, for fuch mifdemeanors as affect the king's perion or goverument: or, 2. Fijled by the mafler of the crown-office (with leave of the court of king's bench) at the relation of fome private fubjict,
fering from indioments in this; that they are exhibited by, the informer, or the king's officer ; and not on the oath of a grand jury.
(5.) An appeal is an accufation or fuit, brought by one private fubject againft another, for larciny, rape, mayhem, arfon, or homicide; which the king cannot difcharge or pardon, but the party alone can releafe.
eslvi، - Sect. XXIV. Of proce/s upon an indiatment.
(1.) Process to bring in an offender, when indicted in his abfence, is, in mifdemeanors, by venire facias, diftrefs infinite, and capias: in capital crimes, by capias only: and, in both, by outlawry.
(2.) During this flage of proceedings, the indictment may be removed into the court of king's bench from any inferior jurifdiction, by writ of certiorari facias: and cognizance mult be claimed in places of exclufive jurifdiction.

- 1 invi.

Sect. XXV. Of arraignment, and its incidents.
(i.) Arraignment is the calling of the prifoner to the bar of the court, to anfwer the matter of the indittment.
(2.) Incident hereunto are, $\mathbf{r}$. The flanding mute of the prifoner; for which, in petit treafon, and felonies of death, he fhall undergo the peine fort $\mathcal{F}$ dure. 2. His confeffion; which is either finple, or by way of approvement.

## Sect. XXVI. of plsa, and ifue.

(r.) The plea, or defenfive matter alleged by the prifoner, may be, 1. A plea to the jurifdiction. 2. A demurrer in point of law. 3. A plea in abatement. 4. A fpecial plea in bar; which is, Ift, Auterfoits acguit; 2dly, Auterfoits conviaf; 3 dly , Auterfoits attaint; 4 thly, A pardon. 5. Tbe general iffue, not guilty.
(2.) Hereupon ifue is joined by the clerk of the arraigns, on bebalf of the king.

## Sect. XXVII. Of trial, and conviction.

(1.) Trials of offences, by the laws of England; were and are, 1. By ordeal, of either fire or water. 2. By the corfned. Both thafe have been long abolithed. 3. By battel, in appeals and improvements. 4. By the peers of Great Britain. 5. By jury.
(2.) The method and procefs of trial by jury is, 1. The impannelling of the jury. 2. Challenges; ift, for caufe; 2 dly , peremptory. 3. Tales de circumAlantibus. 4. The oath of the jury. 5. The evidence. 6. The verdiet, either general or fpecial.
(3.) Convizion is when the prifoner pleads, or is found guilty: whereupon, in felonies, the profecutor is intitled to, 1. His expences. 2. Rellitution of his goods.
\&

Sect. XXVIII. Of the benefit of clergy.
(I.) Clergy, or the benefit thereof, was originally derived from the ufurged jurifdiction of the Popifh
ecclefiafics; but hath fince been new-modelled by fe- I.aw veral itatutes.
(2.) It is an cxemption of the clergy from any other fecular punithment for felony, than imprifonment for a year, at the court's difcretion ; and it is extended likewife, abfolutely, to lay peers, for the firt offence; and to all lay-commoners, for the fiff offence alfo, upon condition of branding, imprifonment, or tranfportation.
(3.) All felonies are intitled to the benefit of clergy, except fuch as are now oulted by particular fatutes.
(4.) Felons, on receiving the benefit of clergy, (though they forfeit their goods to the crown), are difcharged of all clergyable felonies before committed, and rellored in all capacities and credits.

Sect. XXIX. of judgment, and its confequences.
(i.) Judgment (unlefs any matter be offered in arrel thereof) follows upon conviction; being the pronouncing of that punifhment which is exprefsly ordained by law.
(2.) Attainder of a criminal is the immediate confequence, 1. Of having judgment of death prononnced. upon him. 2. Of outlawry for a capital offence.
(3.) The confequences of attainder are, 1. Forfeiture to the king. 2. Corruption of blood.
(4.) Forfiture to the king, is, 1. Of real eftates, upon attainder;-in high treafon, abfolutely, till the death of the late Pretender's fons;-in felonies, for the king's year, day, and wafte;-in mifprifion of treafon, affaults on a judge, or battery fitting the courts; during the life of the offender. 2. Of perfonal eftates, upon conviction; in all treafon, mifprifion of treafon, felony, excufable homicide, petit larceny, ftanding. mute upon arraignment, the above-named contempts of the king's courts, and fight.
(5.) Corruption of blood is an utter extinction of all inheritable quality therein: fo that, after the king's forfeiture is firlt fatisfied, the criminal's lands efcheat to the lord of the fee; and he can never afterwards inherit, be inherited, or have any inheritance derived through him.

## Sect. XXX. Of reverfal of judgment.

(I.) JUDGMENTS, and their confequences, may be avoided, 1. By falfifying, or reverfing, the attainder: 2. By reprieve, or pardon.
(2.) Attainders may be falfified, or reverfed. I. Without a writ of error; for matter dehors the record. 2. By writ of error; for mittakes in the judgment, or record. 3. By act of parliament; for favour.
(3.) When an outlawry is reverfed, the party is refored to the fame plight as if he had appeared upon the capias. When a judrment, on conviction, is re, verfed, the party flands as if never acculed.

## Sect. XXXI. Of reprieve, and pardon.

(1.) A reprieve is a temporary fufpenfion of the judgment, 1. Ex arbitrio judicis. 2. Ex neceffitate legis; for pregnancy, infanity, or the trial of identity of perfon, which mult always be tried inflanter.

## Sect. XXXII, Of execution.

(r.) Execurion is the completion of human pu$=$ nifhment, and mult be ftrictly performed in the manner which the law directs.
(2.) The warrant for execution is fometimes under the hand and feal of the judge; fometimes by writ from the king ; fometimes by rule of court ; but commonly by the judge's figaing the calendar of prifonerz,. with their feparate judgments in the margin.

## Part III. The LAW of SCOTLAND.

## GENERAL OBSERVATIONS.

"HE municipal law of Scotland, as of moft other countries, confilts partly of flatutory or written law, which has the exprefs anthonity of the legiflative power; partly of cullomary or unwritten law, which derives force from its prefumed or tacit confent.
2. Under our ftatutory or written law is comprehended, (1.) Our aits of parliament : not only thofe which were made in the reign of James I. of Scotland, and from thence down to our union with Eng. land in 1707, but fuch of the Britifh fatutes enacted fince the union as concerned this part of the united kingdom.
3. The remains of our ancient written law were puatent hlifhed by Sir John Skene clerk-regiter, in the beginning of the laft century, by licence of parlizment. The books of Regium Maigftatem, to which the whole collection owes its title, feem to be a fyltem of Scots law, written by a private lawyer at the command of David I.; and though no exprefs confirmation of that treatife by the leginature appears, yet it is admitted to have been the ancient law of our kingdom by exprefs ftatutes. The borough-laws, which were alfo enaeted by the fame King David, and the flatutes of William, Alexander II. David II. and the three Roberts, are univerfally allowed to be genuine. Our parliaments have once and again appointed commiffions to revife and amend the Regiam Mrejefutern, and the other ancient books of our law, and to make their report: but, as no report appears to have been made, nor confequently any ratification by parliament, none of thefe remains are received, as of proper authority, in our courts; yet they.are of excellent ufe in proving and illultrating our moft ancient cultoms.
4. Our written law comprehends, (2.) The acts of federunt, which are ordinances for regulating the forms of proceeding before the court of feffion in the adminifration of juftice, made by the judges, who have a delegated power from the legillature for that purpofe. Some of thefe acts dip upon matter of right, which declare what the judges apprechend to be the law of Scotland, and what they are to obferve afterwards as a rule of judgment.
5. The civil, or Roman and canon laws, though they are not perhaps to be deemed proper parts of our written law, have undoubtedly had tbe greatef influence in Scotland. The powers exercifed by our fovereigas and judges have been jultified upon no other ground, thas that they were conformable to the civid
or canon laws; and a fpecial ftatute was judged necef: fary, upon the reformation, to refcind fuch of this conftitutions as were repugnant to the Proteftant doctrine. From that period, the canon law has been little refpected, except in quettions of tithes, patronages, and fome few more articles of ecclefaftical right: but the Roman continues to have great authority in all cafes where it is not derogated from by fatute or cuftom; and where the genius of our law fuffers us to apply it.
6. Our unwritten or cuflomary law, is that which; Cuflomary without being exprefly enacted by flatute, derives its or commaz force from the tacit confent of king and people; which ${ }^{\text {liw. }}$ confent is prefumed from the ancient cultom of the community. Cuftom, as it is equally founded in the will of the lawgiver with written law, has therefore the fame effects: hence, as one Itatute may be explained or repealed by another, fo a Itatute may be explained by the uniform practice of the community, and even go into difufe by a pofterior contrary cuilom. But this power of cuftom to derogate from prior flatutes is generally confined by-lawyers to latutes concerning private right, and does not extend to thofe which regard public policy.
7. An uniform tract of the judgments or decifions Decifions es $3^{*}$, of the court of feffion is commonly confidered as part the feffion. of our cuftomary law; and without doubt, where a particular cuitom is thereby fixed or proved, fuch cultom of itfelf conltitutes law : but decifions, though they bind the parties litigating, have not, in thcir own na. ture, the authority of law in limilar cafes; yet, where they continue uniform, great weight is jufly laid on them. Neither can the judgments of the houfe of pecrs Judgmintes of Great Britain reach farther than to the parties in the of the houfe appeal, fince in thefe the peers act as judges, not as ${ }^{\text {of }}$ peers. lawgivers.
8. Though the laws of nature are fufficiently pub. Promulgalihed by the internal fuggeftion of natural light, civil tion oflamsers laws cannot be confidered as a rule for the conduct of life, till they are notified to thofe whofe conduct they are to regulate. The Scots acts of parliament were, by our moft ancient cuffom, proclaimed in all the different thires, boroughs, and baron courts, of the kingdon. But after our ilatutes came to be printed, that cuflom was gradually neglected; and at laf, the publication of our laws, at the market-crofs of Edinburgh, was declared fufficient; and they became obligatory 40 days thereafter. Britifh ftatutes are deemed fufficier. $i-$ ly notified, without formal promulgation; either becaufe the printing is truly a publication; or becacte

Law of every fubjeef is, by a maxim of the Englifh law, party Scothand. felf or his reprefentative. After a law is publiftucd, no pretence of ignorance can excufe the breach of it.
9. As laws are given for the rule of our conduet, they can regulate future cafes only; for paft actions, being out of our power, can admit of no rule. Declaratory laws form no exception to this; for a flatute, where it is declaratory of a former law; does no morc than interpret its meaning; and it is included in the notion of imterpretation, that it mult draw back to the date cf the law iaterpretcd.
10. By the rules of inturpreting fatute-law received
farerneta-

## konoflaws

 . in Scotland, an argument may be ufed from the title to the act itfelf, a rubro ad nigrum; at leall, where the rubric has been eitber originally framed, or afterwards adopted by the legillature. The pieamble or narrative, which recites the inconveniences that had arifen from the former law; and the caufes inducing the enactmert, inay alfo lead a judge to the general meaning of the thatute. But the chief weight is to be laid on the Itatutory words.11. Laws, being directed to the unlearned as well as the learned, ought to be contrued in their moit ob. vious meaning, and not explained away by fubtle diftinctions; and no law is to fuffer a figurative interpretation, where the proper fenfe of the words is as commodions, and equally fitted to the fubject of the fa. tute. Laws ought to be explained fo as to exclude abfurlities, and in the fenfe which appears mofl agreeable to former laws, to the intention of the lawgiver, and to the general frame and fructure of the conilitution. In prohibitory laws, where the right of acting is ta ken from a perfon, folely for the private advantage of another, the confent of hinn, in whofe behalf the law swas made, thall fupport the act clone in breach of it; but the confent of parties immediately interefled has no effect in matters which regard the public utility of a iftere. Where the words of a flatutc are capable but of one meaning, the ftatute mult be obferved, however hard it may bear on particular perfons. Neverthclefs, as no human fyftem of laws can comprehend all pof. fible cafcs, more may fometimes be ineant by the law. giver than is expreffed; and hence certain flatutes, where extenfion is not plainly excluded, may be ex. tended beyond the letter, to fimilar and omitted cafes: others are to be confined to the flatutory words.
strict.
12. A flrict interpretation is to be applied, (1.) To correctory flatutes, which repeal or reftrict former laws; and to ftatutes which enact heary penalties, or reftrain the natural liberties of mankind. (2.) Laws, made on occafion of prefent exigencies in a flate, ought not to be drawn to fimilar cafes, after the preffure is over. (3.) Where flatutes eflablim certain folemnities as requibite to deeds, fuch folemnities are not fuppliable by equivalents; for folemnities lofe their nature, when they are not performed fpecifically. (4.) A ftatute, which enumeratcs fpecial cafes, is, with difficulty, to be extended to cafes not expreffed; but, where a law does not defend to particulars, there is greater reafon to extend it to fimilar cafes. (5.) Statutes, which carry a difpenfation or privilege to particular perfons or focieties, fuffer a frict interpretation ; becaufe they derogate from the general law, and imply a burden upon the reft of the community. But at no rate can 2 pri-
vilege be explained to the prejudice of thofe in whofe behalf it was granted. As the only foundation of cufomary law is ufage, which confifts in fact, fuch law can go no farther than the particular ufage has gone.
13. All ftatutes, concerning matters fpecially favoured by law, receive an ample interpretation; as laws for the encouragement of cominerce, or of any uffeful public undertaking, for making effectual the wills of dying perfons, for reftraining frand, for the fecurity of creditors, \&c. A flatute, though its fubject-matter fhould not be a favourite of the law, may be extended to fimilar cafes, which did not exitt when the fatute was made; and for which, tlicrefore, it was not in the lawgiver's power to provide.
14. Every ftatuce, however unfavourable, mutt re. ceive the interpretation neceflary to give it effect: and, on the other hand, in the extenfion of favourable laws, frope mul not be given to the imagination, in difcovering remote refemblances; the extenfion nuft be limited to the cafes inımediately fimilar. Where there is ground to conclude that the legiflature bas omisted a cafe out of the ttatute purpofely, the thatute cannot be extended to that cafe, let it be ever folimilar to the cafes expreffed.
15. The objects of the laws of Scotland, according to Mr Erlkine, one of the latell writers on the fubject, are, Perfons, 'lhiags, and Actions.

## CHAP. I .

of Persons.

$A^{\mathrm{M}}$Mong perfons, judges, who are invefted with juriddiction, deferve the firf confideration.

## Sect. I. Of jurifdifion and judges in general.

Jurisdietion is a power conferred upon a judge or juridii magitrate, to take cognifance of and decide caufcs according to haw, and so carry his fentences into, execution. That sract of grond, or diftrict, within which a judge has the right of juriddiction, is called his territory: and every act of jurifdiction exercifed by a judge without his torritory, either by pronouncing fentence, or carrying it into execution, is null.
2. The fupreme power, which has the right of en. acting laws, falls naturally to have the right of erecting courts, and appointing judges, who may apply thete laws to particular cafes : but, in Scotland, this right has been always intrulted with the crown, as having the executive power of the flate.
3. Jurifdiction is either fupreme, inferior, or mixed. Difine That jurifdiction is fupreme, from which there lies no tuns of appeal to a bigher court. Inferior courts are thofe whole fentences are fubject to the review of the fupreme couris, and whofe juridiction is confined to a parricular territory. Mixed jurifdiction participates of the nature both of the fupreme and inferior: thus the judge of the high court of admiralty, and the commiffar es of Edinburgh, have an univerfal jurifdiction over Scotland, and they can review the decrees of inferior adnirals and commiffaries; but fince their own decrees are fubject to the review of the courts of fefion or juficiary, they are, in that refpect, inferior courts.
4. Jurifdiction is either civil or criminal: by the fir?, queftions of private right are decided ; by the other, crimes are punifhed. But, in all jurifdiction, though merely
merely civil, there is a power iuherent in the judge to puninh either corporally, or by a pecuniany fine, thofe who offend during the proceedings of the court, or who fhall afterwards obfruct the execution of the ferstence.
5. Jurifdiction is either privative or cumulative. Privative jurifdiction, is that which belongs only to onc court, to the exclusion of all others. Cumulative, otherwife called concurrcul, is that which may be exercifed by any one of two or more courts, in the fame caufe. In civil cumulative jurifdiction, the private purfuer has the right of election before which of the courts he fhall fue; but as, in criminal quellions which are prolecuted by a public officer of crurt, a collifion of jurifdiation might happen, through each of the judges claiming the esercife of their right, that judge, by whofe warrant the delinquent is firlt cited or apprehended (which is the firlt tep of jurifdiction), acquires thereby (jure preventionis) the exclufive right of.jud. ging in the caufe.
6. All rights of jurifdiction, being originally granted in confideration of the firnefs of the grantee, were therefore perfonal, and died with himfelf. But, upon the introcuction of the feudal fyftem, certain jurifdictions were annexed to lands, and defcended to heirs, as well as the lands to which they were annexed; but now all heritable juridictions, except thofe of admiralty and a fmall pittance referved to barons, are either abolifhed, or refumed and annexed to the crown.
7. Jurifdiction is either proper or delegated. Proper jurifdiction, is that which belongs to a judge or magiftrate timfelf, in virtue of his office. Delegated, is that which is communicated by the judge to another who acts in his name, called a dienute cr defuty. Where a deputy appoints one under him, he is called a fubfitute. No grant of jurifdidion, which is an office requiring perfonal qualification3, can be delegated by the grantee to another, without an exprefs power in the grant.
8. Civil jarifliction is founded, I. Ratione domiciliz, if the defender has his domicile within the judge's territory. A domicile is the dwelling piace where a perfon lives with an intention to remain; and cufon has fixed it as a rule, that refidence for 40 days founds ju. rifdition. If one has no fixed dwelling place, e. g. a foldier, or a tuavelling merchant, a perfonal citation againgt him within the territory is fufficient to found the judge's jurifdiction ever him, even in civil queftions. As the defender is not obliged to appear before a court to which he is nor fubject, the purfuer mult follow the defender's domicile.
9. It is founded, 2. Rulione reifite, if the fubject in queftion iie within the territory. If that fubject be imnoveable, tbe judge, whofe. juriftiction is founded in this way, is the fole judge competent, excluding the judge of the domicile.
10. Where one, who has rot his domicile within the territory, is to be fued b'fore an infrrior court ratione rei fite, the court of feffion mult be applied to, whofe jurifdiction is univerfal, and who, of courfe, grants letters of fupplement to cite the defender to appear bcfore the inferior judge. Where the party to be fued refides in another kingdom, and has an eftate in this, the court of Ceffion is the only proper court, as the commune form to all perfons refiding abroad; and the
defender, if his eftate be heritable, is confidercl as law. fully fummoned to that court, by a citation at the market crofs of Edinburgh, and pier and fhore of Leith: but where a Atranger, not a native of Scotland, has onIy a moveable eilate in this kingdom, he is deemed to be folittle fubject to the jurifdiction of our courts, that ation cannot be brought againt him till his effets be firlt attached by an arreftment jarijfdiaionis fundunde caufla; which is laid on by a warrant iffuing from the fupreme courts of feffion, or admiralty, or from that within whofe territory the fubject is lituated, at the fuit of the ereditor.
11. A judge may, in frecial cafes, arre? or fecure Arrenmen: the perfons of fuch as have neither domicile nor eftate officange:es within his territory, even for civil debts. Thus, on the border between Scotland and England, warrants are granted of courfe by the judge ordinary of either fide, againft thofe who have their domicile upor the oppnfite fide, for arrefting their perfons, till they give caution judicio filit: and even the perfons of citizens or natives may be fo fecured, where there is juft reafon to fufpect that they are in meditatione furse, i. e. that they intend fuddenly to withdraw from the kingdom; ripon which fufpicion, the creditor who applies for'the warrant mult make oath. An inhabitant of a boroughroyal, who has firnifhed one who lives without the borough in meat, clothes, or other merchandize, and who has no fecurity for it but his own account-bonk, may arref his debtor, till he give fecurity juldicio foli.
12. A judge may be declined, i. e. his jurifdition Grounds of difowned judicially, 1. Ratione caufa, from his incom-drounds of petency to the fpecial caufe brought before him. 2. Rutione fufpeai juducis; where either the judge himfelf, or his near kinfman, has an interef in the fuit. No judge can wote in the caufe of his suther, brother, or fon, either by confanguiaity or affinity; nor in the caufe of his uncle or nephew by confanguinity. 3. Ratione privilegii; where the patty is by privilege exempted from their jurifdiction.
13. Prorogated jurifdiction (jutrijdizaio in confenticu- prorngated tes) is that which is, by the confent of parties, confer-juriffictioziv, red upor a judge, who, without fuch confent, would he incompetent. Where a judge is incompetent, every ftep he takes muft be null, till his jurifdiction be made competent by the party's actual fubmifion to it. It is otherwife where the judge is competent, but may be declined by the party upon privilege.
14. In order to prorogation, the judge mull have jurifdiction, fuch as inay be prorogated. Hence, prorogation cannot be admitted where the judge's jurifdiction is excluded by flature. Yet where the caufe is of the fame nature with thofe to which the junge is competent, though law may have confined his juridiction within a certain fum, parties may prorogate it above that fum unlefs where prorogation is prohibited. Prorogation is not admitted in the King's caufes; for the interett of the crown eannot be hurt by the negligence of its officers.
15. All judges mult at their admifion fwear, 1. The oath of allegiance, and fubferibe the affurance; 2. The judges. oatb of abjuration ; 3. The oath of fupremacy; laftly, The oath de fideli adminijItratione.
16. A party who has either properly declined the Letters of jurifdiction of the judge before whom he had been ci-advocsaico ted, or who thinks himfelf aggrieved by any proceed-
ings in the caule, may, before decrec, apply to the court of feffion to iffue letters of advocation for calling the action from before the inferior court to themfelves. The grounds, therefore, upon which a party may pray for letters of adrocation, are incompetency and iniquity. Under incompetency, is comprehended not only defect of jurifdiction, but all the grounds of declining a jurifdiction, in itfelf competent, arifing either from fufpicion of the judge, or privilege in the parties. A judge is faid to commit iniquity, when he either delays juftice, or proneunces fentence, in the exercife of his juriddiction, contrary to law.
Advocation 17. That the court of feifion may not walte their Show limit- time in trifles, no caule for a fum below twetve pounds *d. Sterling can be advocated to the court of feffion from the inferior judge competent : but if an inferior judge fitall proceed upon a caule to which he is incompetent, the caule may be carried from him by advocation, let the fubject be ever. fo inconfiderable.
sivi. Sect. II. Of the fupreme judges and courts of Scotland.

Fing and might by our conltitution have judged in all caufes, either in his own perfon, or by thofe whom he was plea. fed to veft with jurifdiction.
parliment. 2. The parliament of Scotland, as our court of the laft refort, had the right of reviewing the fentences of all our fupreme courts.
Farliament of Great Brtain.

## raurt of

 frilion.3. By the treaty of union, 1707, the parliaments of Scotland and England are i:nited into one parliament of Great Britain. From this period, the Britifh houfe of peers, as coming in place of the Scots parliament, is become our court of the laft refort, to which appeals lie from all the fupreme courts of Scotland: but that court has no original jurifdiction in civil mat-- eers, in which they judge only upon appeal. By art. 22. of that treaty, the Scots hare of the a eprefentation in the houfe of peers is fixed to 16 Scots peers elective; and in the houle of commons, to 45 commoners, of which 30 are elected by the frecholders of counties, and 15 by the royal boroughs. The Scots privy council was alfo thereupon abolifhed, and funk into that of Great Britain, which for the future is declared to have no other powers than the Englifh privy council had at the time of the uaion.
4. A court was erected in 1425 , confifing of certain perfons to be named by the king, out of the three
ellates of parliament, which was velted with the jurifdiction formerly lodged in the council, and got the name of the Jeffor, becaule it was ordained to hold annually a certain number of feffions at the places to be fpecially appointed by the king. This court had a juridiction, cumulative with the judge ordinary, in fpuilzies, and other poffeffory actions, and in debts; but they had no cognifance in queftions of property of heritable futjects. No appeal lay from its judgments to the parliament. The judges of this court ferved by rotation, and were changed from time to time, after having fat to days; and became fo negligent in the adminiftration of juftice, that it was at laft thought neceffary to transfer the jurifdiction of this court to a council to be named by the king, called the daily eouncil.

If $177 \%$
5. 'The prefent model of the court of fefion, or college of juftice, was formed in the reign of James V. Scotlan

Law The judges thereof, who were vefted with an univerial civil jurifdiction, condilted originally of feven church. College men, feven laymen, and a prefident, whom it behoved ${ }^{\text {jultice. }}$ to be a prelate: but \{piritual judges were in 1584 partly, and in 1640 totally, prohibited. The judges judges, of feffion have been always received by warrants from whom the crown. Anciently his majeßty feems to have trans. med. ferred to the court itfelf the right of chooling their own prefident; and in a federunt recorded June 26.1593. the king condefcended to prefent to the lords, upon every vacancy in the bench, a lilt of three perfuns, out of which they were to choofe one. But his majetty foon refumed the exercife of both rights, which continued with the crows till the ufurpation; when it ivas ordained, that the king thould name the judges of the feflion, by the advice of parliament. After the reftoration, the nomination was again declared to be folely in the fovereign.
6. Thougt judges may, in the general cafe, be na-Their $q$ med at the age of 2 I years, the lords of feffion muth fication be at leaft 25 . No perfon can be named lord of feffion, a:id tria who has not ferved as an advocate or principal clerk of feffion for five years, or as a writer to the fignet for ten : and in the cafe of a writer to the lignet, he mult undergo the ordinary trials upon the Roman law, and be found qualified two years before he can be named. Upon a vacancy in the bench, the king prefents the fucceffor by a letter addreffed to the lords, wherein he requires them to try and admit the perfon prefented. The powers given to them to reject the prefentee upon tiial are taken away, and a bare liberty to remonftrate fublituted in its place.
7. Befides the 15 ordinary judges, the king was allowed to name three or four lords of his great council, who might fit and vote with them. Thefe extraordinary lords were fuppreffed in the reign of Geo. I.
8. The appellation of the collcge of juflice is not con-Privilegs fined to the judges, who are diltinguifhed by the namecf the cu of fenators; but comprehends advocates, clerks of fef- lege of $j$ fion, writers to the fignet, and others, as defcribed, ftce. Aat S. 23 d Feb. 1687 Where, therefore, the cullege of jultice is intitled to any privilege, it extends to all the members of the college. They are exempted from watching, warding, and other fervices within borough; and from the payment of miniters fipends, and of all cultoms, \&cc. impoled upon goods carried to or from the city of Edinburgh. Part of thefe privileges and immunities were lately called in queftion by the city of Edinburgh; but they were found by the court of feffion (affirmed upon appeal) to be in full force.
9. Though the juriddiction of the feffion be properly Juriddai limited to civil caufer, the judges have always fullained of the fof themfelves as competent to the crime of falfelood. fion Where the falfehood deferves death or demembration, they, after finding the crime proved, remit the criminal to the court of julticiary. Special thatute has given to the court of feffion jurifdiction in contraventions of law-burross, deforcements, and breach of arreftment; and they have been in ufe to judge in battery pendente lite, and in ufury.
10. In certain civil caufes, the juriddiction of the felfion is exclufive of all inferior jurifdictions; as in declarators of property, and other competitions of heri3 tabis
table rights, provings of the tenor, ceffrones bonorum, reftitution of minors, reductions of decrees or of writings, fales of the eftates of minors or bankrupts, $E \in c$. In a fecond clafs of caufes, their jurididtion can be only exercifed in the way of review, after the caufe is brought from the inferior court ; as in maritime and confillorial caufes, which muft be purfued in the firt inftance before the admiral or commiffary; and in actions below twelve pounds Sterling, which mult be commenced before the judge-ordinary. In all civil actions, which fall under neither of thefe claftes, the jurifdiction of the feffion is concurrent, even in the firlt intlance, with that of the judge-ordinary. The feffion may proceed as a court of equity by the rules of confeience, in abating the rigour of law, and giving aid in proper cafes to fuch as in a court of law can have ne remedy: aod this power is inherent in the fupreme court of every country, where feparate courts are not eftablifhed for law and for equity.

This court formerly met upon the 12 th day of June and rofe upon the isth day of Augult for the fummer feffion; but now, in confequence of an act paffed in the feffion of parliament $1790^{\circ}$, it meets on the 12 th of May and rifes on the 11th of July for the fummer feffion; the winter federunt ftill remaining as formerly, viz. from the 12 th of November to the 11 th of March inclufive.
11. The fupreme criminal judge was flyled the Jufticiar; and he had anciently an univerfal civil jurifdiction, even in matters of beritage. He was obliged to hold two jultice courts or ayres yearly at E. dinburgh or Peebles, where all the freeholders of the kingdom were obliged to attend. Befides this univerfal court, fpecial juftice-ayres were held in all the different hhires in the kingdom twice in the year. Thefe laft having gone into difule, eight deputies were appointed, two for every quarter of the kingdom, who fhould make their circuits over the whole in April and October.
12. The office of deputies was fuppreffed in 1672 ; and five lords of feffion were added, as commiffioners of jutticiary, to the juttice-general and jultice-clerk. The juftice-general, if prefent, is conftant prefident of the court, and in his abfence the juftice-clerk. The kingdom is divided into three diftricts, and two of the judges are appointed to hold circuits in certain boroughs of each diftrict twice in the year; one judge may proceed to bulinefs in the abfence of his colleague. In trials before this court the evidence was always taken down in writing till the act $23 \backslash$ Geo. Itl. was paffed; by which the judges may try and determine all caules by the verdict of an affize upon examining the witneffes viva voce without reducing the tettimony into writing, unlefs it thall appear more expedient to proceed in the former way, which they have it in their power to do. This act was at firf temporary, but is now made perpetual by 27 th Geo. III. cap. 18.
13. By an old Aatute, the crimes of robbery, rape, muder, and wilful fire-raifing, (the four pleas of the Crown), are faid to be referved to the King's court of jufticiary; but the only crime in which, de praxi, the jurifdiction of jutticiary became at laft exclufive of all inferior criminal juri!diction, was that of high treafon. The court of julliciary, when fitting at Edinburgh, has a power of advocating caufes from all inferior criminal judges, and of fufpending their fentences.

Yol, IX. Part II.
14. The circuit-court can alfo judge in all criminal caufes which do not infer death or demembration, upon appeal from any inferior court within their diftrict; and has a fupreme civil jurifdiction, by way of appeal, in all caufes not exceeding twelve pounds Sterling, in which their decrees are not fubject to review ; but no appeal is to lie to the circuit, till the caufe be finally determined in the infcior court.
15. The count of exchequer, as the King's cham-Cuurt of berlain court, judged in all queftions of the revenue. In exchequer. purfuance of the treaty of Union, that court was abolifhed, and a new court erected, confifing of the Lord High Treafurer of Great Britain, and a chief Baron, with four other Barons of Exchequer; which Barons are to be made of ferjeants at law, Englifh barriters, or Scots adyocates of five years ftanding. This court has a privative jurifdiction conferred upon it, as to the duties of culloms, excife, or other revenues appertaining to the king or prince of Scotland, and as to all honours and eftates that may accrue to the crown; in which matters, they are to judge by the forms of proceeding ufed in the Englif coust of exchequer, under the following limitations; that no debt due to the crown thall affect the debtor's real eftate in any other manner than fucli cttate may be affected by the laws of Scotland, and that the validity of the crown's titles to any honours or lands fhall continue to be tried by the court of feffion. The barons have the powers of the Scots court transferred to them, of paffing the accounts of theriffs, or other officers who have the execution of writs iffuing from, or returnable to, the court of exchequer, and of receiving refignations, and paffing fignatures of charters, gifts of cafualties, \&c. But tho, all thefe mult pafs in exchequer, it is the court of feffion only who can judge of their preference after they are completed.
16. The jurifdiction of the admiral in maritime Admiralty caufes was of old concurrent with that of the feffion. court. The high-admiral is declared the king's juftice general upon the feas, on frefh water within Hood mark, and in all harbours and creeks. His civil jurifdiction extends to all maritime caules; and fo comprehends quetlions of charter-parties, freights, falvages, bottomries, \&c. He excrififes this fupreme jurifdiction by a delegate, the judge of the high court of adoniralty; and he may alfo name inferior deputies, whofe jurifdiction is limited to particular diltricts, and whofe fentences are fubject to the review of the high court. In caufes which are declared to fall under the admiral's cognizance, his jurifdiction is fole ; in fo much, that the fetrion it felf, though it may review his decrees by fufpenfion or reduction, cannot carry a marisime quettion from him by advocation. The admital has acquired, by ufage, a jurifdiction in mercantile caufes, even where they are not ttrictly maritime, cumulative with that of the judge-ordinary.
17. All our fupreme courts have feals or fignets, pro- signe. per to their feveral jurifdictions. The courts of feffion and jufticiary ufed formerly the fame fignet, which was called the king's, becaufe the writs ifluing from thence run in the king's name; and thougts the jufliciary got at latt a feparate fignet foritfllf, yet that of the feffion Atll retains the appellation of the k:ing's fignet. In this office are fealed fummonfes for citation, letters of executorial diligence, or for llaying or crohibiting of dili.
gence, and generally whatever paffes by the warrant of the feffion, and is to be executed by the officers of the court. All thefe muft, before fealing, be figned by the writers or clerks of the fignet: But letters of diligence, where they are granted in a depending procefs, mercly for probation, though they pals by the fignet, muft be fubleribed by a cierk of feffion. The clerks of the lignet alfo prepare and fubferibe all fignatures of charters, or other royal grants, which pafs in exchequer.
clviii.

Sheriff.

Lord of regality.

Stewart.

Sailie.

Shfriff, (from reeve, governor, and fieer to cut or divide), is the judge-ordinary conkituted by the crown over a particular divifion or county. The fheriff's jurifdiction, both civil and criminal, was, in ancient times, nearly as ample withiu his own territory as that of the fupreme courts of feffion and jufticiary was over the whole kingdom.
2. His civil juridtiction now extends to all actions upon contracts, or other perfonal obligations; forthcomings, poindings of the ground, mails and duties; and in all poffeffory actions, as remuvings, ejections, fpuilzies, \&c. : to all brieves iffuing fiom the chancery, as of inqueft, terce, divifion, tutory, \&c. ; and even to adjudications of land eftates, when proceeding on the renunciation of the apparent heir. His prefent crimi mal jurifdiction extends to certain capital crimes, as the ft, and even murder, though it be one of the pleas of the crown; and he is competent to mont queftions of public police, and has a cumulative jurifdiction with juftices of the peace in all riots and breaches of the peace.
3. Sheriffs have a minitherial power, in virtue of which they return juries, in order to the trial of caufes that require juries. The writs for electing inembers of parliament have been, fince the union, directed to the fhe riffs, who, after they are executed, return them to the crown office from whence they iflued. They alfo execute writs iflising from the court of exchequer ; and in general, take care of all eftates, duties, or cafualties that fall to the crown within their territory, for whicb they mut account to the exchequer.
4. A lord of regality was a magiftrate who had a grant of lands from the fovereign, wihh royal jurifdiction arnexed thereto. His civil jurifdiction was equal to that of a heriff; his criminal extended to the four pleas of the crown. He liad a riglit to repledge or reclaim all criminals, fubject to his jurifdiction, from any other competent court, though it were the jutticiary itfelf, to his own He had alfo right, according to the moft common opinion, to the fingle efcheat of all denounced perfons refiding within his jurifdiation. even though fuch privilege had not been expreffed in the grant of regality.
5. The Hewart was the magitrate appointed by the king over fuch regality lands as happened to fall to the crown by for?eiture, \&c. and therefore the ftewart's jurifdiction was equal to that of a regality. The two ltewartries of Kirkcudbright, and of Orkney and Zet. land, make fhires or counties by themfelves, and fend each a reprefentative to parliament.
6. Where lands not erected into a regality fell into the king's hands, he appointed a bailic over them, whofe jurifdiction eras equal to that of a fheriff.
7. By the late jurifdition-at, 20 Geo . II. all heritable regalities and bailieties, and all fuch heritable Theriffships and flewartries as were only parts of a thire, are diffolved; and the powers formerly vefted in them are made to devolve upon fuch of the king's courts as thefe powers would have belonged to if the jurifdictions diffolved had never been granted. All theriffships and ftewartries that were no part of a fhire, where they had been granted, either heritably or for life, are refumed and anmexed to the crown. No high fheriff or tewart can hereafter judge perfonally in any caufc. One fheriff or ftewart-depute is to be appointed by the king in eveny thire, who nult be an advocate of three years Itanding ; and whofe ffice as theriff or ftewatt-depute is now by 28 . Geo. II. held ad vitam aut culpam.
8. The appanage, or patrimony, of the prince of Prince Scotland, has been long erected into a regality-jurif- Scolla dietion, called the Principality It is perfonal to the king's eldeft fon, upon whofe death or fucceffion it returns to the crown. The pritice has, or may bave, his own chancery, from which his writs iffue, and may name his own chamberlain and other officers for receiving and managing his revenue. The vaffals of the princes are intitled to elect, or to be tlected, members princes are intitled to elect, or to be tlected, members of the crown.
9. Sultices of the peace are magitrates named by
the fovereign over the feveral counties of the kingdom, for the fpecial purpofe of preferving the public peace.
Anciently their power teached little farther than to for the fpecial purpofe of preferving the public peace.
Anciently their power reached little farther than to bind over diforderly perfons for their appearance before the privy council or julticiary; afterwards they were anthorifed to judge in breaches of the peace, and in moft of the laws concerning public policy. They may compel workmen or labourers to ferve for a reafonable fee, and they can condemin mafters in the wages due to their fervants. They have power to judge in queltions of highways, and to call out the tenants with their cottars and lervants to perform fix days work yearly for upholding them. It has been lately, however, found by the court of feffion, that juntices have no jurifdiction whatever in common actions for debt. So that it now feems fixed, that they arc incompetent in fuch actions, except where they are declared competent by fpecial ftatute.
ro. Since the union, our juftices of the peace, over and above the powers committed to them by the laws
of Scorland, are authorifed to exercife whatever beand above the powers committed to them by the laws
of Scotland, are authorifed to exercife whatever belonged to the office of an Englifh juttice, in relation to the public peace. From that time, the Scots and the Englifh commiffions have run in the fane and the Englith commiffions have run in the caine
ftyle, which contain powers to inquire into and juJge in all capital crimes, witchcrafts, felonies, and leveral others fpecially enumerated; with this linitation fub-
joined, of qubich juftices of the peace may lawfully inothers ipecially enumerated; with this linitation fub-
joined, of rubich juftices of the peace may lazufully inquire. Two jultices can conititute a court. Special Itatute has given the cognizance of feveral natters of
excife to the juftices, in which their fentences are fiItatute has given the cognizance of feveral matters of
excife to the juftices, in which their fentences are final. As to which, and the powers thereby vefted in them, the reader muft of neceffity be referred to the excife laws; it not falling within the plan of this excile laws; it not falling within the plan of this
work, to enter into fo very minute a detail as that wonld prove.
11. A borough is a body-corporate, made up of Boror the inhabitants of a certain tract of ground erected by the fovereign, with jurifdiction annexed to it. Bo-  -

}

roughs are erected, either to be holden of the fovereign himfelf, which is the general cafe of royal borought; or of the fuperior of the lands erected, as boroughs of regality and barony. Boroughs royal have power, by their chatters, to choofe annually certain office-bearers or magillrates; and in boroughs of regality and barony, the nomination of nagilltrates is, by their charter, lodged fometimes in the inhabitants, fometimes in the fuperior. Bailies of borouglas have jurifdiction in matters of debt, Cervices, and queftions of poffeffion betwixt the inhabitants. Their criminal jurifdiction extends to petty riots, and recklefs fire-railing. The dean of guild is that magiftrate of a royal borough who is head of the merchant-company; he has the cognizance of mercantile caufes within borough; and the infpection of buildings, that they encroach neither on private property, nor on the public itreets; and he may dircet infufficient houfes to be pulled down. His jurifdiction has no dependence on the court of the borough, or bailie-court.
12. A baron, in the large fenfe of that word, is one who holds his lands immediately of the crown; and, as fuch, had, by our ancient contitution, right to a feat in parliament, however fmall his freehold might have been. The leffer barons were exempted from the burden of attending the fervice of parliäment. This exemption grew infenfibly into an utter difability in all the leffer barons from fitting in parliament, without election by the county; though no flatute is to be found exprefsly excluding them.
13. To conflitute a baron in the ftrict law fenfc, his lands mult have been erected, or at leaft conirmed, by the king, in liberam baioniam; and fuch baron had a certain jurifdiction, both civil and criminal, which be might have exercifed, either in hie own perfon, or by his bailie.
14. By the late jurifdiction-act, the civil jurifdiction of a baron is reduced to the power of rec. vering, from his vaffals and tenants, the rents of his lanc :, and of condemning them in mill-fervices; and of ju _ring in caufes where the debt and damages do not excced 40 s. Sterling. His criminal jurifdiction is, by the fame flatute, limited to affaults, batteries, and other fmaler offences, which may be punifhed by a fine not exceeding zo s. Sterling, or by fetting tbe offender in the flocks in the day-time not above three hours; the fine to be levied by poinding, or one month's imprifonment. The jurifdiction formerly competent to proprietors of mines, and coal or falt works, over their workmen, is referved; and alfo that which was competent to proprietors who had the right of fairs or markets, for correcting the diforders that might happen during their continuance ; provided they fhall exercife no jurifdiction infurring the lofs of life or demenbration.
15. The high conftable of Scotland had no fixed territorial jurifdiction, but followed the court ; and had, jointly with the marifchal, the cognizance of all crimes committed within two leagues of it. All other conItabularies were dependent on him: thefe had cafles, and fometimes boroughs, fubject to their jurifdiction, as Dundee, Montrofe, \&c. and among other powers, now litule known, they liad the right of exercifing criminal juriddiction within their refpective territories du-
ring the continuance of fairs. By the late juridiction- Law of ast, all jurifdictiens of conftabulary are diffolved, ex- Scontand. cept that of high-conttable.
16. The office of the Lyon King of arms was chief. Lyonking ly minifterial, to denounce war, proclaim peace, carry ${ }^{2 t}$ amm. public meffages, $\& e c$. But be has alfo a right of jurifdittion, whereby he can punifl all who ufurp arms contrary to the law of arms, and deprive or fufpend meffengers, heralds, or purfuivants, (who are officers named by himfelf) ; but he has no cognizance of the danage arifing to the private party through the meffenger's fault. Meffengers are fubfervient to the fupreme courts of feffion and jufticiary; and their proper bufinefs is to execute all the king's letters either in civil or criminal caufes. They mult find caution for the proper difcharge of their duty qua meffengers; and in cafe of any malverfation, or neglect, by which damage arifes to their employers, their fureties may be recurred upon for indemnitication. Thefe fureties, however, are not anfwerable for the conduct of the meflenger in any other capacity but qua fuch; and therefore, if a meffenger is authorifed to uplift payment from a debtor, and fails to account to his employer, the cautioner is not liable; his obligation extending only to the regular and proper duties of the office in executing the diligence, or the like.
17. Our judges had, for a long time, no other fa- Sentence. laries or appointments than what arofe from the fen- moneney., tences they pronounced. Our criminal judges applied to their own ufe the fines or iffucs of their feveral courts; and regalities had a right to the fingle efcheat of all perfons denounced, who refided within their jurildiction; and our civil judges got a certain proportion of the fum contained in the decree pronounced. But thefe were all prohibited upon regular falaries being fettled upon thens.

> Secr. V. of ecclefiafical perfons.

clix.

The Pope, or bithop of Rome, was long acknow. ledged, over the wellern part of Chriflendom, for the head of the Chrillian church. 'I'he papal jurifdiction was abolifhed in Scotland anno 1560. The king was, by act 1669 , declared to have fupreme authority over all perfons, and in all caufes ecclefiaftical; but this act was repealed by 1690 , as inconfittent with Preflyterian church-government, which was then upon the point of being ellablifhed.
2. Before the reformation from Popery, the clergy was divided into fecular and regular. The fecular had a particular tract of ground given them in charge, within which they exercifed the pafforal office of bithop, preflyter, or other church-officer. The regular clergy had no cuse of fouls; but wire tied down to refidence in their abbacies, priories, or other monafteries : and they got the name of regular, from the rules of mortification to which they were bound, according to the inflitution of their fevcral orders. Upon the vacancy of any benefice, whether fecular or regular, commendators were frequently appointed to levy the fruits, as factors or ftewards during the vacancy. The Pope alone could give the higher benefices in commendam; and at laft, from the plenitude of his power, he came to name commendators for life, and without any obli-
gation to account. After the reformation, feveral ab. bacies and priories were given by James VI. in perpe-
tuam comnendam, to laics.
3. Upon abolifhing the Pope's authority, the regular clergy were totally fuppreffed; and, in place of all the different degrees which dillinguifhed the fecular cler. gy, we had at firt only paroclial prefbyters or miniAcrs, and fuperintendants, who had the ovel light of the church within a certain diftrict : foon thereafter the church-government became epifcopal by archbimops, bifhops, \&c.; and after fome intermediate turns, is now prefbyterian by kirk.feffions, prefbyteries, fynods, and general affemblies.
4. Prelate, in our Itatutes, fignifies a bihnp, abbot, or other dignified clergyman, who in virtue of hits office had a feat in parliament. Every bifhop had his chapter, which conflited of a certain number of the miniters of the diocefe, by whofe affiltance he managed the affairs of the church within that diftrict. The nomination of bifhops to vacant fees has been in the crown fince 1540, though under the appearance of continuing the ancient right of election, which was in the chapter. The confirmation by the crown under the great feal, of the chapter's election, conferred a right to the fpirituality of the benefice; and a fecond grant, upon the confecration of the bifhop-elen, gave a title to the temporality; but this fecond grant fell foon into difufe.

## Patronayc.

5. He who founded or endowed a church was intitled to the right of patronage therenf, or altvoratio ecclfig; whereby, among other privileges, he might prefent a churchman to the cure, in cafe of a vacancy. The prefentee, after lie was received into the church, had a right to the henefice proprio jure; and if the church was parochial, he was called a parfon. The Pope claimed the right of patronage of every kirk to which no third party could thew a fpecial title; and, fince the reformation, the crown, as coming in place of the Pope, is confidered as univerfal patron, where no right of patronage appears in a fubject. Where two churches are united, which had different patrons, each patron prefents by turns.
6. Gentemen of ellates frequently founded colleges or collegiate charches; the head of which got the name of provof $f$, under whom were certain prebendaries, or canons, who had their feveral ftalls in the church, where they fung maffes. Others of leffer fortunes founded chaplainries, which were donations granted for the finging of maffes for deceafed friends at particular altars in a church. Though all thefe were fuppreffed apon the reformation, their founders continued patrons of the endowments; out of which they were allowed to provide burfars, to be educated in any of the univerfitics.
7. Wh re a fund is gifted for the eftablifhment of a fecond minitter in a parifh where the cure is thought 100 heavy for one, the patronage of fuch benefice does not belong to the donior, but to him who was patron of the church, unlffs either where the donor has referved to himfelf the right of patronage in the donation, or where he and his fucceffors have been in the confant ufe of prefenting the fecond miniter, without challenge from the patron. The right of prefenting incumbents was by 16yo, c. 23. taken from patrons, and velted in the hicriturs and siders of the parifh, upon
payment to be made hy the heritors to the patron of 1 ,aw 600 merks; but it was again reftored to patrons, 10 Scota An. c. 12. with the exception of the prefentation fold in purfuance of the former act.
8. Patrons were not fimply adminiftrators of the Patrons church; for they held the fruits of the vacant benefice as their own, for fome time after the reformation. But that right is now no more than a truft in the patron, who muft apply them to pious ules within the parif, at the fight of the heritors, yearly as they fall due. If he fail, he lofes his right of adminiftering the vacant ftipend for that and the next vacancy. The kithg, who is exempted from this rule, may apply the vacant flipend of his churches to any pious ufe, though not within the parifh. If one fhould be ordained to a church, in oppofition to the prefentee, the patron, whofe civil right cannot be affeeted ly any fentence of a church-court, may retain the itipend as vacant. Pdtrons are to this day intitled to a feat and burial-place in the churches of which they are patrons, and to the right of all the teinds of the patifl not leritably difponed.
9. That kirks may not continue too long vacant, the patron mul? prefent to the prefbytery (formerly to the bihop), a fit perfon for fupplying the cure, within fix months from his knowledge of the vacancy, otherwife the right of prefentation acciues to the prefloytery jure devoluto. Upon prefentation by the patron, the bifhop cullated or conferred the benefice upon the prefentee by a writing, in which he appointed certain miniters of the diacefe to induce or inftitute him into the church ; which induction completed his right, and was performed by their placing him in the pulpir, and delivering to him the bible and keys of the church. The bifhop collated to the churches of which himfelf was patron, pleno jure, or without prefentation; which be alfo did in menfal clurches, whofe patronages were funk, by the clurches being appropriated to him, as part of his patrimony. Since the revolution, a judicial act of admiffion by the prefoytery, proceeding either upon a prefentation, or upon a call from the heritors and elders, or upon their own jus devolutum, completes the minifter's right to the benefice.
10. Soon after the reformation, the Popifh church- Pr, viif men were prevailed upon to refign in the fovereign's for die hands a third of their benefices; which was appiopri-formed ated, in the firlt place, for the fubfiftence of the reform. clergy. ed clergy. To make this fund effectual, particular localities were affigned in every benefice, to the extent of a third, called the afumption of thirds; and for the farther fupport of misiliters, Queen Mary made a grant in their favour of all the fmall benefices not exceeding 300 merks. Bifhops, by the act which tellored them to the whole of their benefices, were obliged to maintain the minifters within their diocefes, out of the thirds; ard in like manner, the laic titulars, who got grants of the teinds, became bound, by their acceptation there of, to provide the kirks within rheir erec. tions in competent flipends.
II. But all thofe expedicnts for the maintenance of Conmm the clergy having proved ineffectual, a commifion of fion for parliament was appointed in the reign of James VI. plantin for planting kirks, and modifying fipends to minifers liel:, out of the teinds; and afterwards feveral other com-teinds, mifions were appointed, with the more ample pnwers
of dividing large parihes, erecting new ones, \&c. all of which were, in 1707, transferred to the court of feffion, with this limitation, that no parifh hould be disjoined, nor new church erected, nor th noe removed to a new place, without the confent of threefourths of the heritors, computing the votes, not by their numbers, but by the valuation of their rents within the parifh. The judges of feffion, when fitting in that court, are confidered as a commiffion of parliament, and have their proper clerks, macers, and o. ther officers of court, as fich.
11. The low ft fipend that could be modified to a minitter by the firtt commiffion, was 500 merks, or five chalders of victual, unlefs where the whole teinds of the parifh did not extend fo far: and the highen was soco merks, or ten chalders. The parliament 1633 raifed the minimum to cight chalders of vietual, and proportionably in filver; but as neither the commiffion appointed by that act, nor any of the fubfequent ones, was limited as to the naximum, the commiffioners have been in ufe to augment flipends confiderably above the old maximum, where there is fufficiency of free teinds, and the cure is burdenfome, or living expenfive.
12. Where a certain quantity of fipend is modified to a minifter out of the teinds of a parif, without proportioning that ftipend among the feveral heritors, the decree is called a decree of modification: but where the commiffioners alfo fix the particular proportions payable by each heritor, it is a decree of modification and locality. Where a ftipend is only modified, it is fecured on the whole teinds of the parifh, fo that the minifter can infift againft any one heritor to the full extent of his teinds; fuch heritor being always intitled to rclief againt the reff for what he fhall have paid above his ju!t flare: but where the ftipend is al. fo localled, each heritor is liable in no more than his own proportion.
13. Few of the reformed miniters were, at fir A , provided with dwelling houfes; moft of the Popifh clergy having, upon the firft appearance of the reformation, let their manfes in feu, or in leng tacks: minifters therefore got a right, in 1563 , to as much of thefe manfes as would ferve them, notwithananding fuch feus or racks. Where there was no parfon's nor vicar's manfe, one was to he built by the heritors, at the fight of the bifhop, (now the prefbytery), the charge not excceding L. 1000 Scots, nor below 500 merks. Under a manfe are comprehtended ftable, barn. and byre, with a garden; for all which it is ufual to allow half an acre of ground.
14. Every incumbent is intitled at his entry to have bis manfe put in good condition; for which purpofe, the prefoytery may appoint a vifitation by tradefmen, and order eftimates to be laid before them of the fums neceffary for the ropairing, which they may proportion among the heritors according to their valuations. The prefbytery, after the manfe is made fufficient, ought, upon application of the heritors, to declare it a free manfe; which lays the incumbent under an obligation to uphold it in good condition during his incumbency, otherwife he or his executars fhalt be liahle in odmages; hut they are not hound to make up the lofuariling from the neceflary decay of the bulding by the wate of.time.
15. All miniters, where there is any landward or Law of country parifh, are, over and above their flipend, in. Scotland. tilled to a glebe, which comprehends four acres of a. rable land, or fixteen fowms of paiture-ground where there is no arable land (a fowm is what will graze ten fheep or one cow) ; and it is to be defigned or marked by the biflop or prefbytery out of fuch kirklands within the parih as lie nearell to the kirk, and, in default of kirk- lands, out of temporal lands.
16. A right of relief is competent to the heritors, whofe lands are fet off for the matife or glebe, againit the other heritors of the parin. Manfes and glebes, being once regularly defigned, cannot be feued or fol: 1 by the incumbent in prejudice of his fucceffors, which is in practice extended even to the cafe where fuch alienation evidently appearo profitable to the benefice.
17. Minifters, befide their glebe, are intitled to Gaff. grafs for a horfe and two cows. And if the lands, out of which the grafs may be defigned, either lie at a diftance, or are not int for pafture, the heritors are to pay to the minifter L. 20 Scots yearly as an equivalent. Minitters have alfo freedom of foggage, pafturage, fuel, feal, divot, loaning, and free ifh and entry, according to ufe and wont : but what thefe privileges are, mutt be determined by the local cultom of the Several parihes.
18. The legal terms at which fipends become due to munitters are Whiffunday and Michaelmas. If the rernis of incumbent be admitted to his church before Whitfun- तipents. day (till which term the corns are not prefumed to be fully fown), he has right to that whole year's ftipend; and, if he is received after Whitfunday, and before Michaelmas, he is intitled to the half of that year; becaufe, though the corns were fown before his entry, he was admitted before the term at which they are prefurned to be reaped. By the fame reafon, if be dies or is tranfported before Whitfunday, he has right to no part of that year; if before Michaelmas, to the half; and if not till after Micbaelmas, to the whole.
19. After the minifter's death, his executors lave right to the annat; which, in the fenfe of the canon law, was a right referved to the Pope, of the firit year's fruits of every bencrice. Upon a threatened invafion from England anns 154, the annat was given by our parliament, notwithtanding this riglt in the Pope, to the executors of fuch churchinen as thould fall in battle in defence of their country : but the word annat or ann, as it is now underithod, is the right which law gives to the executors of miniters, of half a year's benefice over and above what was due to the minitter himfelf for his incumbency.
20. The executors of a minititer nced make up no title to the ann by contrmation: nether is the right affignable by the miniter, or affectable with his edbes ; for it never belonged to him, but is a mere gratuity given by law to thefe whom it is prefunced the deceafed could not fufficiently provide; and law has given it expiefoly to executor's : and if were to he ga. verned by the rules of fucceffion in executory, the wi. dow, in cafe of no children, would get one half, the other would go to the next of kin; and where there are children, fhe would be intitled to a third, and the other two thiross would fall equally among the children. But. the coust of fiffion, probably led by the genera?

Juridicetion of billops.
practice, have in this lat cafe divided the ann into two equal parts, of which one goes to the widow, and the other among the children in capila.
22. From the great confidence that was, in the firft ages of Chriftianity, repofed in churchmen, dying perfons frequently committed to them the care of their eltates, and of their orphan children; but thefe were fimply rights of trut, not of jurifdiction. The clergy foon had the addrefs to eftablifh to themfelves a proper juridiction, not confined to points of ecclefiaflical right, but extending to queltions that had no concern with the church. They judged not only in teinds, patronages, teftaments, breach of vow, fcandal, \&c. but in queftions of marriage and divorce, becaufe marriage was a facrament; in tochers, becaufe thefe were given in confideration of marriage ; in all quefions where an oath intervened, on pretence that oaths were a part of religious wormip, Sec. As churchmen came, by the means of this extenlive jurif. diction, to be diverted from their proper functions, they committed the cxercife of it to their officials or commiffaries: hence the commiffary-court was called the Bi/bop's Court, and Curia Chriflianitatis; it was alfo tyled the Confiflorial Court; from confilfory, a name firlt given to the court of appeals of the Roman eniperors, and afterwards to the courts of judicature held by churchmer.
Conminif. fary.
23. At the reformation, all epifcopal jurifdiction, exercifed under the authority of the bifhup of Rome,
was abolifhed. As the courfe of jultice in confiltorial caufes was thereby Itopped, Q. Mary, befides naming a commiffary for every diocefe, did, by a fpecial grant, eflablifh a new commiffary-court at Edinburgh, confifting of four judges or commiffaries. This court is vefted with a double jurifdiction; one diocefan, which is exercifed in the fpecial territory contained in the grant, viz. the counties of Edinburgh, Haddington, Linlithgow, Pcebles, and a great part of Stirlingthire; and another univerfal, by which the judges confirm the teltaments of all who dit in foreign parts, and may reduce the decrees of all inferior commiffaries, provided the reduction be purfued within a year after the decree. Bifhops, upon their re-eftablifhment in the reign of James VI. were reftored to the right of naming their feveral commiffaries.
24. As the clergy, in times of Popery, affumed a jurifdiction independent of the civil power or any fecular court, their fentences could be reviewed only by the Pope, or judges delegated by him; fo that, with regard to the courts of Scotland, their juriddiction was fupreme. But, by an act 1560 , the appeals from our bifhops courts, that were then depending before the Roman confiltories, were ordained to be decided hy the court of feffion: and by a polterior act, 160 , the feffion is declared the king's great confiltory, with power to review all fentences pronounced by the commiffaries. Neverthelefs, fince that court had no inherent juifdiction in confitorial caufes prior to this Aa. tute, and fince the fatute gives them a power of judging only by way of advocation, they have not, to this day, any proper confitorial jurifaiction in the firf inflance; neither do thcy pronourice fentence in any confiftorial caufe brought from the commiffaries, but remit it back to them with inftructions. By the practice immediately fublequent to the act before quoted,
they did not admit advocations from the inferior com. miffaries, till the caufe was firlt brousht before the commiffaries of Edinburgh ; but that practice is now in difufe.
25. The commilfaries retain to this day an exclufive power of judging in declarators of marriage, and of the nullity of marriage ; in actions of divorce and of non-adherence, of adultery, baltardy, and confirmation of teltaments ; becaufe all thefe matters are flill confidered to be properly confiftorial. Inferior commiffaries are not competent to queltions of divorce, under which are comprehended queftions of baltardy and adherence, when they have a connection with the lawfulnefs of marriage, or with adultery.
26. Commiftaries have now no power to fromounce decrees in abfence for any fum above L. 40 Scots, except in caufes properly confiltorial: but they may authenticate tutorial and curatorial inventories; and all bonds, contracts, \&c. which contain a claufe for regiftration in the bodks of any judge competent, and protells on bills, may be regiftered in their books.

## Sect. VI. Of marriage.

Persons, when confidered in a private capacity, are chiefly dillinguifhed by their mucual relations; as hufband and wife, tutor and minor, father and child, mafter and fervant. The relation of bufband and Marriag wife is conftituted by marriage; which is the conjunction of man and wife, vowing to live infeparably till death.
2. Marriage is truly a contract, and fo requires the confent of parties. Idiots, therefore, and furious perfous, cannot marry. As no perfon is prefumed capable of confent within the years of pupillarity, which, by our law, lafts till the age of 14 in males, and 12 in females, marriage cannot be contracted by pupils; but if the married pair fhall cohabit after puberty, fuch acquiefcence gives force to the marriage. Marriage is fully perfected by confent ; which, without confummation, founds all the conjugal rights and duties. The confent requifite to marriage mult be de praferti. A promife of marriage (Jipulatio /ponfalitia) may be re.. filed from, as long as matters are entire; but if any thing be done by one of the parties, whereby a prejadice arifes from the non-performance, the party refiling is liable in damages to the other. The canonilts, and after them our courts of jullice, explain a copula fublequent to a promife of marriage into actual marriage.
3. It is not neceffary, that marriage fhould be cele- Formol brated by a clergyman. The confent of parties may celcbrat be deciared before any magiftrate, or fimply before witneffes: and though no formal confent thould appear, marriage is prefumed from the cohabitation, or living together at bed and board, of a man and wo. man who are generally reputed huband and wife. One's acknowledgment of his marriage to the midwife whom he called to his wife, and to the minilter who baptized his child, was found fufficient prefumptive evidence of marriage, without the aid either of colabitation, or of babile and repute. The father's confent was, by the Roman law, elfential to the marriage of children in familia: but, by our law, children may enter into marriage, without the knowledge, and even againt the remonttrances, of a facher.
4. Marriage is forbidden within certain degrees of otland. blood. By the law of Mnfes (Leevilicus xviii.), which, by the act 1567. c. 15 . has been adopred by us, feconds in blood, and all remoter degrees, may all lawfully marry. By feconds in blood are meant firt coufins. Marriage in the direct line is forbidden in infanitum; as it is alfo in the collateral line in the fpecial cal- where one of the partics is loco parentis to the other, as grand-uncle, great grand-uncle, \&c. with reSpect to his grand niece, \&c. The fame degrees that arc prohibited in confanguinity, are prohibited in affinity; which is the tie arifing from marriage, betwist one of the married pair, and the blood relations of the other. Marriage alfo. where either of the parties is naturally unfit for generation, or ftands already married to a third perfon, is ipfo jure null.
5. To prevent bigamy and inceltuous marriages, the chuch has introduced proclanation of banns; which is the ceremony of publifhing the names and defignations of thofe who intend to intermarry, in the churches where the bride and bidegroom refide, after the congregation is affembled for divine fervice; that all perfons who know any objection to the marriage may offer it. Whien the order of the church is ob ferved, the marriage is called regulur; when otherwife, clandefine. Marriage is valid when entered into in either of thefe ways; but when clandefline, there are certain penalties impofed upon the parties as well as the celebrator and witneffes.
6. By marriage, a fociety is created between the married pair, which draws after it a mutual communication of their civil interefts, in as far as is neceflary for maintaining it. As the fociety lafts only for the joint lives of the focii ; thercfore rights that have the nature of a perpetuity, whieh our law Ayles beriable, are not brought under the partnerfhip or commurion of goods: as a land-eftate, or bonds bearing a yearly intereft : it is only moveable fubjects, or the fruits produced by heritable fubjects during the marriage, that become common to man and wife.
7. The humand, as the head of the wife, has the fole right of managing the gooos in communion, which is called jus mariti. This right is fo abfolute, that it bears but little refemblance to a right of adminittering a common fubject. For the hufband can, in virtue thereof, fell, or even gift, at his pleafure, the whole goods falling under communion; and his creditors may affect them for the payment of his proper debts: fo that the jus mariti carries all the characters of an affignation, by the wife to her hufband, of her moveable eftate. It arifes ipfo jure from the marriage; and therefore needs no other contlicution. But a itranger may convey an eftate to a wife, fo as it thall not be fubject to the huband's adminiftration; or the hufband himfelf nay, in the marriage-contraet, renounce his jus mariti in all or any part of his wife's moveable eflate.
8. From this right are excepted paraphernal goods, which, as the word is undertoon in our law, comprehends the wife's wearing apparel. and the ornaments proper to her perfon; as necklaces, ear-ringe, brealt or arm jewels, buckles, Acc. Thele are neither alienable by the hufband, nor affcctable by his creditors. Things of promifcuous ufe to hurband and wife, as plate, medals, \&cc. may become paraphernal, by the
hufband's giving them to the wife, at or before marriage; but they are paraphernal only in regard to that hufand who grave then as fuch, and are elleemed common moveables, if the wife, whofe parupbernalia they were, be afterwards married to a fecond hufband.; unleis he fhall in the fame manner appropriate them to her.
9. The right of the hufband to the wife's moveable Burdens afeftate, is burdened with the moveable debts contracted fecting the by her before marriage: and as lis right is univerfal, jus murititio fo alfo is his burden; for it reaches to her whole moveable dehts, though they fhould far exceed her moveable eftate. Yet the hulband is not confidered as the true dehtor in his wife's debts. In all actions for paymeut, the is the proper defender: the hufband is only ciced for his interell, that is, as curator to her, and adminiftratur of the fociety-goods. As from there. fore as the marriage is diffolved, and the fociety. groods thereby fuffer a divifion, the hufoand is no falther concerned in the fhare belonging to his deceafed wife; and confequently is no longer liable to pay her debts, which mult be recovered from her reprefentatives, or her feparate eftate.
10. This obligation upon the hufbane is, however, How experpetuated againft him (r.) Where his proper eftate, tended areal or perfonal, has been affected, during the marriage, gaint the by complete legal diligence ; in which cafe, the hufo hufland. band mutt, by the common rules of law, relieve his property from the burden with which it flands charged: but the utmolt diligence againft his perfon is not fufficient to perpetuate the obligation ; nor even incomplete diligence againt his eftate. (2.) The huband continues liable, even after the wife's death, in for Ear as he is lucratus or profited by her cflate: Scill, however, the law does not confider a hufband who has got but a moderate tocher with the wife'as lucratus by the marriage ; it is the excefs only which it conliders as lucron, and that muft be eftimated by the quality of the parties and their condition of life.-As the was at no time the proper debtor in his wife's moveable debts; therefore, though he fhould be hucratus, he is, after the diffolution, only liable for them fulffiliarie, i. è. if her own feparate eflate is not fufficient to pay them off.
11. Where the wife is debtor in that fort of deht, which, if it had been due to her, would have exclu Jed the jus mariti, e. g. in bonds bearing interelt, which, as we thall afterwards fee (clxiii. 4.), continues heritable as to the rights of hurband and wife, notwithtanding of the enactment of the flatuce 1661 , which renders them moveable in certain other refpects, the huband is liable only for the bygone interefts, and thofe that may grow upon the debt during the marriage: hecaufe his obligation for her debts mat the commenfurated to the interef he has in hor eflate. It is the lufband alone who is liable in perfonal diligence for his wife's debts, while the marriage fubghts: the wife, who is the proper debtur. is free from all perfonal execution upon them while fhe is veflita viro.
12. The lufband by marriage becomes the perpe. The huf tual curator of the wife. From this right it arifes, band is the 1. That no fuit can proceed againlt the wife till the wife's curbs hufoand be cited for his interett. 2. All deeds, done tor. by a wife without the hufband's confent, are null; neither can fle fue in any action without the hufbard's

Law of
Scotland.

Seraratealimony.

What obligations of the wife va lid.

Intibition againta wife.
cencurrence. Yet where the hufband refules, or by reafon of forfeiture, \&c. cannot concur; or where the action is to be brought againft the hufband himfelf, for performing his part of the marriage articles; the judge will authorife her to fue in her own name. The effects arifing from this curatorial power difcover themfelves even before marriage, upon the publication of banns; after which the bride, being no longer fui juris, can contract no debt, nor do any deed, either to the prejudice of her future huband, nor even to her own. But in order to this, it is neceffary that the banns flall bave been publifhed in the bride's parilb-church as well as in that of her hufband.
13. If the humband fhould either withdraw from his wife, or turn her out of doors; or if, continuing in family with her, he fhould by fevere treatment endanger her life; the commiflaries will anthorife a feparation a menfa et thoro, and give a feparate alimony to the wife, fuitable to her hufband's eftate, from the time of fuch feparation until either a reconciliation or a fentence of divorce.
14. Certain obligations of the wife are valid, notwithıtanding her being. fub cura marili; ex. gr. obli gations arifing from delict; for wives have no privilege to commit crimes. But if the punifhment refolves into a pecuniary mulet, the exccution of it muft, from her incapacity to fulfil, be fufpended till the diflolution of the marriage, unlefs the wife has a feparate eftate exempted from the jus mariti.
15. Obligations arifing from contract, affect either the perfon or the eflate. The law has been fo careful to proted wives while fou cura marita, that all perfonal obligations granted by a wife, though with the hufband's confent, as bonds, bills, \&c. are null; with the following exceptions: ( $t$.) Where the wife gets a feparate peculium or ftock, either from her father or a ftranger, for her own or her children's alimony, the may grant perfonal obligations in relation to fuch flock: and by flronger reafon, perfonal obligations granted by a wife are good, when her perfon is actually withdrawn from the hufband's power by a judicial feparation. (2.) A wife's perfonal obligation, granted in the form of a deed inter vivos, is valid, if it is not to take effect till her death. (3.) Where the wife is by the hufband prapofita negotiis, intrufted with the management either of a particular branch of bufinefs or of his whole affairs, all the contracts fie enters into in the exercife of her prapofitura are effectual, even though they be not reduced to writing, but floould arife mere. ly ex re, from furnifhings made to her: but fuch obligations have no force againgt the wife; it is the hufband only, by whofe commiffion the acts, who is thereby obliged.
16. A wife, while the remains in family with her hufband, is confidered as prapofita negotiis domeficis; and confequently may provide things proper for the family; for the price whereof the huband is liable, tho' they fhould be mifapplied, or though the hufband fhould bave given her money to provide them elfewhere. A hufband who fufpects that his wife may hort his fortune by high living, may ufe the remedy of inhibition againtt her; by which all perfons are interpelled from contracting with her, or giving her credit. After the completing of this diligence, whereby the frapenfura falls, the wife cannot bind the hufband, unP1 177.
lefs for fuch reafonable furnithings as he cannot initruct that he provided her with aliunde. Asevery man, and confequently every hufband, has a right to temove his managers at pleafure, inhibition may pals at the fuit of the hufband againit the wife, though he fhould not offer to juftify that mealure by an actual proof of the extravagance or profufion of her temper.
17. As to rights granted by the wife affecting her Rights a eflate ; fle has no moveable eftate, except her para.fectingh plocrnalia; and thefe the may alien or impignarates eflate. with confent of the hufband. She can, without the hufband, bequeath by teftament her fhare of the goods in communion ; but fhe cannot difpufe of them inter vivos; for fhe herielf has no proper right to them while the marriage fublifts. A wife can lawfully oblige herfelf, in relation to her heritahle eftate, with confent of her hufband: for though her perfon is in fome fenfe funk by the marriage, the continues capable of holding a real effate; and in fuch obligations her eftate is confidered, and not her perfon. A hufband, though he be curator to his wife, can, by his acceptance or intervention, authorife rights granted by her in his own favour: for a huband's curatory differs in this refpect from the curatory of minors, for it is not merely intended for the wife's advantage, but is confidered as a mutual benefit to both.
18. All donations, whether by the wife to the huf. Donation band. or by the hufband to the wife, ate revocable by revocabl the donor; but if the donor dies without revocation, cable. the right becomes abfolute. Where the donation is not pure, it is not fubject to revocation: thus, a grant made by the hufband, in confequence of the natural obligation that lits upon him to provide for his wife, is not revocable, unlefs in fo far as it exceeds the meafure of a rational Cettlement ; neither are remuneratory grants revocable, where mutudl grants are made in con. fideration of each other, except where an onerous canfe is fimulated, or where what is given binc inde bears no proportion to each other. All voluntary contracts of feparation, by which the wife is provided in an yearly alimony, are effectual as to the time pait, but revocable either by the hufband or wife.
19. As wives are in the ftrongeft degree fubject to Ratificat the influence of their hufbands, third parties, in whofe by wives favous they had made grants, were frequently vexed with actions of reduction, as if the grant had been extorted from the wife through the force or fear of the hufband. To fecure the grantees againft this danger, ratifications were introduced, whereby the wife, appearing before a judge, declares upon oath, her hul: band not prefent, that the was not induced to grant the deed ex vi aut metu. A wife's ratification is not ablolutely neceffary for fecuring the grantee: law indeed ailows the wife to bring reduction of any deed fic has not ratified, upon the head of force or fear; of which, if the bring fufficient evidence, the deed will be fet afide; but if fhe fails in the proof, it will remain effectual to the receiver.
20. Marriage, like other contracts, might, by the Diffoluti Roman law, be diffolved by the contrary confent of of marparties; but, by the law of Scotland, it cannot be dif-riage. folved till death, except by divorce, procecding either upon the head of adultery or of wilful defertion.
21. Marriage is difolved by death, either within frar an 1 day from its being contracted, or affer year and.
and day. If it is diffolved within year and day, all rights granted in confideration of the marriage (unlefs guarded againft in the contract) become void, and things return to the fame condition in which they flood before the marriage; with this reltrietion, that the hufband is confidered as a bona fide poffeffor, in relation to what he has confumed upon the faith of his right; but he is liable to repay the tocher, without any deduction, in contideration of his family-expence during the marriage. If things cannot be reftored on both fides, equity linders the reforing of one party and not the other. - In a cate which was lately before the court of feffion, it was determined, after a long hearing in prefence, that where a marriage had been difolved within the year without a living child, by the death of the hufband, the widow was intitled to be alimented out of an effate of which he died poffeffed, though there were no conventional provifions llipulated in favour of the wife.
22. Upon the diffolution of a marriage, after year and day, the furviving huband becomes the irrevocable proprietor of the tocher; and the wife, where fhe furwives, is intitled to her jointure, or to her legal provifions. She has alfo right to mournings, fuitable to the hufband's quality; and to alimony from the day of his death till the term at which her liferent provifion, either legal or conventional, commences. If a living child be procreated of the marriage, the marriagc has the fame effect as if it had fubfifted beyond the year. A day is adjected to the year, in majorem evidentiam, that it may clearly appear that the year itfelf is clapfed; and therefore, the running of any part of the day, after the year, has the fame effect as if the whole were elapfed. The legal right of courtefy competent to the furviving hufband is explained below, $\mathrm{N}^{\circ}$ clex. 28.
23. Divorce is fuch a feparation of married perfons, during their lives, as loofes them from the nuptial tie, and leaves them at freedon to intermarry with others. But neither adultery, nor wilful dcfertion, are grounds which muft neceffarily diffolve marriage ; they are only handles, which the injured party may take hold of to be free. Coliabitation, therefore, by the injured party, after being in the knowledge of the acts of aduitery, implies a paffing foom the injury ; and no divorce can proceed, which is carried on by collufion betwixt the parties, left, contrary to the firit inlitution of marriage, they might difengage themfelves by their own confent : and though, after diverce, the guilty perfon, as well as the innocent, may contract fecond mariages ; yet, in the cafe of divorce upon adultery, marriage is by fpecial flatute ( 1600 c. 20 .) prohibited betwixt the two adulterers.
24. Where either party has deferted from the other for four years tugether, that other may fue for adherence. If this has no effect, the church is to proceed, firt by admonition, then by excommunication; all which previous fteps are declared to be a fufficient ground for purfuing a divorce. De praxi, the commiffaries pronounce femtence in the adherence, atter one year's defertion; hut four years mult intervene between the firft defertion and the decree of divorce.
25. The legal effects of divorce on the head of defettion are, that the offending hufband thall rellore the socher, and forfeit to the wife all her provifions, legal Vol. IX. Part II.
and conventional; and, on the other hand, the offending wife fhall forfeit to the hufband her tocher, and all the rights that would have belonged to her is the cafe of her furvivance. This was alfo elteemed the rule in divorces upon adultery. But by a decifion of the court of feffion : 662 , founded on a tract of ancient decilions recovered from the records, the offending lufband was allowed to retain the tocher.

## Sect. VII. Of Minors, and their tutors and curators.

cixi. 1

1. The fages of life principally diftinguifhed in Pupillarity, law are, pupillarity, puberty or minority, and majority. \&c. A child is under pupillaity, from the birth to 14 years of age if a male, and till 12 if a female. Minority begins where pupillarity ends, and continues till majority; which, by the law of Scotland, is the age of 21 years complete, both in males and females: but minority, in a large fenfe, includes all under age, whether pupils or puberes. Becaufe pupils cannot in any degree act for themfelves, and minors feldom with difcretion, pupils are put by law under the power of tutors, and minors may put themfelves under the direction of curators. Tutory is a power and faculty to Tutors govern the perfon, and adminifter the eftate, of a pupil. Tutors are either nominate, of law, or dative.
2. A tutor nominate is he who is named by a father, in his teftament or other writing, to a lawful child. Such tutor is not obliged to give caution for tbe faithful difcharge of his office; becaufe his fidelity is prefumed to have been fufficiently known to the father.
3. If there be no nomination by the father, or if the tutors nominate do not accept, or if the nomination falls by death or otherwife, there is place for a tutor of law. This fort of tutory devolves upon the next agnate; by which we undertand he who is nearef Agnates related by the father, though females intervene.
4. Where there are two or more arnates equally near to the pupil, he who is intitled to the pupil's legal fucceffion falls to be preferred to the others. But as the law fufpects that he may not be over careful in preferve a life which flands in the way of his own intereft, this fort of zutor is excluded from the cultody of the pupil's perfon; which is commonly commitred to the mother, while a widow, uncil the pupil be feven years old; and. in default of the mother, to the next cog. nate, i. e. the righeft relatiun by the mother. The tutor of law mult (by act 1474) be at leall 25 years of age. He is ferved or declared by a jury of fworn men, who are called upon a brief iffung from the chancery, which is directed to any judge haviug juridiction. He mult give fecurity before he enters upon the mauagement.
5. If no tutor of law demands the office, any pero fon, even a Atranger, may apply for a tutory-dative. But becaufe a tutor in la e ought to be allowed a competent time to deliberate whether he will levve or not, no tutory dative can be given till the elaptire of a year from the time at which the tutor of haw hat firt a right tu ferve. It is the king alone, as the father of his country, who gives tutors-dative, by his court of exchtquer; and by act 1672 , no gilt of tutory can pals in exchequer, without the citation or confent of 40 para

Law of the next of kin to the pupil, both by the father and Scotland. mother, nor till the tutor gire fecurity, recorded in the books of exchequer. There is no room for a tutor of law, or tutor-dative, while a tutor-nominate can be hoped for: and tutors of law, or dative, even after they have begun to act, may be excluded by the tutornominate, as foon as he offers to accept, unlefs he has exprefsly renounced the office. If a pupil be without tutors of any kind, the court of feffion will, at the fuit of any kinfman, name a factor (fteward) for the management of the pupil's eflate.
6. After the years of pupillarity are over, the minor is conlidered as capable of aeting by himfelf, if he has contidence enough of his own capacity and prudence. The only two cares in which curators are impofed upon minors are, (i.) Where they are named by the father, in a thate of health. (2.) Where the father is himfelf alive; for a father is iffo jure, with. out any fervice, adminillrator, that is, both tutor and curator of law, to his children, in relation to whatever eflate may fall to them during their minority. This right in the father does not extend to grandehildren, nor to fuch even of his immediate children as are forisfamiliated. Neither has it place in fubjects which are left by a tranger to the minor, exclufive of the father's adminiltration. If the minor clioofes to be under the direction of carators, he mut raife and execute a fummoris, citing at leaft two of his next of kin to appear before his own judge-ordinary, upon nine days warning (by aet 1555.) At the day and place of appearance, be offers to the judge a lift of thofe whom the intends for his curators: fuch of them as refolve to undertake the office muft fign their acceptance, and give caution; upon which an act of curatory is extracted.
7. Thefe curators are Ayled ad negotia; to diftinguifh them from another fort called curators ad lites, who are euthorifed by the judge to fconcur with a pupil or minor in actions of law, either where he is without tutors and curators, or where bis tutors and curators are parties to the fuit. This fort is not obliged to give caution, becaufe they have no intermeddling with the minor's eftate : they are appointed for a fpecial pur-

Who debarred from tutory and curators. pofe; and when that is over, their office is at an end. Women are capable of being tutors and curators, under the following reflictions: (1.) The office of a female tutor or cirrator falls by her marriage, even though the nomination fhould provide otherwife; for the is no longer fui jurris, and incapable of courfe of having another under her power. (2.) No woman can be tutor of law. Papits are (by act 1700 ) declared incapable of qutory or curatory. Where the minor has more tutors and curators than one, who are called in the nomination to the joins management, they mult all concur in every ait of adminiftration; where a certain number is samed for a quorum, that number mult concur: where any one is named fine quo non, no act is valid without that one's special concurreace. Dut if they are named without any of thefe limitations, the concurrence of the majority of the nominees then alive is fufficient.
Bifference
8. In this, tutory differs'from curatory; that as pupils are incapable of confent, they have no perfon capable of acting; which defect the tutor fupplies : but a minor qubes catn act for bimfelf. Hence, the tutor
fublcribes alone all deeds of adminitration : but in cu. ratory, it is the minor who lubfcribes as the proper party; the curator does no more than confent. Hence allo, the perfons of pupils are under the power either of their tutors or of their nearef cognates; but the minor, after pupillarity, has the difpofal of his own perfon, and may refide where lie pleafes. In moit other paticulars, the nature, the powers, and the duties of the two offices coincide. Both tutors and curators Judici muft, previous to their adminill ration, make a judicial veno. inventory, fubforibed by them and the next of kin, be. fore the minor's judge-ordinary, of his whole eflate perfonal and real; of which, ore fubferibed duplicate is to be kept by the tutors or culator8 themfelves; another, by the next of kin on the father's fide; and a third, by the next of kin on the mother's. If any eflate belonging to the minor hall! afterwards come to their knowledge, they mult add it to the inventory within two months after their attairing poffeftion thereuf. Should they weytect this, the minur's dehtors are not obliged to make payment to them: they may be removed from their offices as fufpected; and they are intitled to no allowance for the fums dilburfed by them in the minor's affairs (act $\mathbf{1 6 7 2}$ ), except the expence laid out upon the minor's entertainment, upon his lands and houfes, and upon completing his titles.
9. Tutors and curators cannot grant leafes of the minor's lands, to endure longer than their own office; nor under the former rental, without either a warrant from the couit of feflion, or fome apparent neceffity.
10. They have power to fell the minor's moveables; but cannot fell thcir pupil's land-eftate, without the anthority of a judge, yet this reftraint reaches not to fuch alienations as the pupil could by law be compelled to grant, e. g. to renunciations of wadfets upon rellemption by the reverfer: for in fuch cafe, the very tenor of his own right lays him under the obligation ; nor to the renewal of charters to heirs; bu: the clarter muft contain no new right in favour of the heir. The alienation, however, of heritage by a minor, with confent of his curators, is valid.
if. Tutors and curators cannot, contrary to the oature of their truft, authorife the minor to do any deed for their own benefit ; nor can they acquire any debt affecting the minor's eftate : and, where a tutor or curator makes fuch acquifition, in his own name, fur a lefs fum than the right is intitled to draw, the beoefit thereof accrues to the minor. It feems, however, that fuch purehafe would be confidered as valid, provided it were bona fide acquired at a public fale; for in fuch. eafe it occurs that the tutor or curator is in fact meliorating the fituation of his ward $\mathrm{b} \because$ enhancing the value of his property by a fair comperition. In general, it feems to be the genius and !pirit of our law, that tutors and curators fhall do every thing in their power towards the faithful and proper difcharge of their refpective offices.
12. By the Roman law, tutory and curatory, being munera publica, might be forced upon every one who had not a relevant ground of excufe: but, with us, the perfons named to thefe offices may either accept or decline: and where a father, in liege pouflie (when in a ftate of health), names certain perions both as tutors and curators to his children, though they have acted
of as tutor8, they may decline the office of curatory. Tu.
and. tors and curators liaving once accepted, are liable in diligence, that is, are accountable for the confequences of their neglect in any part of their duty from the time of their acceptance. They are accourtable finguli in folidum, i. e. every one of them is anfwerable, not only for his own diligence, but for that of his co-tutors; and any one may be fued without ciling the rell: but he who is condcmned in the whole, has action of relief againft his co-turors.
13. From this ubligation 10 diligence, we may cxcept, (1.) Fathers or adminifrators in law, who, from the prefumption that they act to the belt of their power for their children, are liable only for actual intromiffions. (2.) Tusors and curators named by the father in confequence of the act 1696 , with the fpecial provifos, that they flall be liable bartly for intro. miffions, not for omiffions; and that each of them thall be liable only for himfelf, and not in folidum for the co-tutors : but this power of exemption from dili sence is limited to the eftate defeending from the father him. felf. Tutors or curators are not intitled to any fulary or allowance for pains, unlefs a falary has been expref.ly contained in the teftator's nomination ; for their office is prefirmed gratuitous.
14. Though no perfon is obliged to accept the office of tutor or curator; yet having once accepted, he cannot throw it up or renounce it without fufficient caufe ; but, if he fhould be guilty of mifapplying the minor's money, or fail in any other part of his duty, - he may be removed at the fuit of the minor's next in kin, or by a co-tutnr or co-curatcr. Where the mif. conduct procceds merely from indolence or inattention, the court, in place of removing the tutor, either join a curator with him, or, if he be a tutor-nominate, they oblige him to give cautiou for his paft and future management.
15. The offices of tutory and curatory expire alfo by the pupil's astaining the age of puberty, or the minor's attaining the age of $2 t$ years complete; and by the death either of the minor, or of his tutor and curator. Curatory alfo expires by the marriage of a female minor, who becomes thereby under the coverture of her own huiband. After expiry of the office, reciprocal actions lie at the inftance both of the tutors and curators, and of the minor. That at the inflance of the minor is called adio tutela directu, by which he can compel the tutors to account; that at the inflance of the tutors, acio tutele contraria, by which the minor can be compelled to repeat what has been protitably expended during the adminitration: but this laf does not lie till after accounting to the minor; for till then the tutors are prefumed intus babere to have effects in their own hands for anfwering their difburfements.
16. Deeds either by pupils, or by minors having curators without their confent, are null; but they oblige the granters, in as far as, relates to fums profitably applied to their ufe. A minor under curators can indeed make a teftament by himfelf; but whatever is executed in the form of a deed intor vivos, requires the curator's confent. Deeds by a minor who lias no cura. tors, are as effectuak as if he had had curators, and figned them with their confent; he may even alien his heritage, without the interpofition of a judge.
17. Minors may be rellored againit all deeds grant-

A W.
ed in their minority, that are hurtful to them. Decels, in themfelves void, need not the remady of reflitution; but where hustful deeds are granted by a tutor in his pupil's affairs, or by a minor who has no curators, as thefe deeds fubfit in law, reftitution is neceflary : and even where a minor, havinge curaturs, crecutes a deed hureful to himfelf with their confont, lee has not only action againt the curators, but he has the benefit of reltitution againlt the deed itfelf. The minor canoot be reftored, if he does vot raife and execute a fummons for reducing the deed, ex capite mimorennilatis at laf:onis, before he be 25 years old. Thefe four years, between the age of 2 t and 25 , called quadricmium wihe, are indulged to the minor, that lie may have a reafonable time, from that period, when he is firlt prefamed to have the perfoct ufe of his teafon, to contider with hinfelf what deeds done in lis minority have been truly prejudicial to him.
18. Queflions of reflitution are proper to the court le regui. of feffion. Two things mult be proved by the minor, fites. in order to the reduction of the deed: (1.) That he was minor when it was figned; (2.) That he is hurt or lefed by the deed. This lefion muk not proceed merely from accident ; for the privilege of reltitution was not intended to exempt minors from the com:non misfortuncs of life; it mult be owing to the imprudence or negligence of the minor, or his curator.
19. A minar canuot be reftored againft his own de. liet or fraud; e. $\sigma$. if he hould induce one to bargain with him by Caying he was major. (2.) Relliution is excluded, if the minor, at any time after majority, has approved of the decd, either by a formal ratification, or tacitly by payment of interet, or by other akts inferring approhation. (3.) A minor, who has taken himfelf to bufinefs, as a merchant.fhopkerper, \&ec. cannot be reftured againft any deed granted by him in the courfe of that bufinefs, efpecially if he was proximus majorennitati at figning the deed. (4.) According to the more common opinion, a minor cannot be reftored in a queftion againfl a minor, unlef fome grofs unfaimefs fhall be qualifed in the bargain.
20. The privilege of rellitution does not always die with the minor himfelf. ( t .) If a minor fucceeds to a minor, the time allowed for reflitution is governed by the minority of the heir, not of the anceftor. (2.) If a minor fucceeds to a major, who was not full 25 , the privilege continues with the heir during his minority; but he cannot avail himfelf of the anni wiles, exctpt in fo far as they were unexpired at the anceltor's death. (3.) If a major fucceeds to a minor, he lias only the quadriennium utile after the minor's death: and if he fucceeds to a major dying within the quadiennium, no more of it can be profitable to him than what remained when the anceftor died.

21 . No minor can be compelled to tare limfelf as a defender, in any action, whereby his heritable eltate flowing from afcendants may be evicted from him, by one pretending a preferable right.
22. This privilege is intended merely to fave minots from the neceflity of difputing upon queftions of preference. It does not therefore take place, (1.) Where the action is purfued on the father's falfehood or delict. (2.) Upun his obligation to convey heritage. (3.) On his liquid bond for a fum of money, theugh fuch action hould have the effect to carry off the minos's 4 O 2 eftate.

Law of Scottand.
eflate by adjudication. (4.) Nor in actions purfued by the minor's fuperior, upon feudal cafualcies. (5.) This privilege cannot be pleaded in bar of an action which had been firt brought againft the father, and is only continued againt the minor; nor where the father was not in the peaceable poffeffion of the heritable fubject at his death. Before the minor can plead it, he mult be ferved heir to his father. The perfons of pupils are by faid act 1696 protected from imprifonment on civil debts.

Curators of idiots and furious perfons.

Intercuic-
tion.
23. Curators are given, not only to minors, hut in general to every one who, either through defect of judgment, or unfitnefs of difpofition, is incapable of rightly managing his own affairs. Of the frif fort, are idiots and furious perfons. Idiots, or fatui, are ens tirely deprived of the faculty of reafon. The diftemper of the furious perfon does not confift in the defect of reafon; but in an overheated imagination, which ohfructs the application of reafon to the purpofes of life. Curators may be alfo granted to lunatics; and even to perfons dumb and deaf, though they are of found judgement, where it appears that they cannot exert it in the management of bufinefs. Every perfon, who is come of age, and is capable of acting rationally, has a natural right to conduct his own affairs. The only regular way, therefore, of appointing this fort of curators, is by a jury fummoned upon a brief from the chancery; which is not, like the brief of common tutory, directed to any judge-ordinary, but to the judge of the fpecial territory where the perfon alleged to be fatuous or furious refides; 3that, if he is truly of found judgement, he may have an opportunity to oppofe it: and for this reafon, he ought to be made a party to the brief. The curatory of idiots and furious perfons belongs to the nearelt agnate ; but a father is preferred to the curatory of his fatuous fon, and the hufband to that of his fatuous wife, before the agnate.
24. A claufe is inferted in the brief, for inquiring how long the fatuous or furious perfon has been in that condition; and the verdict to be pronounced by the inqueft has a retrofpective effect ; for it is declared a fufficient ground, without further evidence, for reducing all deeds granted after the period at which it appeared by the proof that the fatuity or furiofity began. But, as fatuous and furious perfons are, by their very flate, incapable of being obliged, all deeds done by them may be declared void, upon proper evidence of their fatuity at the time of figning, though they fhould never have been cognofced idiots by an inquelt.
25. We have fome few inftances of the fovereign's giving curators to idiots, where the next agnate did not claim; but fuch gifts are truly deviations from our law, fince they pafs without any inquiry into the tate of the perfon upon whom the curatory is impoled. Hence the curator of law to an idiot, ferving quandocunque, is preferred, as foon as he offers himfelf, before the cura-tor-dative. This fort of curatory does not determine by the lucid intervals of the perfon fub cura; but it expires by his death, or perfect return to a found judgement ; which laft ought regularly to be declared by the fentence of a judge.
26. Perfons, let them be ever fo profufe, or liable to be impofed upon, if they have the exercife of reafon, can cffectually oblige themfelves, till they are fettered by law. This may be done by Interdicion, which is
a legal reftraint laid upon fuch perfons from figning Law any deed to their own prejudice, without the confent scotla of their curators or interdictors.
27. There could be no interdiction, by our ancientpractice, without a previous inquiry into the perfon's condition. 'But as there were few who could bear the fhame that attends judicial interdiction, however neceflary the reftraint might have been, voluntary interdiction has received the cumntenance of law; which is generally executed in the form of a bond, whereby the granter obligts himfelf to do no deed that may affect his eftate, without the confent of certain friends therc. in mentioned. Though the reafons inductive of the bond thould be but gently tonched in the recital, the interdiction ftands good. Voluntary interdiction, tho' it be impofed by the fole act of the perfon interdicted, cannot be recalled at his pleafure : but it may be take! off, (1.) By a fentence of the court of feffion, decla. ring, either that there was, from the begुinning, no fufficient ground for the reftraint; or that the party is, fince the date of the bond, become rei fui providus. (2.) It falls, even without the authority of the lords, by the joint act of the perfon interdicted, and his interdictors, concurring to take it off. (3) Where the bond of interdiction requires a certain number as a quorum, the reftraint ceafes, if the interdictors fhall by death be reduced to a leffer number.
28. Judicial interdiction is impofed by a fentence of the court of feffion. It commonly proceeds on an action brought by a near kinfman to the pasty; and fomt times from the nobile officium of the court, when they perceive, during the pendency of a fuit, that any of the litigants is, from the facility of his temper, fubject to impofition. This fort muft be taken off by the authurity of the fame court that impofed it.
29. An interdiction need not be ferved againt the Regift perfon interdicted; but it muft be executed, or pub-tion of lifhed by a meffenger, at the market crufs of the ju-terdiefi rifdiction where he refides, by publicly reading the interdiction there, after three oyeffes made for convocating the lieges. A copy of this execution muft be affixed to the crofs; and thereafter, the interdiction, with its execution, mult (by the act 1581 ) be regiftered in the books both of the jurifdiction where the perfon interdicted refides and where his lands lie, or (by the act 1600) in the general regifter of the fcffion, within 40 days from the publication. An interdiction, before it is regiftered, has no effect againft third parties, tho' they Thould be in the private knowledge of it ; but it operates againit the interdictors themfelves, as foon as it is delivered to them.
30. An interdiction, duly regiftered, has this effect, Effects that all deeds done thereafter, by the perfon interdicted, without the confent of his interdictors, affecting his heritable eftate, are fubject to reduction. Regiftration in the general regifter fecures all his lands from alienation, wherever they lie; but where the interdiction is recorded in the regifter of a particular fhire, it covers no lands except thofe fituated in that fhire. But perfons interdicted have full power to difpofe of their moveables, not only by teltament, but by prefent deeds of alienation: And creditors, in perfonal bonds granted after interdiction, may ufe all exccution againft their debtor's perfon and moveable eftate: fuch bonds being only fubject to reduction in fo far as di-
aw of ligence againk the heritable eftate may procesd upon them.
31. All onerous or rational deeds granted by the perfon interdicted, are as effectual, even without the confent of the interdictors, as if the granter had been laid under no reflraint; but he cannot alter the fucceffion of his heritable eflate, by any fettlement, let it be ever fo rational. No deed, granted with confent of the interdictors, is reducible, though the ftrongeft lefion or prejudice to the granter hould appear: the only remedy competent, in fuch cafe, is an action by the granter againft his interdictors, for making up to him part of the duty of interdietors, to receive fums or ma nage any eftate; they are given merely ad autoritatem praflandam, to interpofe their authority to reafonable deeds: and fo are accountable for nothing but their fraud or fault, in confenting to deeds hurtful to the perfon uncer their care.
32. The law concerning the ftate of children falls next to be explained. Children are either born in wed. come, according to the general opinion, theirown mafers: and from that period are bound to the father only by the natural ties of duty, affection, and gratitude. The mutual obligations between parents and children to maintain each other, are explaised afterwards, $\mathrm{N}^{\circ}$ clsxiii. 4 .
33. Children born out of wedlock, are ftyled natıral children, or baftards. Battards may be legitimated or made lawful, (1.) By the fubfequent intermarriage of the mother of the child with the father. And this fort of legitimation intitles the child to all the rights of lawful children. The fubfequent marsiage, which produces legitimation, is confidered by the law to have been entered into when the child legi.
timated was begotten ; and lience, if he be a male, he excludes, by his right of prinogeniture, the fons pro. created after the marriage, from the fucceffion of the father's heritage, though thefe fons were lawful children from the birth. Hence, alfo, thofe children only can be thus legitimated, who are begotten of a woman whom the father might at that period lave lawfully married. (2.) Baftards are legitimated by letters of legitimation from the fovereign. $\mathrm{N}^{\circ}$ clxxxii. 3 .
34. As to the power of mallers over their fervants: Seryants, All fervants now enjoy the fame rights and privileges with other fuojects, unlefs in fo far as they are tied down by their engagements of fervice. Servants are either neceflary or voluntary. Neceffary are thofe

long are not fufficient for theit maintenance, thecy are

[^25]Children, afier their full age of twenty-one years, be-
lock, or out of it. All children, born in lawful manriage or wedlock, are prefumed to be begotten by the perfon to whom the mother is married; and confequently to be lawful children. This prefumption is fo ftrongly founded, that it cannot be defeated but by direct evidence that the mother's hufband conld not be the father of the child, e. g. where he is impotent, or was ablent from the wife till uithin fix lunar month of the birth. The canonift indeed maintain, that the concurring teftimony of the hufband and wife, that the child was not procreated by the huiband, is fufficient to elide this legal prefumption for legitimacy : but it is an agreed point, that no regard is to be paid to fuch teftimony, if it be made after they have owned the child to be theirs. A father has the abfolute right of difpofing of his childrens perfon, of directing their education, and of moderate chaffifement; and even after they become puberes, he may compel them to live in family with him, and to contribute their labour and induftry, while they continue there, towards bis fervice. A child who gets a feparate flock from the father for carrying on any trade or employment, even though he Thould continue in the father's houfe, may be faid to be emancipated or forisfamiliated, in fo far as concerns that flock; for the profits arifing from it are his own. Foriofamiliation, when taken in this fenfe, is alfo inferred by the child's marriage, or by his lising in a feparate houfe, with his father's perniffion or gond-will.

Law of Scotland.
to rective badges from the miniliter and kirk-fefino in virtue of which they may afk alms at the dwellingl:oufes of the inhabitants of the parith.

> C II P. II.
> Of THINGs.

THE things, or fuojects, to which perfons lave Hoht, are the fecond objeet of law.
clxis.
Secr. I. Of the divifion of rights, and the feveral ways by which a right may be acquired.

Property.
The right of erioying and difpofing of a fubject at one's pleafure, is called property. Proprietors are refirained by law from ufing their property emuloully to their neighbour's prejufich. Every fiate or fovereign has a powes over private properiy', called, by fome law. yers, dominitum eminens, in virtue of which, the proprittor may he compelled to fell his property for an adequate price, whete an evident utility on the part of the public demands it.
2. Certain things are by nature itfelf incapable of appropriation; as the air, the light, the ocean, \&c. : none of which can be brought under the puwer of any one perfon, thuagh their nfe be common to all. Others are by law exenpted from private commerce, in ref,cét of the ufes to which th. $y$ are deltined. Of this hat kind are, ( 1. ) Res puliucu, as navigable tivcrs, highways, bridges, \&c.: the right of which is velled in the king, chiefly for the benefit of his prople, and they are called regalia. (2.) Res unizerfitatis, thin $z_{2}: 3$ which belong in property to a particular corporation or focicty, and whofe ufe is common to cuery individual in it, but both property and ufe are fubject to the regulations of the fociety; as town-houfes, corporationhalls, market-places, church-yards, \&e. 'The lands or other revenue belonging to a corperation do not fall under this cla 5 , but are juris priveati, guoad the corporation.
3. Property may be acquired, either by occuppution or acciffion; and transferred by tration or preficription: but prefcription being alfo a way of lofing property, falls to be explained under a feparate title. OcCUPATION, or occupancy, is the appropriating of tbings which have no owner, by apprehending them, or feizing their poffeffion. This was the original method of acquiring property: and continued, under certain ieftrictions, the doctrine of the Ruman law, Quod nullius ofl, fit cccufanis : but it can have no room in the feudal plan, by which the king is looked on as the original proprittor of all the lands within his dominions.
4. Even in that fort of moveable goods which are prefumed to have once had an owner, this rule obtains by the law of Scotland, $\mathscr{I}_{\text {guod }}$ nullius eft, fit domini regis. Thus, the right of treafure hid under ground is not acquired by eccupation, but accrues to the king. Thus alfo, where one finds Atrayed catle or other moveablef, which have been loft hy the former owner, the finder acquires no right in them, but mult give public notice thereof; and if, within year and day after fuch rotice, the proprietor does not claim his goods, they fall to the kiag, fheriff, or other perion to whom ahe king has made a grant of fuch efelieats.
5. In that fort of moveables which never had an owner, as wild-beafts, fowls, fifhes, jor pearls found on the fhore, the original law takes place, that he who firlt apprehends, becomes propritior; in fo much, that though the right of luanting, fowling, and fifhing, be reftrained by flatute, under certain penaities, yet all game, even what is catched in contravention of the law, becomes the property of the catcher (unlefs where the confifcation thereof is made part of the penalty), the contravener being obnoxious, however, to the penal enactment of the flatutes in coafequence of his tranfgreffion. It was not for a long time a fixed point whether a perfon, though poffeffed of the valued rent by law intithing him to kill game, could hunt upon another perfon's grounds without confent: but it was lately found by the court of feffion, and affirmed upon appeal, that he could not; it bcing repugnast to the idea of property, that any perfon, however qualified, Thould have it in his power to traverfe and hunt upon another's grounds without confent of the proprietor. Although certain things become the property of the firll occupant, yet there are otbers which fall not under this sule. Thus, whales thrown in or kille 1 on our cosils, beleng neither to thofe who kill them, nor to the proprietor of the grounds on which they are calt; but to the king, providing they are fo large as that they cannot be drawn hy a wane with fix uxen.
6. Accession is that way of acquiring property, by Acceltio which, in two things wheh have a connection with or dependence on one another, the property of the principal thing draws after it the property of its acceffory. Thus the owner of a cow becomes the owner of the calf; a houfe belongs to the owner of the ground on which it flands, though built with materials belonging to and at the charge of another; trees taking root in our ground, though planted by another, become ours. Thus alfo, the infenfible addition made to wne's ground by what a river waftes from other grounds (which is called allwvio), accrues to the mafter of the ground which receives the addition: but where it happened that a large piece of ground was disjoined and annexcd to another perfon's by the force of a river or any other accident. and which was by the Romans called avulfio, they confidered the owner's right of property till to fublitt, §21. Inj/. de rer. divis; and it is probable that, in a fimilar cafe, our courts would counrenance the diftinction. The Romans excepted from this rule the cafe of paintings drawn on another man's boaril or canvas, in connideration of the excellency of the art ; which exception our practice has for a like reafon extended to fimilar cafes.
7. Under acceffion is comprehended Spectaication; Specifes by which is meant, a perfon's making a new fpeciss or tiono fubject, from materials belonging to another. Where the new fpecies can be again reduced to the matter of which it was made, law confiders the former mafs as ftill exilting ; and therefore, the new fpecies, as an accefory to the former fubject, belongs to the proprictor of that fubject : but where the thing made cannot be fo reduced, as in the cafe of wine, which cannot be again turned into grapes, there is no place for the fibio juris; and therefore the workmanhip draws after it the property of the materiais. But the perfon who thas carries the property from the other is bound to inderanify
w of indemnify him according to the trne value; and in cafe it was done mala fole, he may be made liable in the pretium afferisuis or utmott value.
8. Though the new fpecies fhould be produced from the Commixtiov or confution of different fubllances belonging to different proprietors, the fame rule holds; but where the mixture is made by the common confent of the owner, fuch confent makes the whole a commor property, according to the thares that each proprietor had formerly in the fiveral fubje?ts. Wherc things of the fame fort are mixed without the confent of the proprictors, which cannot again be feparated, e. $g$. two hegheads of wine, the whole likewife becomes a common property; but, in the after-divifion, regard ought to be had to the diff:rent quality of the wines: if the things fo mixed admit of a feparation, e. $\begin{gathered}\text {. two flocks of fheep, the property continues di- }\end{gathered}$ ftinct.
9. Property is carried from one to another by Tandition; which is the delivery of peff.fion by the proprietor, with an intention to transfer the property to the receiver. Two things are therefore requifite, in order to the tranfmitting of property in this way: 2. The intention or conlent of the former owaer to transfer it on fome proper title of alienation, as fate, exchange, gift, \&.c. (2.) The actual delivery in purfuance of that intention. The firf is called the cauf $f$, the other the modus transferendi dominiii : which latt is fo neceflary to the acquiring of property, that he who gets the laft riglit, with the firf tradition, is preferred, according to the rule, Traditionibus, non rudis paitis, transferuntur revum dominia.
10. Tradition is either real, where the ipfa corpora of moveables are put into the hands of the receiver; or fymbolical, which is ufed where the thing is incapable of real delivery, or even when actual delivery is only inconvenient. Where the poffefion or cuiltody of the fubject has been before with him to whom the property is to be transferred, there is no room for tradition.
II. Poffeflion, which is effential both to the acquifition and enjoymert of property, is defined, the detention of a thing, with a defign or animus in the detainer of holding it as his own. It cannut be acquired by the fole act of the mind, without real detention; hut, being once acquired, it may be continued folo animo. Poffeflion is either natural, or civil, Natural poffeflion is, when one foffefles by himfelf: thus, we poffefe lands by cultivating them and reaping their Iruits, houfes by inhabiting them, moveabics by detaining them in our hands. Civil poffeffion is our holding the thing, either by the fole att of the mind, or by the hands of amother who holds it in our name : thus, the owner of a thing lent perficfes it by the borrower; the proprietor of lancs, by his tackfman, truftee, or fteward, \&ec. The fame fubject cannot be poffitid entirely, or in folitum, by two different perfons ai one and the fame time: and therefore poffeflion by an act of the mind ceales, as foon as the natural poffeffion is fo taken up by ancther, that the former poffeflor is not fuffered to re-enter. Yet two perfons may, in the judgment of law, poffefs the fame fubject, at the fame time, on diffeent rights : thus, in the cafe of a pledge, the creditor poffeffes it in his own name, in virtue of the right of impignoration; while the proptictor is confidered as poffefing, in and
through the creditor, in fo for as is necifiary for fup. porting his right of froperty. The fameductrine holds in liferenters, tackimen, dud, generally, in every cafe where there are rights affecting a fuhject diftinct from the property.
12. A lona flut poffeflor she wha, though he is not bonafite really proprietor of the fulject, yet believis himfelf proprieter on probable gronnds. it malif fite poffefor is he who knows, or is prefuned to know, that what he pofferfes is the propesty of another. A pulfofor lona fide acquired right, by the Roman law, to the fruits of the fubject poffeffed, that had been reaped and confumed by himfelf, while he buiieved the fubjects liis own. By cur cu?toms, perception alone, without confumpaion, lecures the poffin for: nay, if he has foxin the ground, winile his banafides continued, he is intitled to reap the crop, fropter curam et culturcm. But this doctrine does not reach to civil fruits, e $g$. the intereft of money, which the bona fide receiver muld reftore, together with the principal, to the owner.
13. Biona fikes neceflarily ceafeth by the confientic. rei aliens in the poffefir, whether fuch confcioulne?s thould proceed from legal inierpellation or private knowledze. Mala fides is fometimes induced by the true owner's bringisig his action againt the pofffor, fometimes not till litifconteflation, and, in cafes uncommonly favourable, not till fentence be pronounced a. gaintt the poffefor.
14. The property of moveable fuhje $\varepsilon$ is is prefumed Effects of by the bare act of poficfina, until the contrary be polfelion. proved; but poffefion of an immoveable fubject, tho' for a century of years together, if there is no feifin, does not create tven a prefumptive righe to it: Nullax Sofin?, nalla terra. Such futject is conidered as caduciary, and fo accrues to the fovereign. Where the property of a fubject is contefted, the lawful prifeffor is intitled to contirtue his poffeflou, till the point of right be difcuffed; and, if he has lon it by force or fitalth, the judge will, upon fummary application, immediately reftore it to him.
15. Where a poffeffor has feveral rights in his perfon, affecting the fubject poffeffed, the general rule is, that he may afcribe his poffefition to which of them he pleafes; but one cannot afcribe his poffedion to a title other thin that on which it commenced, in prejudice of him from whom his title flowed.

## Sect. II. Of beritable and moveable rights.

For the better underfianding the doctrine of this title, it mult be known, that by the law of Scotland, and indeed of moft nations of Europe fince the introduction of feus, wherever there are two or more in the fame degree of confanguinity to one who die。 in. teftate, and who are not all females, fuch rights belonging to the deceafed as are either properly feudal, or liave any refemblance to feudal rights, defcend wholly to one of them, who is confidered as his proper heir; the others, who have the name of next of kin or executors, muft be contented with that portion of the eflate which is of a more perifhable nature. Hence has arifen the divifion of rights to be explained under this title:the fubjects defcending to the heir, are flyled beritable; and thofe that fall to the next of kin moveable.
2. All rights of, or affecting lands, under which are çp.

Law of
comprehended houfes, mille, filhings, teinds; and all rights of fubjects that are fundo annexa, whether completed by feifin or not, are heritable ex fua natura. On the other hand, every thing that moves itfelf or can be moved, and in general whatever is not united to land, is moveable: as houfehold-furniture, corns, cattle, cafh, arrears of rent and of intereft, even though they fhould be due on a right of annualrent: for though the arrears laf mentioned are fecured on land, yet being prefently payable, they are confidered as caft.
3. Debts. (nomina debitorum), when due by bill, promiffory note, or account, are moveable. When confituced by bond; they do not all fall under any one liead; but are divided into heritable and moveable, by the following rules. All debts conflituted by bond bearing an obligation to infeft the creditor in any heritable fubject in fecurity of the principal fum and annualrent, or aunualrent only, are heritable; for they not only carry a yearly profit, but are fecured upon land.
4. Bonds merely perfnnal, though bearing a clanfe of intereft, are, by act 1661 , declared to be moveable as to fucceffion ; i.e. they go, not to the heir, but to the next of kin or executors: but they are lieritable with refpect to the fink, and to the rights of humand and wife ; that is, though, by the general rule, move. able rights fall under the communion of goods confe quent upon marriage, and the moveables of denounced perfons fall to the crown or fifik by fingle efcheat, yet fuch bonds do neither, but are heritable in both reipects.
5. Bonds taken payable to heirs and affignees, fecluding executors, are heritahle in all refpects, from the deftination of the creditor. But a bond, which is made payahle to heirs, without mention of executors, defcends, not to the proper heir in heritage, though heirs are mentioned in the bond, but to the executor; for the word beir, which is a generic term, points out him who is to fucceed by law in the right ; and the execntor, being the heir in mobilibus, is confidered as the perfon to whom fuch bond is taken payable. But where a bond is taken to heirs-male, or to a feries of heirs, one after another, fuch bond is heritable, becaufe its deflination neceffarily excludes executors.
THow move. able rights become hecitable.
(1.) Subjects originally moveable become heritable, any other moveable fubject, may be provided to to heir, from the right competent to every proprietor to fette his property on whom he pleafes. (2.) Moveable rights nay become heritable, by the fupervening of an lieritable fecurity: Thus, a fum due by a perfonal bond becomes heritable, by the creditur's accepting an heritable right for fecuring it, or by adjudging up. on it.
7. Heritable rights do not become moveable by acceflory moveable fecurities; the heritable right being in fuch cafe the jus nobilius, which draws the other after it.

## Rights

partl heri- the nature both of heritable and moveable. rects, of sable, part-. bonds are, by the above cited act 166 r , moveable in ly moveable.
followed, may be affected at the fuit of crefitors, either by adjudication, which is a diligence proper to heritage; or by arreftment, which is peculiar to moveables. Bonds fecluding executors, though they defcend to the creditor's heir, are payable by the debtor's executors, without relief againt the heir ; lince the debtor's fucceffion cannot be affected by the deitination of the creditor.
9. All queftions, whether a right be heritable or What p moveable, mult be determined according to the condi- od mak tion of the fubject at the time of the anceltor's death. fubjeal If it was heritable at that period, it muft helong to the nioreab heir; if moveable, it mult fall to the executor, without regard to any alterations that may have affected the fubject in the intermediate period between the anceftor's death and the competition.

## I. HERITABLE RIGHTS.

## SECT. III. Of the comfitution of beritable rights by cbarter and fiifin.

Heritable rights are governed by the feudal law, origin which owed its origin, or at leaft its firft improvements, the feur to the Longobards; whofe kings, upon having penetrated into Italy, the better to preferve their conquefts, made grants to their principal commanders of great part of the conquered provinces, to be again fubdivided by them among the lower officers, under the conditions of fidelity and military fervice.
2. The feudal conflitutions and ufages were firft reduced into writing about the year 1150, by two lawyers of Milan, under the title of Confuetudines Feudorum. None of the German emperors appear to have exprefsly confirmed this collection by their authority; but it is generally agreed, that it had their tact approbation, and was confidered as the cuftomary feudal law of all the countries fubject to the empire. No other country has ever acknowledged thefe books for their law; but each ftate has formed to itfclf fuch a fyitem of feudal rules, as beft agreed with the genius of its own conflitution. In feudal queftions, therefore, we are governed, in the firlt place, by our own ftatutes and cuftoms; where thefe fail us, we have regard to the practice of neighbouring countries, if the genus of their law appears to be the fame with ours; and fhould the queftion fill remain doubtful, we may have recousfe to thofe written books of the feus, as to the original plan on which all feudal fyltems have proceeded.
3. This military grant gnt the name, firf of benef- Definit cium, and after wards of feudum; and was detined a gra- of feus tuitous right to the property of lands, made under the conditions of fealty and military fervice, to be performed to the granter by the receiver; the radical right of the lands till remaining in the granter. Under lands, in this definition, are comprehended all rights or fubjects fo connected with land, that they are deemed a patt thereof; as houfes, mills, fifhings, jurifdiction, patronages, \&c. Though feus in their original nature were gratuitous, they foon became the fubject of commerce; fervices of a civil or religious kind were frequently fubtituted in place of military; and now, of a long time, fervices of every kind have been entirely dif-
penfed
w of penfed with in certain feudal tenures. He who makes tand the grant is callerl the fuperior, and he who receives it the valdul. The fubject of the grant is commonly called the ferm ; though that word is at other times, in our law, ufed to fignify one particular tenure. (See Sect. iv. 2.). The intereft retained by the fuperior in the feu is fyled dominium direlum, or the fuperiority; and the interelt acquired by the vaffal, dominium utile, or the property. The word fee is promifcuoully applied to both.
4. Allodial goods are oppofed to feus; by which are undertood goods enjoyed by the owner, independent of a fuperior. All moveable goods are allodial ; lands only are fo when they are given without the condition of fealty or homage. By the fcudal fyttem, the fovereign, who is the fountain of feudal rights, referves to himfelf the fuperionity of all the lands of which he nakes the grant ; fo that, with us, no lands are allodial, except thofe of the king's own property, the fuperiorities which the king referves in the proper-ty-lands of his fubjects, and manfes and glebes, the right of which is completed by the preßfytery's defig. nation, without any feudal grant.
5. Every perfon who is in the right of an immove:feudal able fubject, provided he has the free adminiftration of his eftate, and is not debarred by flatute, or by the nature of his right, may difpofe of it to another. Nay, a vaffal, though he har only the dominium utile, can fubfen his property to a fubvaffal by a fubaltern right, and thereby raife a new doninium direfum in himfelf, fubordinate to that which is in his tupctior; and fo in infunitum. The vaffal who thus fubfeus is called the fubvaffal's immedia:e fuperior, and the vaffal's fuperior is the fubvalfal's mediate fuperior.
6. All pcrfons who are not difabled by law, may acquire and enjoy feudal rights. Papits cannot purchafe a land ettate by any voluntary deed. Aliens, who owe allegiance to a foreign prince, cannot hold a feudal right without naturalization: and therefore, where fuch privilege was intended to be given to fa voured nations or perfons, flatutes of naturalization were neceflary, either general or fpecial ; or at leaft, letters of naturalization by the forereign.
7. Every heritable fubject, capable of commerce, may be granted in feu. From this general rule are ex cepted, 1. The annexed property of the crown, which is not alienable withont a previous diffolution in par liament. 2. Tailzied lands, which are devifed under condition that they fhall not be aliened. 3. An eftate in bareditate jacente cannot be effectually aliened by the heir-apparent (i.e. not entered) ; but fuch alienation becomes effectual upon his entry, the fupervening right accruing in that cafe to the purchafer; which is a rule applicable to the alienation of all fubjects not belonging to the vender at the time of the fale
8. The feudal right, or, as it is called, inveffiture, is conftituted by charter and feifin. By the charter, we unferfand that writing which contains the grant of the feudal fubject to the vaffal, whether it be cxecuted in the proper form of a charter, or of a difpofition. Charters by fubject fuperiors are granted, either, 1. A me de fuperiore meo, when they are to be holden, not of the granter himfelf, but of his fuperior. This fort is called a public bolding, becaufe vaffals were Vol. IX. Part II.
in ancient times publicly received in the fuperior's court before the pares curix or ce-vaflals. Or, 2. De

Law of Scotland. $m e$, where the lands are to be holden of the granter. Thefe were called fometimes bafo rights, from bas, lower: and fometimes private, becaufe, before the eftablithment of our records, they were eafily concealed from third parties; the nature of all which will be more fully explained, Sect. vii. An origınal charter is that by which the fee is firt granted: A charter by progrefs is a renewed difpofition of that fee to the heir or affignee of the vaflal. All doubtful claufes in charters by progrefs ought to be conflrued agreeably to the original grant; and all claufes in the origmal charter are undertood to ve implied in the charters by progrefs, if there be no exprefs alteratior.

Its confti-
9. The firlt claufe in an original charter, which tuent parts. follows immediately after the name and defignation of the granter, is the narrative or recital, which expreffes the ccaufes inductive of the grant. If the grant be made for a valuable confideration, it is faid to be onerous; if for love and favour, gratuitous. In the difpefitive claufe of a charter, the fubjects made over are defcribed either by fpecial boundaries or march-flones, (which is called a bounding charter), or by fuch other characters as may fufficiently diftinguifh them. A charter regularly carries right to no fubjects but what are contained in this claufe, though they fhould be mentioned in fome other claufe of the charter. It has been however found, that a right to falmon-fifhing was carried by a claufe cump pifcariis in the tenendas of a charter, the fame having been followed with poffeflion.
10. The claufe of tenendas (from its firt words tenendas pradiatas terras) expreffes the particular tenure by which the lands are to be holden. The claufe of reddendo (from the words reddendo inde annuatim) fpecifies the particular duty or fervice which the vaffal is to pay or perform to the fuperior.
11. The claufe of zuarrandice is that by which the Warran: granter obliges bimfelf that the right conveyed thall dice. be effectual to the receiver. Warrandice is either perfonal or real. Perfonal warrandice, where the granter is only bound perfonally, is either, 1. Simple, that he fhall grant no deed in projudice of the right ; and this fort, which is confined to future deeds, is implied even in donations. 2. Warran Jice from faat and deed, by which the granter warrants that the right neither has been, nor hhall be, hurt by any fact of his. Or, 3. Abfolute warrandice contra omnes mortales, whereby the right is warranted againtt all legal defetts in it which may carry it off from the receiver either wholly or in part. Where a fale of lands proceeds upon an onerous caufe, the granter is liable in abfolute warrandice, though no warrandice be expreffed; but in affignations to debrs or decrees, no higher warrandice than from fact and deed is implied.
12. Gratuitous gaants by the crown imply no warrandice ; and though warrandice thould be expreffed, the claufe is ineffectual, from a prefumption that it has crept in by the negligence of the crown's officers. But where the crown makes a grant, not jure corond, but for an adequate price, the fovereign is in the fame cafe with his fubjects.
13. Abfolute warrandice, in cafe of eviction, affords Effets of 4 P

Law of an action to the grantee againt the granter, for ma-

## Real war-

 randice. king up to him all that he fhall have fuffered through the defect of the right; and not fimply for his indemnification, by the granter's repayment of the price to him. But as warrandice is penal, and conlequently friai juris, it is not eafly prefumed, nor is it incurred from every light fervitude that may affect the fubjeet ; far lefs dnes it extend to burdens which may affect the fubject pofterior to the grant, nor to thofe impofed by public flatute, whether before or after, unlefs feceially warranted againf.14. Real warrandice is either, 1. Exprefs, whereby, in fecurity of the lands principally conveyed, other lands, called warrandice lands, are alfo made over, to which the receiver may have recourfe in cafe the principal lands be evicted. Or, 2. Tacit, which is con-Excam- ftituted by the exchange or excambion of one piece of
bion.

Precept of reifu.

Symbols ufed in feifins.

Eegifration of feifins. ground with another; for, if the lands exchanged are carried off from either of the parties, the law itfelf, without any paction, gives that party inmediate recourfe upon his own firit lands, given in exchange for the lands evicted. which is the command of the fuperior granter of the right to his bailie, for giving feifin or polfeffion to the vaffal, or his atturney, by delivering to him the proper fymbols. Any perfon, whofe name may be inferted in the blank left in the precept for that purpofe, can execute the precept as bailie; and whoever has the precept of feifin in his hands, is prefumed to have a power of attorney from the valfal for receiving poffeflion in his name.
16. A ferfin is the inftrument or atteflation of a notary, that poffefion was actually given by the fuperior or his bailie, to the valfal or his attorney; which is confidered as fo necefliary a fulemnity, as not to be fuppliable, tither by a proof of natural poftefforn, or even of the fpecial fact that the vaffal was duly entered to the polfffion by the fuperior's bailie.
17. The fymbols by which the delivery of pofferfion is expreffed, are, for lands, earth, and fone; for rights of aunualrent payable forth of land, it is alfo earth and fone with the addition of a penny moncy; for parfonage teinds, a fheaf of corn; for jurifdicti..ns, the book of the court; for patronagef, a pfalm-book, and the keys of the church; for filhings, net and coble; for mills, clap and happer, \&ce. The feifin mult be taken upon the ground of the lands, except where there is a fpecial difpenfation in the charter from the crown.
18. All feifins muft be regittered within 60 day3 after their date, either in the general regifter of feifins at Edinburgh, or in the regifter of the particular fhire appointed by the act 1617; which, it muft be oblerved, is not, in every cale, the fhire within which the lands lie. Burgage feifins are ordained to be regittered in the books of the borough.
19. Unregiftered feifins are ine fleetual againft third parties, but they are valid againft the granters and their heirs. Seifins regularly recorded, are preferable, not according to their own dates, but the dates of Qocefeifin their regittration.
serves in contifucus ind in uni
ted tene. มแก!
lands of Scotland, is confituted jure corone without feifin. In feveral parcels of land that lie contiguous to one another, one feifin ferves for all, unlef3 the right of the feveral parcels be cither holden of different fuperiors, or derived from different authors, or enjoyed by different tenures under the fame fuperior. In difcontiguous lands, a feparate feilin muft be taken on every parcel, unlefs the foverengn has united them into one tenandry by a charter of union; in which cafe, if there is no fpecial place expreffed, a feifin taken on any part of the united lands will ferve for the whole, even though they be fituated in different fhires. The only effect of union is, to give the difcontiguous lands the fame quality as if they had been contiguous or naturally united ; union, therefore, does not take off the ueceffity of feparate feifins, in lands holden by different tenures, or the riglits of which now fiom different fuperiors, thefe being incapable of natural union.
21. The privilege of barony carries a higher right Barony is than union does, and confequently includes union in it plics unio as the leffer degree. This right of barony can neither be given, nor tranfmitted, unlefs by the crown; but the quality of limple union, being once conferred on lands hy the fovereign, may be communicated by the vaffal to a fubvaffal. Though part of the lands united or erected into a barony be fold by the vaffil to be holden a me, the whole union is not thereby diffolved: what remains unfold retains the quality.
22. A charter, not perfected by fcifin, is a right $\mathbf{A}$ charies merely perfonal, which does not transfer the property becomes (fee $\mathrm{N}^{\circ}$ clxxiii. I .) ; and a feifin of it felf bears no reai only faith without its warrant: It is the eharter and feifin after feif joined together that conftitutes the feudal right, and fecures the receiver againt the effeet of all pofterior feifins, even thongh the charters on which they proceed flould be prior to his.
23. No quality which is defigned as a lien or real All barde burden on a feudal right, can be effic ctual againtt fin- nutut be gular fucceffors, if it be not inferted in the inveltiture. ferted ine If the creditors in the burden are not particularly meri-ture. tioned, the burden is not real; for no perpetual unknown incumbrance can be created upon lands. Where the right itfelf is granted with the burden of the fum therein mentioned, or where it is declared soid if the fum be not paid againft a day certain, the burden is real ; but where the receiver is fimply obliged by his acceptance to make payment, the claufe is effectual only againt him and his heirs.

## Sect. IV. Of the feveral kinds of holding.

Feudal fubjects are chiefly diftinguifhed by their cifferent manners of holding, which were either ward, llanch, feu, or lurgaze. Wrard-kolding, (which is Ward-ho now abolifhed by 20 (Geo. II. c. 50.) was that which ing. was granted for military fervice. Its proper redderulo was, fervices, or fervicts ufed and zvont; by which laft was meant the performance of fervice whenever the fuperior's occafions required it. As all feudal rights were originally held by this tenure, ward-holding was in dulio prefumed. Hence, though the reddendo had contained forme fpecial fervice or yearly duty, the holding was prefumed ward, if another holding was not particularly expreffed.
2. Fow holding is that whereby the vaffal is obliged Feu-liol.
to pay to the fuperior a yearly rent in money or grain, and fometimes alfo in Cervices proper to a farm, as ploughine, reaping, carriages for the fuperior's ufe, Esc. nomine feudi firme. 'This kind of tenure was intraduced for the encouragement of agriculture, the improvement of which was confiderably obfructed by the vaffal's obligation to military fervice. It appears to have been a tenure known in Scotland as far back as leges burgorum.
3. Blanch-holding is that whereby the vaffal is to pay to the fuperior an elufory yearly duty, as a penny money, a rofe, a pair of gilt fpurs, \&c. merely in acknowledgment of the fuperiority, nomine albe firme. This duty, where it is a thing of yearly growth, if it be not demanded within the year, cannot be ewacted thereafter; and where the words $j i$ petatur tantum are fubjoined to the reddendo, they imply a releafe to the vaffal, whatever the quahty of the duty may be, if it is not afked within the year.
4. Burgage-holding is that, by which boroughs. royal hold of the fovereign the lands which are contained in their charters of erection. This, in the opinion of Craig, does not conftitute a Ceparate tenure, but is a fperies of ward holding; with this fpecialty, that the vaffal is not a private perfon, but a community: and indecd, watching and warding, which is the ufual fervice contained in the reddendo of fuch charters, might be properly enough faid, fome centuries age, to have been of the military kind. As the royal borough is the king's vaffal, all burgage holders hold immediately of the crown : the magiltrates, therefore, when they receive the refignations of the particular burgeffes, and give feifin tis them, act, not as fuperiors, but as the king's bailies fpecially authorifed thereto.
5. Feudal fubjects, granted to churches, monafteries, or other focieties for religions or charitable ufes, are faid to be mortified, or granted ad manum mortuam; either becaufe all cafualtics muit neceflarily be loft to the fuperior, where the vaffal is a corporation, which never dies; or becaufe the property of there fubjects is granted to a dead hand, which cannot tranffer it to another. In lands mortified in times of Popery to the church, whether granted to prelates for the behoof of the church, or in puram eleemofynam; the only lervices preftable by the vaffals were prayers, and finging of maffes for the fouls of the deceafed, which approaches nearer to blanch-holding than ward. The purpofes of fuch grants having been, upon the reformation, declared fuperfitious, the lands mortified were annexed to the crown: but mortifications to univerfities, hofpitals, \&c. were not aflected by that annexation; and lands may, at this day, be mortified to any lawful purpofe, either by blanch or by feu holdiag. But as the fuperior mutt lofe all the cafualties of fuperiority in the cafe of mortifications to churches, univerfities, \&cc. which being confidered as a corporation, never dies; therefore lands cannot be mortified without the fuperior's confent. Cruig, lib. I. dieg. 11 . § 21.

Sect. V. Of the cafualties due to the fuperior.
The right of the fuperior continues unimpaired, notwithtanding the feudal grant, unlefs in fo far as
the dominiam utile, or property, is conveyed to his vaffal. The fuperiority carries a right to the fervices and annual duties contained in the reddento of the vaf. fal's charter. The duty payable by the vaffal is a debitum fundi, i. e. it is recoverable, not only by a perfonal action againl himfelf, but by a real action a. gaint the lands.
2. Befides the conftant fixed rights of fuperiority, Cafual there are others, which, becauf they depend upon un- right:certain events, are called cafualties.
3. The cafualties proper to a ward-holding, while ward-holdthat teaure fubfitled, were ward, recognition, and ing. marriage, which it is now unneceflary to explain, as by the late llatutes 20 and 25 Geo . 1 I . for abolifhing ward-holdings, the tenure of the lands holden ward of the crown or prince is turned into blanch, for payment of one penny Scots yearly, $\sqrt{s}$ petatur tantum; and the tenurive thofe holden of fobjects into feu, for pay-
ment of fuch yearly feu duty in money, victual, or tenuri ${ }^{\text {ph }}$ thofe holden of fobjects into feu, for pay-
ment of fuch yearly feu duty in money, victual, or cattle, in place of all fervices, as fhould be fixed by the court of feffion. And accordingly that court, by act of federunt Feb. 8. 1749, laid down rules for afcertaining the extent of thefe feu-duties. A full hiftory of their cafualties, and of the effects confequent upon their falling to the fuperior, will be found in Erfkine's large lnflituie, B. 2. T. 5. §5. et Sequen; to which the reader is referred.
4. The only cafualty, or rather forfeiture, proper Feu-holde to feu-holding, is the lofs or tinfel of the feur-right, Feu -
by the neglect of payment of the feu-duty for two full by the neglect of payment of the feu duty for two full years. Yet where there is no conventional irritancy in the frur right, the vaffal is allowed to purge the legal irritancy at the bar ; that is, he may prevent the forfeiture, by making payment before fentence: but where the legal irritancy is fortified by a conventional, he is not allowed to purge, unlef, where he can give a good reafon for the delay of payment.
5. The cafualties common to all holdings are, Nos-entry. non-entry, relief, liferent-efcheat, difdamalion, and purpreflure. Nun-entry is that cafualty which arifes to the fuperior out of the rents of the feudal fubject, through the heir's neglecting to renew the inveltiture after his ance!tor's death. The fuperior is intitcti to this cafualty, not only where the heir has not obtained himfelf infeft, but where his retour or infeftment is fet afide upon nullities. The heir, from the death of the anceftor, till he be cited by the fuperior in a procefs of general declarator of non-entry, lofes only the retoured duties of his lands, (fee next parag.) ; and he forfeited thefe, though his delay fhould net argue any contempt of the fuperior, becaufe the cafualty is confidered to fall, as a condition implied in the feudal right, and not as a penalty of tranigreffion : but reafonable excufes are now admitted to liberate even from the retoured dutics before citation.
6. For underlianding the nacure of retoured duties, it mult be known, that there was anciently a genera! valuation of all the lands in Scotland, deligned both for regulating the proportion of public fubfidies, and for afcertaining the quantity of non-entry and relief. duties payable to the fuperior; which appears, by a contract between K. R. Bruce and his fubjects anno 1327, preferved in the library of the Faculty of Advocates, to have been fettled at lealt as far back as the reign of Alexander III. This valuation became in the

courle of time, by the improvement of agriculture, and perhaps alfo by the heightening of the nominal value of our money, from the reign of Robert I. downwards to that of James III. much too low a ftandard for the fupcrior's cafualties: wherefore, in all fervices of heirs, the inqueft came at laft to take proof likewife of the prefent value of the lands contained in the brief (quantum nunt valent), in order to fix thefe cafualties. The firt was called the old, and the other the nezv, extent. Though both extents were ordained to be fpecified in all retours made to the chancery upon brieves of inqueft; yet by the appellation of retoured duties in a queftion concerning cafualties, the new extent is always underftood. The old extent continued the rule for levying public fubfidies, till a tax was impofed by new proportions, by feveral acts made during the ufurpation. By two acts of Ciomwcll's parlament, held at Weftminiter in $\mathbf{6} 55$, impoling taxations on Surtland, the rates laid upon the feveral counties are precike.y fixed. The fublidy granted by the act of convention 1667 was levicd on the feveral counties, ncarly in the fame proportions that were fixed by the ufurper in 1656 ; and the fums to which each county was tubjected were fubdivided among the individual landholders in that county, according to the valuations already fetiled, or that fhould be fetted by the commiffioners appointed to carry that act into execution. The rent fixed by thefe valuations is commonly called the ralued rent; according to which the land tax, and mott of the other public burdens, have been levied tince that tiwc.
7. In feu-holdings, the feu-duty is retoured as the rent, becaufe the feu-duty is prefumed to be, and truly was at firl, the rent. The fuperior therefore of a feuholding gets no non-entry, before citation in the general declarator; for he would have been intitled to the yearly feu-duty, though the fee had bcen full, i. e. though there had been a;yaffal infeft in the lands. The fuperior of ecinds gets the fifth part of the reroured duty as non-entry, becaufe the law confiders teinds to be worth a fifth part of the rent. In rights of annualrent which are holden of the granter, the annualrenter becomes his debtor's vaffal ; and the annualrent contained in the right is retoured to the blanch or other duty contained in the right before declarator.
8. It is becaufe the retoured duty is the prefumed rent, that the non-entry is governed by it. If therefore no retour of the lands in non-entry can be produced, nor any evidence brought of the retoured duty, the fuperior is intitled to the real, or at leaft to the valued, rent, even before citation. In lands formerly holden ward of the King, the heir, in place of the retoured duties, is fubjected only to the annual payment of one per cent. of the valued rent.
9. The heir, after he is cited by the fuperior in the action of general declarator, is fubjected to the full rents till his entry, becaufe his neglect is lefs excufable after citation. The decree of declarator, proceeding on this action, intitles the fuperior to the poffeflion, and gives him right to the rents downward from the citation. As this fort of non-entry is properly penal, our law has always reftricted it to the retoured duties, if the heir had a prebable excufe for not entering.
10. Non-entry does not obtain in burgage-holdings, tafes non- becaufe the incorporation of inhabitants holds the sntry is not whole incorporated fubjects of the King; and there due.
can be no non-entry due in lands granted to communities, becaufe there the vaffal never dies. This covers the right of particulars from non-entry: for if non entry be excluded with regard to the whole, it cannot obtain with regard to any part. It is alfo excluded, as to a third of the lands, by the terce, during the widow's life ; and as to the whole of them, by the courtefy during the life of the hufbard. But it is not excluded by a precept of feifin granted to the heir till feifu be taken thereupon.
II. Relief is that cafualty which intitles the fupe. Relief, rior to an acknowledginent or conlideration from the heir for receiving him as vaffal. It is called relicf, becaufe. by the entry of the heir, his fee is relieved out of the hands of the fuperior. It is not due in feu-holdings flowing from fubjects, unlefs where it is expreffed in the charter by a fpecial clanfe for doubling the feuduty at the entry of an heir ; but, in feu-rights holden of the crown, it is due, though there flould be no fuch claufe in the clarter. The fuperior can recover this cafualty, either by a poinding of the ground, as a debitum fundi, or by a perfonal action agaiult the heir. In blanch and fee: holdings, where this cafualty is exprefsly hlipulated, a year's blanch or fen duty is due in name of relief, befide the current year's duty payable in oame of blanch or feu farm.
12. Escheat (fromefcbecoir, to buppen or fall) is that Efhea forfeiture which falls through a perfon's being denounced rebal. It is either fingle or liferent. Single of. cheat, though it does not accine to the fuperior, mult be explained in this place, becaule of its coincidence with liferent.
13. After a debt is canftituted, cither by a formal Letters decree, or by regittration of the ground of debt, which berniul to the fpecial effect of execution, is in law accounted a dectee ; the creditor may obtain letters of homing, iffuing from the fignet, commatiding meffengers to charge the debtor to pay or perform his obligation, within a day certain Where horning proceeds on a formal dectee of the feffin, the time indulged by law to the debtor is fifteen days; if upon a decree of the commiffion of teinds or admiral, it is ten; and upon the decrees of all inferior judges, fifteen days. Where it proceeds on a regiltered oblogation, which fpecifies the number of days, that number mult be the rule; and, if no precife number be mentioned, the charge malt be given in fifteen days, which is the term of law, unlefs where fpecial ftatute interpofes; as in bills, upon which the debtor may be charged on fis days.
14. The meffenger mult execute thefe letters (and indeed all fummonfes) againft the debtor, either perfonally or at his dwelling-houfe; and, if he get not accefs to the houfe, he muft frike fix knocks at the gate, and thereafter affix to it a copy of his execution. If payment be not made within the days mentioned in the horning, the meffenger, after proclaiming ihrse oyeffes at the market-crofs of the head borough of the dehtor's domicile, and reading the letters there, blows three blalts with a horn, by which the debtor is underftood to be proclaimed rebel to the king for contempt of his authority; after which, he mult affix a ecpy of the execution to the market crofs: This is called the publication of the diligence, or a denunciation Denun at the burn. Where the debtor is not in Scotland, he tun. muft be charged on fixty days, and denounced at the
market-
av of market-crofs of Edinburgh, and pier and fore of
15. Denunciation, if regiftered within 15 days, either in the fheriff's books, or in the general regifter, drew after it the rebel's fingle efcheat, i.e. the furfeiture of his moveables to the crown. Perfons denounced rebels have not a perfona flandi in judicio; they can neither fue nor defend in any action. But this ineapacity being unfaveurable, is perfonal to the tebel, and cannot be pleaded arainlt his affignee.
16. Perfons cited to the court of jufficiary may be alfo denounced rebels, either for appearing the re with ton great a number of attendants: or, if they fail to appear, they are declared fugitives from the law. Single efcheat falls, without denanciation, upon fentence of death pronounced in any criminal trial ; and, by feccial death pronounced in any criminal trial ; and, by fpecial
flatute, upon one's being convieted of certain crimes, though nut capital ; as perjury, bigamy, deforcement, breach of arretment, and ufury. By the late act abolifhing ward holdings, the cafualties both of fingle and liferent efcheat are difcharged, when proceeding upon denunciation for civil debts; but they fill continue, when they arife from criminal caufes. All moveables belonsing to the rebel at the time of his rebellion, (whelifer proceeding upon denunciation, or fentence in a criminal trial), and all that fhall be afterwards acquired by him until relaxation, fall under fingle efcheat. Bonds hearing inteeft, becaufe they continue heritable quaad fifoun, fall not under it, nur fuch fruits of heritable fubjects as became due after the term next enfuing the rebellion, thefe being referved for the liferent efcheat.
17. The king never retains the right of efcheat to himfelf, but makes it over to a donatory, whofe gift is not perfected, till,' upon an action of general declarator, it be declared that the rebel's efcheat has fallen to the crown by his denunciation, and that the right of it is now rranferred to the purfuer by the gift in his $f_{\text {a }}$. vour. Every creditor therefore of the rebel, whofe debe was contracted before rebellion, and who has ufed diligence before declarator, is preferable to the donatory. But the efcheat cannot be affected by any debt contracten, nor by any voluntary deed of the rebel after rebellion.
18. The rebel, if he either pays the debt charged for, or fufpends the diligence, may procure letters of relaxation from the horn, which, if publifhed in the fame place, and regitered 15 days thereafter in the fame regifter with the denunciation, have the effeet to reflore him to his former tlate; but they have no retrofpect as to the moveables already fallen under efcheat, without a fpecial clauff for that purpofe.
19. The rebel, if he continues unrelaxed for year and day after rebellion, is conftrued to be civilly dead: and therefore, where he holds any feudal right, his fuperiors, as being without a vaffal, are intitled, each of them, to the rents of fuch of the lands belonging to the rebel as huld of himfelf, during all the days of the rebel's natural life, by the cafualty of liferent escheat; excepe where the denunciation proceeds upon treafon or proper rebellion, in which cafe the liferent falls to the king.
20. It is that eflate only, to which the rebel has a proper right of liferent in his own perfor, that falls under his lifferent efcheat.

## uncia-

21. Though neither the fuperior nor his donatory can enter into poffeffion in conleqquence of this cafualty, till decree of declarator; yet that decret, being truly declaratory; has a retrolpect, and does not fo properly confer a new right, as declare the right formerly conflituted to the fuperior, by the civil death of his vaffal. Hence, all charters or heritable bonds, though granted prior to the rebellion, and all adjudications, though led upon debts contracted before that peiod, are ineffectual againft the liferent efchtat, unlefs feifn be taken thereon within year and day after the granter's rebellion.
22. Here, as in fingle efcheat, no debt contracted after rebellion can hurt the donatory, nor any voluntary right granted after that period, though in fecurity or latisfaction of prior debts.
23. Disclamation is that cafualty whereby a vaf- Difclama。 fal forfeits his whole feu to his fuperior, if he difuwnston. or difclaims him, wichont ground, as to any part of it. Purpresture draws likewife a forfeiture of the whole Purpres. feu after it ; and is incurred by the vaffal's encroaching ture. upon any part of his fuperior's property, or attempting by building, inclufing, or otherwife, to make it his own. In both thefe fendal delinquencies, the leat coluur of excufe faves the vaffal.
${ }^{2}+$ All grants frum the crown, whether chatters, Sigatures. gifts of cafualties, or others, proceed on fignatures gifts of cafualties, or others, proceed on fignatures
which pafs the fignet. When the king relided in Scot land, all lignatures were fuperferibed by him; but, on the accetfion of James VI. to the crown of England, the accethon of James $V$. to the crown of England,
a cachet or feal was made, having the king's name engraved on it, in purfuance of an act of the privy-council, April 4. 1603 . with which all fognatures were to

be afterwards faled, that the lords of exchequer wese inpowered to pafs; and thefe powers are transferred to the court of excliequer, which was eftablifhed in
Scotland after the union of the two kingdoms in 1707 . to the court of excluequer, which was eftablifhed in
Scotland after the union of the two kingdoms in 7707. Grants of higher confequence, as remiffons of crimes,
gifts proceeding upon forfeiture, and charters of novoGrants of higher confequence, as remiffions of crimes,
gifts proceeding upon forfeiture, and charters of novodamus, mult have the king's fign manual for their warrant.
24. If lands holding of the crown were to be con-Seals, veyed, the charter pafled, before the union of the kingdoms in 1707, by the great feal of Scotland; and now by a feal fubflitute in place thereof. Grants of now by a feal Lublitute in place thereof. Grants of great feal ; and the commiffions to all the principal oflicers of the crown, as Juftice-Clerk, King's Adrocate,
Solicitor, \&c. do fo at this day. All rights which fub. licers of the crown, as Jultice-Clerk, King's Advocate,
Solicitor, \&ic. do fo at this day. All rights which fub. jects may tranfmit by fumple affignation, the king tranf-
mits by the privy- feal : as gifts of moveables, or of jects may tranfmit by fimple affignation, the king tranf-
mits by the privy.feal : as gifis of moveables, or of cafnalties that require no feifin. The quarter feal, otherwife called the tefimonial of the sreat Seal, is appended to gifts of tutory, commififions of brieves ifluing from the chancery, and letters of prefentation to lands from the chancery, and letters of prefentation to lands-
holding of a fubject, proceeding upon forfeiture, baflardy, or ultimus beres.
25. Seals are to royal grants what fubfcription is Their wes to rights derived from fubjects, and give them authority; they ferve alfo as a check to gifts procured (fub. reptione vel obreptions) by concealing the truth, or expreffing a falfehood; for, where this appears, the gift
inay be fopped before paffiog the feals, though the figinay be ftopped before paffigg the feals, though the fignature fhould have been figned by the king. All rights paling under the great or privy feal muft be regillertd rant.

Luv of in the regifters of the great or privy feal refpectives, beScotla.d. fore appending the feal.
cixvii Sect. VI. Of the right which the valch acquires by getting the feu.

Dominium atile.

UvDER the dominium utile which tl:e vaffal acquires by the feudal right, is comprehended the property of whatever is confidered as part of the lands, whether of houles, woods, inclofures, \&c. above ground; or of coal, limettone, minerals. \&c under ground. Mills have, by the generality of our lawyers, been deemed a feparate tenement, and fo not carried by a charter or difpofition, without either a fpecial claufe convey. ing mills, or the erection of the lands into a barony. Yet it is certain, that, if a proprietor builds a mill on his own lands, it will be carried by his entail, or by a retour, without mentioning it, alchough the lands are not erected into a barony. If the lands difponed be altricted, or thiled to another mill, the purchafer is not allowed to build a new corn-mill on his property, even though he flould offer fecurity that it fhall not hurt the thirle; which is introduced for preventing daily temptations to fraud.
2. Proprictors are prohibited to hold dove-cotes, unlefs their yearly rent, lying within two miles thereof, extend to ten chalders of victual. A purchafer of lands, with a dove-cote, is not obliged to pull it down, though he flould not be qualified to build one; but, if it becomes ruinous, he cannot rebuild it. The right of brewing, though not expreffed in the grant, is implied in the nature of property; as are alfo the rights of filhing, fowling, and hunting, in fo far as they are not reftrained by flatute.
3. There are certain rights naturally confequent on property, which are decmed to be preferved by the crown as regaliu; unlefs they be fpecially conveyed. Gold and filver mines are of this fort; the firt univerfally; and the other, where three half-pennies of filver can be extracted from the pound of lead, by act $14^{2} 4$, (three half-pennies at that time was equal to about two flillings five pennies of our prefent Scots money). Thefe were by our ancient law annexed to the crown; but they are now diffolved from it; and every proprietor is intitled to a grant of the mines within his nwn - lands, with the burden of delivering to the crown a tenth of what fhall be brought up.
4. Salmon-fifhing is likewife a right underfood to be referved by the crown, if it be not exprefsly granted: but 40 years polleffion thereof, where the lands are either crected into a barony, or granted with the general claufe of fifhings, ellablifhes the full right of the falmon fifhing in the vaffal. A charter of lands, within which any of the king's forefts lie, does not carry the property of fuch forelt to the vaffal.
Res publice. 5. All the fubjects which were by the Roman law accounted res publica, as rivers, highways, ports, \&cc. are, fince the introduction of feus, held to be inter regalia, or in parrimonio principis; and hence encroachment upon a highway is faid to infer purprefture. No perfon has the right of a free port without a fpecial grant, which implics a power in the grantee to leyy anchorage and thore dues, and an obligation upon him to uphold the port in good condition. In this clafs of things, our forefathers reckoned fortalices, or fmall
places of Atrength, originally built for the defence of Law the country, either againft foreign invafions or civil Seoth commotions; but thefe nuw pals with the lands in every charter.
6. The vaffal acquires right by his grant, not only Pertine to the lands fpecially contained in the charter, but to thofe that have been poffefled 40 years as pertinent thereof. But, 1 . If the lands in the grant are marked out by fpecial limits, the valfal is circumfcribed by the tenor of his own right, which excludes every fubject without thefe limits from being pertinent of the lands. 2. A right poffiffed under an exprefs infeftment is preferable, ceteris paribus, to one poffeffed only as pertinent. 3. Where neither party is infeft per expercflym, the mutual promiccuous poffeffion by both, of a libject as pertinent, refolves into a commonty of the fubject porfeffed : but if one of the parties has exercifed all the acts of property of which the fubject was capable, while the poffeffion of the other was confined to paturage only, or to calling feal and divot, the firtt is to be deemed fole proprietor, and the other to have merely a right of fervitude.
7. As barony is a nomen univerfitatis, and unites Privite the feveral palts contained in it into une individual of bare right, the general conveyance of a barony carries with it all the different tenements of which it confilts, tho ${ }^{\circ}$ they fhould not be fpecially enumerated (and this holds, even without ercetion into a barony, in lands shat have been united under a (pecial name). Hence, likewife, the poffeffion by the vaflal of the fmalle ct part of the barony-lands preferves to him the right of the whole.
8. The vaffal is intitled, in confequence of his property, to levy the rents of his own lands, and to recover them from his tenants by an action for rent before his own court; and from all other poffeffors and intromitters, by an action of mails and duties before the fheriff. He can allo remove from his lands, tenants who have no leafes; and he can grant tacks or leafes Tack? to others. A tack is a contract of location, whereby leate. the ufe of land, or any other immoveable fubject, is fet to the leffee or tack fman for a certain yearly rent, either in money, the fruits of the ground, or fervices. It ought to be reduced into writing, as it is a righe concerning lands: tacks, therefore, that arc given verbally, to endure for a term of years, are good againft neither party for more than one year. An obligation to grant a tack is as effectual againtt the granter as a formal tack. A liferenter, having a temporary property in the fruits, may grant tacks to endure for the term of his own liferent.
9. The tackfman's right is limited to the fruits which fpring up annually from the fubject fet, either naturally, or by his own induftry; he is not therefore intitled to any of the growing timber above ground, and far lefs to the ninerals, coal, clay, \&c. under ground, the ufe of which confumes the fubftance. Tacks are, like other contracts, perforial rights in their own nature; and confequent!y ineffectual againft fingular fucceffors in the lands; bat, for the encouragement of agriculture, they were, by aCt 1449 , declared effectual to the tackiman for the full time of their endurance, into whofe hands foever the lands might come.
10. To give a written tack the benefit of this fatute,
it muft mention the fpecial tack-duty payable to the proptietor, which thongh fmall, if it be not elufury, fecures the tackiman; and it mult be followed by porfoffion, which fupplies the want of a feifin. If a tack does not exprefs the term of entry, the entry will commence at the next term after its date, agreeable to the rule, 2 uod pure debetur, prafenti die debetur. If it does not mention the ufh, i. e. the term at which it is to determine, it is goed for one year only; but, if the intention of partics to cuntinue it for more than one year, fhould appear from any claufe in the tack (e. g. if the tack fman thould be bound to certain antual preftations), it is futtained for two years as the minimum. Tacks granted to perpetuity, or with an indefnite ifh, have not the bencfit of the flatute. Tacks of houfes withn borough do not fall within this act, it being cuftomary to let thefe from year to year.

11 Tacks neceffarily imply a didedus perfona, a choice by the fetter of a proper perfon for his tenait. Hence the conveyance of a tack which is not granted to aflignees, is ineffectual without the landlord's confent. A right of tack, though it be heritable, falie under the jus maritt, becaufe it cannot be feparated from the labouring cattle and implements of tillage, which are muveable fubjects. A tack, therffore, granted to a fingle woman, without the liberty of aftigning, falls by her mariage; becaufe the marriage, which is a legal conveyance thereof to the humand, cannot be annulled. This implied exclufion of alfignees is, however, limited to volunary, and does not extend to neceffary, arfignments; as an adjudication of a tack by the tackfman's cieditor: but a tack, exprefsly excluding aflignees, canriot be carried even by adjudication. It was not a fixed point for a long time, whether a tenant could fubfet without confent of the landlord; but the court of feffion, in a cafe which occurred a few years ago, denied the power of fubfetting in the tenant. Liferent tacks, becaufe they import a higher degree of right in the tackfman than tacks for a definite term, may be affigned, unlefs affignees be fpecially excluded.
12. If neither the fetter nor tackfinan fhall properly difcover their intention to have the tack diffolved at the term fixed for its expiration, they are underlood, or prefumed, to have entered into a new tack upon the fame terms with the former, which is called tacit re.ocation; and continues till the landiord warns the temant to iemove, or the tenant renounces his tack to the landlord: this uhtains alfo in the cafe of moveable tenants, who pulfefs from year to year without written tacks. In judicial tacks, however, by the court of feffion, tacit relocation neither does nor can take place; for cautioners being interpofed to thefe, they are loofed at the end of the tack: and therefore, where judicial tackfmen poffefs after expiry of their right, they are accountable as factors.
13. In tacks of land, the fetter is commonly bound to put all the houfcs and office-houfcs, neceffary for the farm, in good condition at the tenant's entry; and the tenant mult keep them and leave them fo at his removal. But, in tacks of houfes, the fetter muft not only deliver to the tenant the fubject fet, in tenantable repair at his entry, but uphold it in that repair during the whole yeas of the tack, unlefs it is otherwife covemated betwixt the payties.
14. If the inclemency of the weather, inundation, or calamity of war, fhould have brouglat upon the crop an extraordinary damage (plus quam tolerabile), the landlord had, by the Roman law, no clain for any part of the tack-duty: if the damage was more moderate, he might exact the full rent. It is nowhere defined, what degree of fterility or devaltation makes a lofs plus quam tolerabile; but the general rule of the Roman law feems to be made ours. Tenants are not obliged to pay any futlic burdens to which they are not exprefsly bound by their tack, except mill-fervices.
15. Tacks may be evacuated during their currency, Defitution (:.) In the fane manner as feu-rights, by the tackf of tackso man's ruming in arrear of his tack-duty for two years together. Thisirritancy may be prevented by the tenant's making payment at the bar befure fentence. (2.) Where the terant either runs in arrear of one year's rent, or leaves his farm uncultivated at the ufual feafon; in which cafe he may, by act of federunt 175 G , be ordained to give fecurity for the arrears, and for the rent of the five following crops, if the tack fhall fubfitt fo long; otherwife, to remove, as if the tack were at an end. (3.) Tacks raay be cracuated at any time by the mutual confent of parties.
16. The landlord, when he intends to remove a tenant whofe tack is expiring, or who poffeffes without a tack, mult, upon a precept figned by himfilf, warn a tack, mult, upon a precept figned by himfilf, warn
the tenant forty days preceding the term of Whitfunday, at or immediately proceding the ifh, perfowally, warninga or at his dwelling- bonfe, to remove at that term, with his family and effects. This precept muft be alfo exccuted on the ground of the lands, and thereafter read in the parifh-church where the lands lie, after the morning feevice, and affixed to the moft pateut door thereof. Whitfunday, though it be a moveable fealt, is, in queflions of removing, fixed to the 15 th of May. In. warnings from tenements within borough, it is fufficient that the tenant be warned forty days before the ifh of
the tack, whether it be Whitunday or Martinmas; and that the tenant be warned forty days before the ifh of
the tack, whether it be Whitfunday or Martinmas; and in thefe the ceremony of chalking the door is futained. as warning, when proceeding upon a verbal order from the proprietor.
17. This procefs of warning was precifely neceffary for found ng an action of removing againt tenants, till the aft of federunt 1756 , which liaves it in tiue option
of the proprictor, either to ufe the former meth d, or the act of federunt 1756 , which leaves it in the option
of the proprietor, either to ufe the former meth d , or to bring his aetion of removing before the judye.crdinary: which, if is be called 40 days be fore the faid term of Whit funday, fhall be held as equal to a warning.
Where the tenant is bound, by an txprefs claufe of his Where the tenant is bound, by an exprefs claufe of his tack, to remove at the ifh without warning, fuch of .. ligation is, by the faid act, declared to tec a fufficient warrant for letters of horning, upon which, if the landlord charge his tenant furty days before the faid
Whitfunday, the judge is authorifed to eject hiun landord charge his tenant furty days before the faid
Whitfunday, the judge is authorifed to eject hinn within fix days after the term of removing expreffed in the taik.
18. Actions of removing might, even before this act of federunt, have been puriued without any previous warning (1.) Againft wicious poffeffors, i. e. perfons Actions of warning (i.) Againft wicious poffeffors, i. e. perfons A Ations of
who had feized thic poffefion by force, or who, without renioving any legal title, had intruded into it, after the laft por. feffor had given it up. (2.) A gairft poffeffors who lad a naked tolerance. (3.) Againft tenants who hod run
rem

Violent profits.

Effect of warning not iafilted in.

Hypothce.
in arrear of rent, cluring the currency of their tacks. (4.) Againfe fuch as had fold their lands, and yet continued to poftefs after the term of the purchafer's entry. Upon the fame ground, warniog was not required, in removings againtt poffeffors of liferented lands, after the death of the liferenter who died in the natural poffeffion: but if he poffeffe by tenants, thefe tenants could not be difturbed in their poffeffions till the next Whitfunday, that they might have time to look out for other farms; but they might be compelled to remove at that term, by an action of removing, without warning.
19. A landlord's title in a removing, let it be ever fo lame, cannot be brought under queltion by a tenant whofe tack flows immediately from him; but, if he is to infiet againft tenants not his own, his right muft be perfected by infeftment, unlefs it be fuch as requires no infeftment ; as terce, \&xc.
20. The defender, in a remeving, mult (by act 1555), before offering any defence which is not inflantly verified, give recurity to pay to the fetter the violent profits, if they floold be awarded againd him. Thefe are fo called, becaufe the law confiders the tenant's poffeftion after the warning as violent. They are estimated, in tenements within borough, to double the rent; and in lands, to the highelt profits the purfner could have made of them, by poffeffing them either by a tenant or by himiclf.
21. If the action of removing fhall be paffed from, or if the landlurd fhall, dfter ufing warning, accept of rent from the tenant, for any term fublequent to that of the removal, he is prefumed to have changed his mind, and tacit relocation takes place. All actions of removing againt the principal or original tackfman, and decrees thereupon, if the order be ufed, which is fet forth fupra (:7.), are, by the act of federunt 1756, declared to be effectual agairft the affignees to the tack or fubtenants.
22. The landlord has, in fecurity of his tack-duty, over and above the tenant's perfonal obligation, a tacit pledge or hypothec, not only on the fruits, but on the cattle pafturing on the ground The corn, and other fruits, are hypothecated for the rent of that year whereof they are the crop; for which they remain affected, though the landlord Thould not ufe his right for years together. In virtue of this hypothec, the landiord is intitled to a preference over any creditor, though he has actually ufed a poinding; except in the fpecial cafe, that the poinding is executed after the term of payment, when the landlord can appropriate the crop for his payment, the poinder in fuch cale being obliged to leave as much on the ground as ro fatisfy the land. lord's hyputhec: and it has been lately found, that this right of the landlord is preferable even to a debt due to the crow:, for which a writ of extent had been iffued: but the cafe here alluded to is prefently under appeal.

No 177.
23. The whole cattle on the ground, conftdered as a La quantity, are hypothecated for a year's rent, one after sion another fucceffively. The landlord may apply this hypothec for payment of the paft year's rent, at any time within three months from the laft conventional term of payment, after which it ceales for that year. As the tenant may increafe the fubject of this hypothec, by purchaling oxen, theep, \&c. fo he can inpair it, by fclling part of his ftock ; bur if the landlord fufpects the tenant'a management, he may, by fcqueftration or poinding, make his right, which was bifore general upon the whole fock, fpecial upon every individual. A fuperior has alfo a hypothec for his feu-duty, of the fane kind with that juft explained.
24. In tacks of houfes, breweries, fhops, and other tenements, which have no natural fruits, the furniture and other goode broughi into the fubject fet are hypothecated to the landlord for one year's rent. But the tenant may by fale impair this hypothec, as he might that of cattle in rural tenements; and indeed, in the particular cafe of a fhop, the tenant rents it for no other plapole than as a place of fale.

## Sect. VII. Of the tranfmiffon of rights, by confirmation and refignation.

A vassal may tranfmit his feu either to univerfal Tranf fucceflis, as heirs; or to fingular fucceffors, i. e. thofe fion ": who acquire by gift, purchafe, or other fingular tide. dal ry This laff fort of tranfmiffion is either voiuntary, by difpolition ; or neceffary, by adjudication.
2. By the firt feudal rules, no fuperior could be compelled to receive any vaffal in the lands, other than the heir exprefled in the inveftiture; for the fuperior alone had the power of afcertaining to what order of heirs the fee granted by himfelf was to defcend. But this right of refufal in the fuperior did not take place, (1.) In the cafe of creditors apprifers or adjudgers, whom fuperiors wete obliged to receive upon payment of a year's reat (14 19, c. 371672, c. 19.) : (2.) In the cafe of purchafers of bankrupt eftates, who were put on the fame footing with adjudgers by 1690 , c. 20. The crown retufes no voluntary difponee, on his paying a compofition to the exchequer of a fixth part of the valued rent. Now, by 20 Gto. I1. fuperiors are disected to enter all fingular fucceffors (except incorporations) whe fhall have got from the vaffal a difpofition, containing procuratory of refignation; they always receiving the fees or cafualties that law intitles them to on a vaffal's entry, i. e. a year's rent (A).
3. Bafe righta, i.e. difpofitions to be holden of the Bafer difponer, are tranfmiffions only of the property, the fuperiority temaining as formerly. As this kind of right might, before eftablifhing the regifters, have been kept quite concealed from all hut the granter and receiver, a public right was preferable to it, unlefs cloathed
(A) It was long matter of doubt how this compofition due to the fuperior upon the entry of fingular fucceffors fhould be regulated. The matter at laft received a folemn decifion; finding, That the fuperior is intitled, for the entry of fingular fucceffors. in all cafes where fuch entries are not taxed, to a year's rent of the fubject, whether lands or houfes, as the fame are fet, or may be fet at the time; deducting the feuduty and all public bundens, and likewife all annual burdens impofed on the lands by confent of the fuperior, with all reafonable annual repairs to houfes and other perifhable fubjects.
rof cloathed with poffeflion: but as this diftinetion was no longer neceffary after the eftahlifhment of the records, all infeftments are declared preferable, according to the dates of their feveral regittrations; without refpect to the former diftinction of bafe and public, or of being cloathed and not cloathed with poffeffion.
4. Public rights, i. e. difpofitions to be holden of the granter's fuperior, may be perfected either by confirmation or refignation; and therefore they generally contain both precept of feifin and procuratory of refignation. When the receiver is to complete his right in the firt way, he takes feifin upon the precept: but fuch feifin is ineffectual without the fuperior's contirmation; for the difponee cannot be deemed a vaffal till the fuperior rective hins as fuch, or confirm the holding. By the ufual ftyle in the tranfmifion of lands, the difpofition contaius an obligation and precept of infeftement, both a me and de me, in the option of the difponee ; upon which, if feifin is taken indefritely, it is conftrued in favour of the difponee to be a bafe infeftment, becaufe a public right is null without confirmation: but if the receiver fhall afterwards obtain the fuperior's confirmation, it is confidered as if it had been from the beginning a public right.
5. Where two feveral public rights of the fame fubjeet are confirmed by the fuperior, their preference is governed by the dates of the confirmations, not of the infeftments confirmed; becaufe it is the confirmation which completes a public right.
6. Though a public right becomes, by the fuperior's confirmation, valid from its date; yet if any mid impediment intervene betwixt that period and the confirmation, to hinder the two from being conjoined, e. $g$. if the granter of a public right thould afterwards grant a bafe right to another, upon which feifin is taken before the fuperior's confiratation of the lirlt, the confirmation will have effect only from its own date; and confequently the bafe right firt completed will carry the property of the lands preferable to the public one.
7. Refignation is that form of law, by which a vaffal furrenders his feu to his fuperior; and it is either ad perpetuam remanentiam, or in favorem. In refignations ad remanentiam, where the feu is refigned, to the effect that it may remain with the fuperior, the fuperior, who before had the fuperiority, acquires, by the refignation, the property alfo of the lands refigned: and as his infeftment in the lands fill fubfilted, notwithflanding the tight by which he had given his vaffal the property; therefore, upon the vaffal's refignation, the fuperior's right of property revives, and is confolidated with the fuperiority, without the neceffity of a new infeftment; but the inftrument of refignation mult be recorded.
8. Refignations in favorem are made, not with an intention that the property refizued flould remain with the fuperior, but that it fhould be again given by him, in favour either of the refigner himfelf, or of a third party ; confequently the fee remains in the refigner, till the perfon in whofe favour refignation is made gets his right fiom the fuperior perfected by feifin. And becaule refignations in fuvorem are but incomplete perfonal deeds, our law has made no provifion for recording them. Hence, the firft feifin on a fecond refigna-

Vol. IX. Part II.
tion is preferable to the laft feifin upon the firt refig. nation; but the fuperior, accepting a fecond refignation, whereupou a prior feifin may be taken in prejudice of the firit refignatory, is liable in damages.
9. By our former decifions, one who was velled with a perfonal right of lands, i. e. a right not completed by feifin, effectually divelcd himfelf by difponing it to another; after which no right remained in the difponer, which could be carried by a fecond difpofition, becaufe a perfonal right is no more than a jus olligationis, which may be transferred by any deed fufficiently expreffing the will of the granter. But this doctrine, at the fame time that it rendered the fecurity of the records extremely uncertain, was not truly applicable to fuch rights as required feifin to complete them; and therefore it now obtains, that the granter even of a perfonal right of lands is not fo divetted by conveying the right to one perfon, but that he may effectually make it over afterwards to another; and the preference between the two does not depend on the dates of the difpofitions, but ou the priority of the feifins following upon them.

> Sect. VIII. Of Redeemable Rights.

An heritable right is faid to be redeemable, when Reverfions it contains a right of reverfion, or return, in favour of the perfon from whom the right flows. Reverfions are either legal, which arife from the law itfeif, as in adjudications, which law declarts to be redeemable within a certain term after their cate; or conventional, which are conttituted by the ag: eement of parties, as in wadfets, rights of annualrent, and rights in fecurity. A wadfet (from wad or pledge) is a right, by Wadfet. which lands, or other heritable fubjects, are impignorated by the proprietor to his creditor in fecurity of his debt ; and, like other heritable rights, is perfected by feifin. The debtor, who grants the wadiet, and has the right of reverfion, is called the revorfer; and the creditor, receiver of the wadfet, is called the ruadfetter.
2. Wadfets, by the prefent practice, are commonly made out in the form of mutual contracts, in which one party fells the land, and the other grants the right of reverfion. When the right of reverfion is thus incorporated in the body of the wadfet, it is effectual without regillration; becaufe the fingular fucceffor in the wadfet is, in that eafe, fufficiently certified of the reverfion, though it be not regittered, by looking into his own right, whick bears it in gremio. But where the right of reverfion is granted in a feparate writing, it is ineffectual againt the fingular fucceffor of the wadfetter, unlefs it be regittered in the regitter of feifins within 60 days after the date of the - feifin upon the wadfet.
3. Rights of reverfion are generally efteemed Ariciz $_{\text {Reverfa }}$ juris; yet they go to heirs, though beirs fhould not is $\beta_{\text {rigiti } j z}$ be mentioned, unlefs there he fome claufe in the right, ris. difcovering the intention of parties, that the reverfion fhould be perfonal to the reverfer bimfelf. In like manner, though the right fhould not exprefs a power to redeem from the wadfetter's heir, as well as from himfelf, redemption will be comptent againlt the heir. All our lawyers have affirmed, that reverfions cannot
tion.

Letters of
regrefs.
be affigned, unlefs they are taken to affignees; but from the favour of legral difigence, they may be adjudged.
4. Reverfions commonly leave the reverefer at liberty to redeem the lands grandorenque, without welriction in guint ef time; bue a clanfe is adjeeted to fome reverfion, that it the cit't be not paid ayaint a determinate day. the right of reverion fhatl he irritated, and the lancis frall become the irredcemable ponperty of the wadiater. Nevertheidis, the irmitany being penal, as in wadfetf, wiere the fum lem folls zlways thent of the value of the lands, the right of relemp. tion is by indurgence consinued to the revofer, even after the term hes expired, wile the irritancy is not declared but the reverice, if the does not take the benefit of this insulgence within 40 years after the lapfe of the term, is cut out of it hy prefeription.
5. If the ecverfer would redeem lis lands, he mult whe an order of redemphim apsint? the wadfetter : the firt tlep of which is premonition (or natice given under form of inilrument) to the walfetter, to appear at the time and place appointed by the reverfinn, then and these to receive payment of his debt, and thereupon to renounce his right of wadfet. In the voluntary redemption of a right of wadet hiden bafe, a renunciation duty regiffered re-ellablifhes the reverfer in the full right of the tands. Where the wadfer was granted to be holden of the gramer's fuperior, the fuperior muft receive the reverfer, on payment of a year's rent, if lie protuce a difpofition from the wadfeter, containing procuratory of refignation. If, at executing the wadfet, the fuperior has granted letters of regrefs, i.e. an ubligation again to cnter the reverfer upon redemption of the lanels, he will be obliged to receive hin, without payment of the year's rent. Bat letters of regrefs will not have this effect againd fingular fucceffors in the fuperiority, if they are not regitered in the regifter of reverfions. All wadfets that semain perfonal rights, are extinguifhed by fimple difcharges, though they flould not be recorded.
6. If the wadfetter cither does not appear at the

Redemp-
tion money. time and place appninted, or refufes the redemptionmoncy, the reverfer mull confign it under form of inflrument, in the hands of the perfon appointed in the right of revertion; or, if no perfon be named, in the hande of the clerk to the bills, a clerk of feffion, or any refponfal perion. An inftrument of conifignation, with the confignatory's receipt of the money configned, complete3 the order of redemption, flops the farther currency of intercit againlt the reverfer, and founds him in an action for declaring the order to be formal, and the lands to be redeemed in confequence of it .
7. After decree of declarator is obtained, by which the lands are declared to return to the debtor, the configned moncy, which comes in place of the lands, becumes the wadfetter's, who theiefore can change the confignatory upon letters of horming to deliver it up to hiun; but, becaufe the reverfer may, at any time before decree, pafs from his order, as one may do froms any otber dep of diligence, the configned fume continue to belong to the reverfer, and the walleter's intereft in she wadfot continues heritable till that period.
8. If the wadfetter choefes to have his money 1 a-
ther than the lands, he mufl require from the reverfer, Law under form of inftrument, the fums due by the wad. Sco: $f: t$, in terms of the right. The wadfet-fums continue heritable, notwithtanding requifition, which may be paffed from by the wadfetter wen after the reverfer has configned the redemption-money in confequence thereof.
9. Wadfets are either proper or improper. A pro- Wadf. per wadlet is that whereby it is appreed, that the ufe propert of the land fhall wo for thee ofe of the money ; for that in:pro the wadfetter t.akes his hazard of the rents, and rnjoys them vithout accounting, in fatisfartion, or in folurum of his interell.
10. In an improper wadfet, the reverfer, if the rent fhould fall fhort of the interell, is taken bound to make up the deficiency; if it amounts to more, the wadfetter is olliged to impute the excrefence towards extinction of the capital: And, as foon as the whole fams, principal and interelt, are entinguithed by the wadfetter's pofieftron, he naay be compelled to renounce, or diveft himfelf in favour of the reverfer.
it. If the wadfetter be inticled by his right to enjoy the rents without accounting, and if at the fame time the reverfer be fubjected to the hazard of their deficiency, fuch contract is juitly declared ufarious: and alfo in all proper wadfets wherein any unteafunable adrantage has heen taken of the debtor, the wadfetter mult (by act 1061), during the not requifition of the fum lent, either quit his poffelfion to the dibtor, upon his giving fecuity to pay the interelt, or fubject him. felf to accouat for the furplus-rents, as in inproper wadfets.
12. Infefiments of annualrent, the nature of which Right has been explained, are alfo redeemable rights. $A^{\text {ansua }}$ right of annualrent does not carry the property of the lands; but it creates a real nexus or burden upon the property, for payment of the intcrelt or anmalrent contained in the right; and confequently the bygone inturells duc upon it are debita fundi. The annuairentcr may therefore either infift in a real action for obtaining letters of poinding the ground, or fue the tenant in a perfonal action towards the payment of his palt interefl: and in a competition for thofe rents, the annualrenter's preference will not depend on his having ufed a puinding of the ground, for lis right was comphted by the feifin; the power of poinding the ground, arifing fiom that antecedent right, is mera faculatis, and need not be exercifed, if payiment can be otherwife got. As it is only the intereft of the fum lent which is a burden upon the lands, the annuairenter, if he wants his principal fum, cannot recover it eicher by poinding or by a perfonal action againft the debtor's tenants; but muit demand it from the debtor hirr[elf, on his perfonal obligation in the bond, either by requifition, or by a charge of letters of horning, according as the right is drawn.
13. Rights of annualrent, being fervitudes upon the praperty, and confequently conlificut with the tight of property in the debtor, may be extinguifhed without relignation.
14. Infeftments in fecurity are another kind of re- Righ deemable rights (now frequcntly uled in place of rights of ammalrent), by which the recelvers are infeft in the lands themfetves, and not fimply in an amualrent forth of them, for fecurity of the principal fums, intereft,
and penaly, contained in the rights, If an infefrment in fucurity be granted to a creditor, he may therenp:

 prietors of tenements waithin the city of Ealinhurgh. There is as great a varicty of conventional rervituiles, as there are ratys hy which the exercife of property may be rellained by paction in favour of another.
2. Consernional fervitules are comatuterl, cither by grant, where the will of the party hurdened is cxpe ffed in writing: arty prefcription, where his confent is pre fumed from his acruiefecmee in the burden for 40 yeare. A fervitule eronitituted by writing, or grout, is not effectiol againth the granter's fingular fucceffers, undels the grantee has be ol in the nee or exercife of his right: bot they are valid aggan't the granter and his heirs, even whent ufe. In fervitudes that tray be acequired by prefeription, 40 years exercife of the tight is finfficient, without any title in writing, other than a char. ter and feifin of the lauls to which the fervitude is claimed to be due.
3. Servitudes conflituted by grant are not effectual, in a quettion with the fuperior of the tenement burdencd with the fervitude, 1 inlets his confent be adhibite.l; for a fuperior cannot be hurt by his vaffal's deed: bint where the fervitude is acquited by prefcription, the confent of the fuperior, whofe right afforded him 1 good title to isterruft, is implied. A fervitude by grant, thougha followed only loy a partial poffefion, mult be governed, as to its extent, by the tenor of the grant; hut a lervitude hy prefeription is linited by the meafure or degree of the ufe had hy him who preferibes: agrecably to the maxin, Tanthon praforiptum, quantum paflefum.
4. Serviudes are eitlier prectial or perfonal. Pretial fervitudes are hurdens impofed upon one tenement, in favour of another tenement. That to which the fervi-
orolorno
tude is due is cailed the dominant, and that which owes it is called the firvime tenement. No perfon can have right to a predial fiervitude, if he is not proprietor of fome dominant tenement that may have benelit by it ; for that right is annexcid to a tenement, an! fo canuot pafa from nue perfon to another, ankels fome tenement gota aloug with it.
5. Irchlial fervitules are divide 1 into rural fervitule?, or of lands; and urban fervituden, or of houfes. The Rumal fervi. rural fervitules of the Romans were iter, aibus, viit, tulcs. a auedualis, aquabumplus, and jus pufcoudi procris. Sínilar fervitudes may be conllituted with ne, of a font. roa3, honferond, cart-rmal, dains, and aqueduets, witer ing of cattle, an 1 pallurase. The right of a hith hway is not a fervitule contitures in favour of a perticular tencment, but is a right common to all traveilern. The care of high waya, bridges, and ferrics, is com. mitted to the ficriff, jullices of ptace, and commifion. ero of fupply in each thire.
6. Common paltarage, or the risht of feeding one's cattle upan the propsiry af another, is fometimes conRisuted hy a generalclaufe of pallurase in a charter or difpolition, without mentinain $r$ the lands burdened; in which cafe, the ight comprehends whatever had been firmeily appropriated to the lands difponed out of the egranter's own property, and likewile all pallurage due to them out of other lands. When a right of palturage is given to feveral ne ighbeuring proprietors, on a moot or common blonging to thic gramter, indefinite as to the number of cattle to be pallured, the extent of their feveral ights is to be proportioned ac. cording to the number that cach of them can folder in winter hipon his own dominant telrement.
7. The chief fervitudes of houfes among the Ro- Urtan fere mans were thofe of lupport, viљ, tismi manitundi, and vitudcs onteris fercall. The firit was the right of lixins in our nechithours wall a juilt or bean from our houle: the fecond was that of relling the weight of onc'a herufe upon his neigl. poure's wall.
8. With His, where different floors or Itorics of the fame lurufe belong to difierent perfons, as is frequent in the sily of E.dinbugh, the property of the houfe canase be fuid to be entirely divided ; the ronf remains a common toof to the whole, and the area on which the howe liands fupports the whole; fo that there is a communication of property, in conlequence of which the proprictor of the ground-floor mult, without the conllitution of any fervitude, uphold it for the fupport of the upper, and the owner of the highelt ltory nuit uphold that as a cover to the lower. When the higheft floor is divided into garrets among the feveral proprictors, each proprietor is obliged, according to this rule, to uphold that part of the roof which covers his own garret.
9. No proprictor can build, fo as to throw the rainwater falling from his own houf, immediately upon his neighbour's ground, without a fpecial fervitude, which is called of filliside; but, if it falls within his own propeity, though at the fmallell dillance from the march, the owner of the inferior tenement mult recrive it.
10. The ferviaudes alitus non tollcudi, et non officiendi luminilus vel forofpeciui, rellrain proprictors from raifing their houles beyond a certain leight, or from making any building whatfocver that may hurt the light 4 Q $^{2}$

 tudes cannot be conltituted by prefcription alone : for, though a proprietor hould have his houfe ever folow, or thould not have built at all upon his grounds for to years together, he is prefumed to bave done fo for his own conveniency or profit ; and therefore cannot be barred from afterwards building a houfe on his property, or raifing it to what height he pleafes, unlefs he be tied down by his own confent.
Servitude of it. We have two predial fervitudes to which the feal and di- Romans wete frangers, viz. that of fuel or feal and vot. divot, and of thirlage. The firft is a right, by which the owner of the dominant tenement may turn up peats, turfs, feals, or divots, from the grumed of the fervient, and carry them off either for fuel, or thatch, or the other ufes of his own tenement.
12. Thirlage is that fervitude, by which landsare aftricted, or thirled, to a particular mill ; and the poffeffors bound to grind their grain there, for payment of certain multures and fequels as the agreed price of grinding. In this fervitude, the mill is the dominant tenement, and the lands aftricted (which are called a'fo the thirl or fucken) the Cervient. Multure is the quantity of grain or meal payable to the proprietor of :he mill, or to the multerer his tackfiman. The fequels are the fmall quantities given to the fervants, under the name of knavefbip, bannock, and lock or gowpen. The quantitics paid to the mill by the lands not aAricted, are generally proportioned to the value of the labour, and are called out town or out fucken mmaltures; but thofe paid by the thirl are ordinarily higher, and are called in-tozun or in fucken multures.
13. Thirlage may be conllituted by a land-holder, when, in the difpofition of certain lands, he aftricts them to his own mill; or when, in the difpofition of a mill, he affricis his own lands to the mill difponed; or when, in letting lis lands, he makes it a condition in the tacks. The grant of a mill with the general claufe of multures, without fpecifying the lands aftricted, conveys the thirlage of all the lands formerly aftricted to that mill, whether they were the property of the granter, or of a third party.
14. A lefs furmal conttitution ferves to aftrict ba-rnny-lands to the mill of the barony, than is neceflary in any other thirlage; which perhaps proceeds from the effects of the union betwixt the two. Hence, if a baron makes over the mill of a barony, cum multuris, or cumn afrizits multuris, it infers an aftriction of the barony lands to the mill conveyed, although they had not formerly been allricted. But if, prior to the baron's conveyance of his mill cum multuris, he had fold any part of the barony-lands to another cumn multuris, the firt purchafer's lands are not allricted by the putterior grant ; for a right of lands with the multures, implies a freedom of thefe lands from thirlage.
15. Thirlage is either, I. Of grindable corns; or, 2. Of all growing corns; or, 3. Of the invelta et illata, i. e. of all the grain brought within the thirl, though of another growth. Where the thirlage is of grindable grain, it is in practice reftritted to the corns which the tenants have occation to grind, either for the fupport of their families, or for other ufes; the furplus may be carried out of the thirl unmanufactured, without being liable in multure. Where it is of the grana crefertias, the whole grain growing upon the thirl is
attricted, with the exceptions, 1. Of feed and boife. corn, which are dellined to ufes inconiftent with grinding; and, 2. Of the farm duties due to the landlord, if they are delivered in grain not grinded. But, if the rent be payable in meal, fluur, or malt, the grain of which thefe are made mult be manufactured in the dominant mill.
i6. The thirlage of inveria et illata is feldom conRituted but againft the inhabitants of a borough or village, that they fhall grind all the unmanufactured grain they import thither at the dominant mill. Multure, therefore, cannot be exacted in a thirlage of invectu et illuth, for flour or oat-ineal hrought into the lervient tenement, unlefs the importer had bought it in grain, and grinded it at another mill. The fame grain chat owes multure, as granum crefcens, to the mill in whore thirl it grew, if it fhall be afterwards brought within a borough where the invecha et illata are thirled, mult pay a fecond multure to the proprietor of that dominant tenement ; but, where the right of thefe two thirlages is in the fame proprietor, he cannot exat bnth. Where lands are thirled in general terms, without expreffing the particular nature of the fervitude, the lightelt thirlage is prefumed, from the favour of liberty ; but in the aftriction of a burough or village, where there is no growing grain which can be the fubject of thirlage, the attriction of invella et illata mult be neceffarily underttood.
17. Thirlage, in the general caic, cannot be eftablilhed by prefription alone, for iiss que funt merad fil cultatis zon prafcribitur; but whiere one has paid for 40 years together the heavy infueken mulcures, the flighteft title in writing will fubject his lunds. Thirlage may, contrary to the common rule, be conlituted by prefcription alone, r. Where one pays to a mill a certain fum, or quantity of grain yearly, in tame of multure, whether he grinds at it or not, (called dry multure). 2. In mills of the king's ploperty ; which is contlituted jure coronc, without titles in writing; and, where he derives right from another, his titles are more liable to be loft. This is extended in practice to mills belonging to church-lands, where thirty years poffeffion is deemed equivaler.e to a title in writing, from a prefumption that their rights were defroyed at the reformation. Though thirlage itfelf cannot be conttituted by mere poffeffion, the proportion of multure payable to the dominant tenement may be fo fixed.
18. The poffefiors of the lands aftricted are bound to uphold the mill, repair the dam-dykes and aqueducts, and bring home the millfones. Thefe fervices, though not expreffed in the conflitution, are implied.
15. Servitudes, being reftraints upon property, are servi", Ariali juris: they are not therefore prefumed, if the ris. acts upon which they are'claimed can be explained confiltenty with freedom; and, when fervitudes are conftituted, they ought to be ufed in the way leaft burdenfome to the fervient tenement. Hence, one who has a fervitude of peats upon his neighbour's mofs, is not at liberty to extend it for the ufe of any manufacture which may require an extraordmary expence of fuel ; but muft confine it to the natural ufes of the duminant tenement.
20. Servitudes are extinguifhed, (r.) Confufione, when the perfon comes to be proprietor of the domi-
nant and fervient tenements; for ris fua nomiai fervit, and the ufe the propietor thereafter makes of the fervient tenement is not jure forvitulis, but is an act of property. (2) By the perifhing either of the domi nant or fervient tenement. (i.) Servitudes are lolt non utendo, by the dominant 'renement neglecting to whe the right for 40 years; which is confidered as a dereliction of it, though he who lias the fervient tenement Thould have made no interruption by doing acts con. trary to the fervitude.
21. Perfonal fervi udes are thofe by which the property of a lubject is burdened, in favour, not of a tenement, but of a perfon. The only perfonal fervitude known in'our law, is ufufruct or liferem: which is a right to ufe and ajoy a thing during life, the fubitarice of it being preferved. A liferent cannot therefore be conllituted upon things which perifh in the ufe; aud thorgh it may upon fnbjects whick gradually wear out by time, as houfchold furniture, \&c. yet with us, it is generally applied to heritable fubjects. He whofe property is burdened, is ufually called the fur.
22. Liferents are divided into conventional and legal. Conventional liferents are either fimple, or by refervation. A fimple liferent, or by a feparate conflitution, is that which is granted by the proprietor in favour of another: Aud this fort, contrary to the nature of predial fervitudes, requires feifin in order to affect fingular fucceffors; for a liferent of lands is, in ftrict fpeech, not a fervitude, but a right refembling property which conftitutes the liferenter vaffal for life ; and fingular fucceflors have no way of difcovering a life-rent-right, which perhaps is not yet commenced, but by the records; whereas, in predial ?ervitudes, the conftant ofe of the duminant tenement makes them pub. lic. The proper iight of liferent is intranfmiffible; offibus ufufruchuarii inbaret: When the protits of the liferented fubject are tranfmitted to another, the right becomes merely perfonal: for it intitles the allignee to the rent, not during his own life, but his cedent's; and is therefore carried by fimple affignation, without feifin.
23. A liferent by refervation, is that which a proprietor referves to himfelf in the fame writing by which he conveys the fee to another. It requires no feifin; for the granter's former feifin, which virtually included the liferent, ftill fubills as to the liferent which is exprefsly referved. In conjunct infeftments taken to hufband and wife, the wife's right of conjunct fee refolves, in the general cafe, into a literent.
24. Liferents, by lazu, are the terce and the courtefy. The terce (tertia) is a liferent competent by law to widows, who have not acctpted of fpecial provifions, in the third of the herisable fubjects in which their hufbands died infeft; and takes place only where
the marriage has fublifed for ycar and day, or where a child has been born alive of it ( 1 ).
25. The terce is not limited to lands, but extends to teinds, and to fervitudes and other burdens affecting lands; thus, the widow is intitled, in the right of ber terce, to a liferent of the third of the fums lecured, either by rights of annualrent, or by rights in fecurity. In improper wadfets, the terce is a third of the fum lent : In thofe that are proper, it is a third of the wadfet lands; or, in cafe of redemption, a thitd of the redemption money. Neither rights of reverlion fuperiority, nor patronage, fall under the turee; for none of thefe have fixed profits, and fo are not proper fubjects for the widow's fubfiftence; nor tacks, becaufe they are not feudal rights. Burgage tenements are alfo excluded from it, the reafon of which is not fo obviuus. Since the hufband's fitin is beth the meafure and fecurity of the terce, fuch debts or diligences alone, as excluoe the hufband's feifin, can prevail over it.
26. Where a terce is due out of lands burdened with a prior cerce ftill fubtifing, the fecond tercer has only right to a third of the two thirds that remain unaffected by the firft terce. But upon the death of the firtt widow, whereby the lands are difburdened of her terce, the leffer terce becomes collarged, as if the firlt had never exitted. A wiJow, who has accepted of a fpecial provifion from her humand, is thereby excluded from the terce, unlefs fuch provifon fhall contain a claufe that fhe hall have right to both.
27. The widow has no title of poffeffion, and fo cannot receive the rents in virtue of her terce, till the be ferved to it; and in order to this, the mult wbtain-a brief out of the chancery, directel to the fheriff, who calls an inqueft, to take proof that the was wife to the deceafed, and that her huband died inftft in the fubjects contained in the brief. The fervice or featence of the jury, finding thefe points proved, does, with out the neceffity of a retour to the chancery, intitle the wife to enter into the poffefion ; but the can ouls poifefs with the heir pro indivifo, and fo cannot remove tenants till the fleriff kens her to her terce, or divides the lands between her and the heir. In this divilion, after determining by lot or kavil, whether to begin by the fun or the fhade, i. e. by the eaf or the welt, the fheriff fets off the two firlt acres for the heir, aud the third for the widum: Sometimes the divifion is executed, by giving one entire farm to the widow, and two of equal value to the heir. The widow's right is not properly conllituted by this fervice ; it was conttituted before by the huband's feifin, and fixed by his death; the fervice only declares it, and fo intitles her to the third I $\cdot$ rt of the rents retro to her hulband's death, preferable to any rights that may have affected the lands in the intermediate period between that and her
(A) In the cafe referred to, when treating of the effects of the diffolution of marriage within the year without a living child, and where no fpecial provifions had been granted to, or accepted by, the widow; the did not demand her legal provifions of terce or jus reliike, but merely infifted, that as widow the was intitled to be alimented out of the heritable eitate of which her hulband died poffeffed: So that the decifion in that cafe cannot fo properly be faid to be an alreration in the law, as an equitable interpofition oi the court of Cefion, in their capacity as a court of equity, in order to grant a fubbiftence to the widow of a man whofe ellate was fully fufficient, and who, it could not reafonably be prefumed, would have inclined that his widow thould be deft deftitute, when his eflaie went perhaps to a difant feries of heirs.
ful wie to the ceceafed, mutt be leved, netwihhitand. ing any obj tions by the heir againt the marrigge, which may be afterwards tried by the commifiary.
28. Coartefy is a lierent given by law, to the furmiving levband, of all bia wife's heritage in whish the died infeft, if there was a child of the marrige botn alive. A marriage, though of the longeft contimume. gives no right to the courtefy, if there was $n$ iffie of jt. The child hown of the marriage mult be the mother's heir: If he 'ad a child of the former marriage, who is to fucceed to her eflate, the huiband has no right to the courtefy while fuel child is alive f fo that the conrtefy is cure to the hufband, ather as father to an heir, elian as hufoand to an heirefa. Heritege is here erpoped to congueft ; and for is to be underitnod only of the heritable rights $t 0$ which the wife fecceeded as heir to her anceftors, excluding what the therfelf had arquired by fingular titles.
29. Because the hulband enjoys the liferent of his wife', volhole heritage, on a lacrative tiele, he is cerrfidered as her tempo:ary reprefentative ; and fo is liable in payment of a!l the yearly burdens chargeable on the fubject, and of the current intereat of all her debte, real and perfonal, to the value of the yearly rent be enjoys hy the comitefy. The courtefy needs no fuicmnity 10 its conflitution: That right which the huibund had to the rents of his wife's cllate during the marriage, jure mariti, is continued with him after her death, under the name of coutcefy, by an act of the law itfelf. As in the terce, the hubatid's feifin is the grourd and meafure of the wife's right: fo in the couriefy, the wife's feifin is the foundation of the hufuand's; and the two riglits are, in all nther refpects, of the fame nature : if it is not that the courtefy extends to burrage bo!dings, and to fuperiorities.
30. All liferenters mult vfe their right fator reif futfantia: whatever therefore is part of the fee iffelf, cannot be incroached on by the liferenter, $e$ g. woods or growing timber, even for the neceflary utes of the liferented renement. But, where a coppice or filva crdua has been divided into hags, one of which was in ufe to he cut annuilly by the proprietor, the liferenter may continue the former yearly cuttings; becaufe thefe are confidered as the annual fruits the fubject was intended to yield, and fo the proper fubj $=\mathfrak{Z}$ aff a liferent.

3r. Liferenters are bound to keep the fubject liferented in proper repair. They are alfo burdened with the alimony of the heir, where he has not enough for maintaining himfelf. The bare right of apparency founds the aetion againg the liferenter. It is a burden perfonal to the liferenter himfelf, and cannot he:thruwn upon his adjudging credirors as coming ia his place by their diligences. Liferenters are alfo fubjected to the payment of the yearly ceffes, llipends, \&cc. falling due curing their right, and to all other burdens that attend the futject iiferented.
32. Liferent is extinguifhed by the liferenter's death. Tliar part of the rents which the liferenter had a proper rimht to, before his death, falls to his executors; the reft, as never having been in boais of the deceafed, goes to the fiar. Martinmas and Whitfuncay are, by our cuftom, the legal terms of the payment of rent: confequently, if a liferenter of lands furvives the term of Whiffunday, his exccutors are intilled to the half
of that year's rent, becan? it was shes the term before his death; and if he fervives the icrim of Martinmae, they have right to the woole. If the liferenter, biag in the natural poffeflon, and having firt fo:sed the ground, fhould die, even before Whitfurday, his executors are intitled to the whole crop, in refpect that both feed and induftry were his. In a liferent of money contitoted by a moveable bond, the executors have a right to the interef, do:en to the very day af the lifirenter's death, where no terms are men!ined for the payment thereof; but in the are of an hutitahle bond, or of a money liferent fecured on land, the interelts of lifcrenter and fiar (or of heir and esuchior, for the fame ruies ferve to ti: the interats of both) are both ginveries by the !e al ternas of land-rent, without regaid to the conventioni.
Secr. X. of Teinu's.

Tel:ads, or tithes, are that liçuid proportion of Tcinds. our rents or goons, which is due to charchmen, for performing divine fervice. or exerciliag the other \{piritual furctions proper to their feveral offices. Molt of the canonils niliras, t\} at the precife proportion of a tenth, not only of the fruits of the ground. but of what is acquired loy perfonal indultry, is due to the Chriblian clergy, of divine right, which tines therefure call the profer patrimony of the charch; though it is certain that tithes, in their infancy, were given, not th the clergy aloae, but to lay monlss who were called paupers, and to other indigent perfons. Charles the Great was the firft fecular prince who acknowledged this right in the church. It appears to have been received with us, as far hack as David I.
2. The perfon employed by a eathedral church or monaflery, to ferve the cure in anf church annexed was called a vicar, becaure he held the church, no: in his nwn right, but in the right or avice of his amployers; and fo was removeable at pleafure, and had no hare of the benefice, otber than what they thought fit to allow $1: \mathrm{m}$ : bat, in the coure of time, the uppellation of vilar was limited to thofe who were made perpetual, and who got a ftated finare of the benefice for their incumbency; from whence arofe the difinction of benefices into parfonages snd vicarages.
3. Parfonage teinde are the teinds of corn ; and they are fo called becaufe they are due to the parion or other titular of the beasfice. Vicarage teinds are the fanall teincs of calves, lint, hemp, egys, ac. which were commonly given by the titular to the vicar who ferved the cure in his place. The frit fort was univerfally doe, unfefs in the cafe of their infendation to laies, or of a pon ifical exemption; but, by the cuftoms of almolt all Chrittendom, the liffer teinds were not demanded where they had not been in ufe to be paid. By the practice of Scotland, the teinds of animale, or of things produced from animals, as lainlis, wool, calves, are due though not accuftomed to be paid; but roots, herbs, Eic. are not tithable, unlefs ufe of payment be proved: neither are perfonal tcinds (i.e. the tenth of vhat one arcizes by his own induary) acknowledged by our law: yet they have been found due, when fup. ported by 40 years poffeftos.
4. The parfon who was intitled to the teind of corns, made his right effictual, either by accepting of a cer-
ta n number of teind-bolls yearly from the proprictor in fatisfation of it; or, mure frequently, by drawing or feparating upon the field his own tenth part of the corns, after they were ieaped, from the fluck or the remainity nine-tenths of the crop, and carrying it off to his swn granaries ; which is called dratun ? cin. 5. After the wormation, James VI. corfidered himafuf as propaictor of all the chateh-lands; partly becanfe the purpofes for which they had beco granted were declatid furen?itotu, zad parly, in unfquence of the refiguat can which he, and cucen ITary his mo. ther, had frecured from the ekneficiarizs: and cren as to the teinds, thourth our refurmed chergy alfo claimed then as the panimony of the chush, our fovercigu did not fubmit to that doctrime farther than extemided to a competert provition for minilers. He therefore erected or fecularifed feveral ahbacies and priories into remporal lordfrips; the egrantes of which were callid fumitimes lords of cration, and fome:imes thitlars, as having by their grants the fame tite to the crected benefices that the monafteries had iormerly.
6. As the crown's revenue fuffered greatly by thefe erections, the temporality of all church benenices (i.c. church lands) was, by 1587. c. 29. annexed to the crown. That flatute excepts from the annexation fuch benefices as were eitablifhed befure the reformation in ldymen, whofe righrs the legiflature had no intention to weaken. Notwithtanding this flatute, his majelty continued to make farther ereetions, which were declared null by 1592, c. 119. with an exception of fuch as had been made in favour of lords of parliament fince the general act of annexation in 158 .
7. King Charles 1 . foon after his fucceffion, raifed a reduction of all thefe erections, whether granted before or after the at of annexation, upon the grounds mentioned at length by Mr Forbes in his treatife of tithes, P. 259. At laft the whole matter was referred to the king himfelf by futur feveral fubmiflions or compromifes; in which the parties on one fide were the titulars and their tackfmen, the bifhops with the inferior clergy, and the royal boroughs, for the interelt they had in the teinds that were gifted for the provifion of minifters, fchools, or hofpitals within their boroughs; and, on the other part, the proprietors who wanted to have the leading of their own teinds. The fubmifion by the titulars contained a furrender into his mejely's hands of the fuperiorities of their feveral erestions.
8. Upon each of thefe fubmifions his najefty pronounced feparate decrees-arbitral, dated Sept. 2. 16.29, which are fuljoined to the acts of parliament of his reign. He made it lawful to proprietors to fue the titulars for a valuation, and if they thought fit fur a fale alfo, of their tuinds, hefore the commiffioners mamed or to be marid for that purpofe. The ate of icind, when it was polfflud by the proprietor jointly with the llock, for payment of a certain daty to the titular, and fodid not admit a feparate valuation, was fised at a fifth part of the contant yeariy rent, which was acecun ed a reafonable furrogatum, in place of a tenth of the increa?e. Where it was drawn by the titular, and confequently might be valued fuparately from the Pack, it was to be valued as its exient frould be aicertained upori a proof before the comunifioniers ; but in this latt valuation, the king directed the fifth part to be deculied from the proved teind, in favour of the proprietor,
which was therefore called the king's enfe. The proprietor finieg for a valuation gets the leading of his own teinds as foon as his fait commences, providing he does not allcw photeftation to be extricted againt him for not indifting.
9. Where the preprietor inflled allo for a fale of his teinch, the titular was volized to fell then at mine years purchafe of the valued teind-duty. If the purfuct has 1 a. tuck of his own tcinds, bot yet expired; or if the dccicher was only tackfinan of the teints, and fo could not give the phrfuce an licritable right; an abatement of the price was to be granted accordingly by the commifioners.
10. There is no provifion in the decrees-allitral, for felling the tcinls granted for the futtentation of miniRers, univelfities, \{chools, or hofpitals; becaufe thefe were to continue, as a perpetual fund, for the maintenance of the perfons or tecieties to whom they were apprepriated ; and chey are exprefly declared not fubject to fale, by $1690, c .30 .-1693, c .23$. By the lait of thefe acis, it is alfo provided, that the teinds belonging to bifhops, which had then fallea to the crown upon the abolifhing of epifcopacy, thonld not be fubject to fale as long as the $y$ remained with the crown not difpofed of; nor thofe which the proprizior, who had tight boch to flock and teind, referved to kimale in a fale or fou of the lands. But, though none of thefe teinds can be fold, they may be valued.
11. The king, by the decrees arbitral, declared his Kin the sight: own right in the fuperiorities of erection which had tiontities of been religned to him by the fubiniffion, referving tocrectiva. the titulars the feu duties thercof, until fayment by himfelf to them of 1000 metks Scots fur every chalder of feu-victual, and for each 100 merks of tiu duty; which right of redeeming the feu-duties was afterwards renounced by the crown. If the churchvaffal thould confent to hold his lands of the titular, lie cannot thereafter recur to the cluwn as his immediate fuperior.
12. In explaining what the conftant rent is by Rules for which the teind muft be valued, the fullowing rules fixing the are obferved. The rent drawn by the proprietor verluation of from the fale of fubjects, that are more properly parts teinds. of the land than of the fiuits, e.g. quarries, minerals, moffes, \&c. is to be deducted fiom the restal of the lands; and alfo the rent of fupernumera:y houfe, over and above what is neeeffary for agricuture ; and the additional rent that may be paid by the tetam, in confideration of the propriter's uncotaking any burden that law impofes wis the tenart, e. j. upholding the tenants houfes, becaufe tone of thit artictes ate paid properly on accome of the fruis. Oichards mult alfo be dicencted, and mill rent, tecaufe the profits of a mill arife from indatry; and the corns manufactured there fuffer a aluatio: as rent payable by the tenant, and therefore unght not to be valued a ficond sine againit the tituar as mill-rent. The geally expence of culture sught nut to be decuicted; for nut rent can be produced without it: bat, if an improveaknt of rent is made at an uacommon expence, c. $g$. by draining a lake, the proprictor is alluwed a reaionable abatement on that accouat.
13. Notuitaflanding the feveral n:ays of mifapply- Teinds reing ratuchial teinds in the times of Popery, fome few deerabic, bueficis remained entire in the hands of the parfons. \&c.

Law of Scotland.

The miniters planted in thefe, after the reformation, continued to have the full right to them, as proper beneficiaries: but a power was afterwards granted to the patron, to redeem the whole teind from fuch beneficiaries, upon their getting a competent Atipend modified to them; which teind fo redeemed, the patron is obliged to fell to the proprietor, at fix years purchafe.

1+. Some teinds are more directly fubject to an allocation for the minifler.s ftipend than others. The teinds in the hands of the lay titular fall fint to be allocated, who, fince he is not capable to ferve the cure in his own perfon, ought to provide one who can; and if the titular, in place of drawing the teind, has fet it in tack, the tack duty is allocated: this fort is called free teind. Where the tack-duty, which is the titular's intereft in the teinds, falls fhoit, the tack itfelf is burdened, ol, in other words, the furplus teind over and above the tack-duty: but, in this cafe, the commifioners are empowered to recompenfe the tackfman, by prorogating his tack for fuch a number of years as they fhall judge equitable. Where this likewife proves deficient, the allocation falls on the teinds heritably convejed by the titular, unlefs he has warranted his grant againtl future angmentations; in which cafe, the teinds of the lands belonging in property to the titular himfelf mull be allocated in the ifrtt place.
15. Where there is fufficiency of free teinds in a parifl, the citular may allocate any of them he fhall think fit for the miniter's llipend, fince they are all his own; unlefs there has been a previous decree of locality: and this holds. though the ftipend thould have been paid immemorially out of the teinds of certain particular lands. This right was fiequently abufed by titulars, who, as foon as a proprietor had brought an action of fale of his teinds, allocated the purfuer's full teind for the ftipend, whereby fuch action became ineffectual: it was therefore provided, that after citation in a falc of teinds, it thall not be in the titular's power to allocate the purfuer's teinds folely, but only in proportion with the other teinds in the parifh.

## Minifters

 glebes, \&c. exempted from teinds16. Minifters glebes are declared free from the payment of teind. Lands cum decimis inchufs are alfo exempted from tcind. But in order to exempt lands from payment of teind, it is neceflary that the proprictor prove his right thereto, cum decinis inclufis, as far back as the above act of annexation 1587 .
17. 'Ceinds are ielita fructuun, not fundi. The action therefore for bygone teinds is only perfonal, againt thofe who have intermeddled, unlefs where the titular is infeft in the lands, in fecurity of the valued teind duty. Where a tenant is, by his tack, hound Lo pay a joint duty to the landlord for flock and teind, withonit ditinguighing the rent of each, hin defence of a lona fide payment of the whole to the landlord has been fullained in a fuit at the inftance of a laic titular, but repelied where a churchman was purfuer. In both cafes the proprietor who receives fuch rent is liable as intermeddler.
18. In tacks of teinds, as of lands, there is place
for tacit relocation: to flop the effeet of which, the titular mutt obtain and execute an inhibition of teinds again! the tackfman; which differs much from inhibition of lands (explained under the next fection), and $N^{\circ} 177$.
is intended merely to interpel or inhibit the tackfman from farther intermeddling. This diligence of inhibition may alfo be ufed at the fuit of the titular, againft any other paffeflor of the teinds; and if the tackeman or pofferfor fhall intermeddle after the inhibition is executed, he is liable in a fpuilzie.
19. Lands and teinds pafs by different titles: a difpofition of lands, therefore, though granted by one who has alfo right to the teind, will not carry the teind, unlefs it thall appear from fecial circumflances that a fale of both was defigned by the parties. In lands cunn decinis inclufs, where the teinds are confolidated with the flock, the right of both muft necefla. rily go together in all cafes.

## Sect. XI. Of inbibitions.

The conflitution and tranfmiffion of feudal rights, and the burdens with which they are chargeable, being now explained, it remains to be confidered how thefe rights may be affected at the fuit of creditors by legal diligence. Diligences are certain forms of law, whereby a creditor endeavours to make good his payment, either by affecting the parfon of his debtor, or by lecuring the fubjects belonging to him from alienation, or by carrying the property of thefe fuhjects to himfelf. They are either real or perfonal. Real diligence is that which is proper to heritable or real rights; perfonal, is that by which the perfon of the debtor may be fecured, or his perfonal eftate affected. Of the fird fort we have two, viz. inbilition and adjudication.
2. Inbilition is a perfonal prohibition, which paffes Inhibiti by letters under the fignet, prohibiting the party inhibited to contract any debt, or do any deed, by which any part of his lands may be aliened or carricd off in prejudice of the creditor inhibiting. It muft be executed againil the debtor, perfonally, or at his dwell-ing-houfe, as fummonfes, and thereafter publifhed and regiftered in the fame manner with interdictions, (fee $\mathrm{N}^{\circ}$ clxxxiii. 21.)
3. Inlibition may proceed, either upon a liquid obligation, or even on an action commenced by a creditor for making good a claim not yet fuftained by the judge; which laft is called inbibition upon a depending adion. The fummons, which conftitutes the dependence, mull be executed againtt the debtor before the letters of inhibition pafs the fignet; for mo fuit can be faid to depend again? one till he be cited in it as a defender : but the effect of fuch inhibition is fufpended till decree be obtained in the action againft the debtor; and in the fame manner, inhibitions on conditional debts have no effcet till the condition be purified. Inhibitions are not granted, without a trial of the caufe, when they proceed on conditional debts. And though, in wther cates, inhihitions now pafs of courfe, the londs are in ufe to ftay, or recal them, either on the debtor's flowing caufe why the diligence fhould not procsed, or even ex officio where the ground of the diligence is doubtful
4. Though inhibitions, by their niform flyle, difable the debtor frum felling his moveable as well as his heritable eftate; their effect has been long limited to heritage, from the interruption that fuch an embargo upon moveables mut have given to commerce:
fo that debts contracted after inhibition may he the foundation of diligence againtt the debtor's perfon and moveable eftate. An inhibition fecures the inhibitor againf the alienation, not only of lands that belonged to his debtor when he was inhibited, but of thofe that he fhall afterwards acquire : but no inhihition can extend to fuch after-purchafes as lie in a jurifdiction where the inhibition was not regiflered; for it could not have extenied to thefe though they had been made prior to the inhihition.
5. This diligence only Arikes againt the voluntary debts or deeds of the inhibited perfon: it does not reflrain himi from granting neceffary deeds, i. e. fuch as he was obliged to grant anterior to the inhibition, fince he might have been compelled to grant thefe before the inhibitor had acquired any right by his diligence. By this rule, a wadfetter or annualrenter inight, after being inhibited, have effectually renounced his right to the reverfer on payment, becaufe taw could have compelled him to it; but to fecure inhibitors againft the effeet of fuch alienations, it is declared by act of federunt of the court of feffian, Feb. Ig. 1680, that, after intimation of the inhibition to the reverfer, no renunciation or grant of redemption fhall be fultained, except upon declarator of redemption brought by him, to which the inhibitor muft be made a party.
6. An inhibition is a diligence fimply prohibitory, y fo that the debt, on which it proceeds, contimues perfooal after the diligence; and confequently, the inhikitor, in a queftion with anterior creditors whofe debts are not Atuck at by the inhibition. is only preferable from the period at which his debt is made real by adjudication: and where debts are contracted on heritable fecurity, though pofterior to the inhibition, the inhibitor's debt, being perronat, cannot be ranked with them; he only draws back from the creditors ranked the fums contained in his diligence. The heir of the perfon inhibited is not reftrained from alienation by the diligence ufed againft bis anceflor ; for the prohibition is perfonal, affecting only the debtor agaiutt whom the ditigence is ufed.
7. Irhibitions do not, of themfelves, make void the pollerior debts or deeds of the perfon inhibited; they only afford a title to the ufer of the diligence to fet them afide, if he finds them lurtful to him: and even where a debt is actually reduced ex capite inhibitionis, fuch reduction, being founded folely in the inhibitor's intereft, is profitable to him alone, and cannot alter the natural preference of the other creditors.
8. Inhibitions may be reduced upon legal nullities, arifing cither from the ground of debt or the form of diligence. When payment is made by the debtor to the iuhibitor, the inhibition is faid to be purged. Any creditor, whofe debt is truck at by the iuhibition, may, upon making payment to the inhibitor, compel him to affign the debt and diligence in his favour, that he may make good his payment the more effectually againt the comiaon dibtor.

## Sect. XII. Of comprifings, adjudications, anả judicial jales.

Heritable rights may be carried from the debtor to the creditor, either by the diligence of apprifing (now adjudication), or by a judicial fale carried on be-
iang. fore the court of feffion. Apprifing, or comprifing,
was the fentence of a fheriff, or of a meffenger who was fpecially confituted fheriff for that purpofe, by which the heritable rights belonging to the debtor were fold for payment of the debt due to the apprifer; fo that apprifings were, by their original conllitution, proper fales of the debtor's lands to any purchater who offered. If no purchafer could be fornd, the fheriff was to apprife or tax the value of the lands by an inquert (whence came the name of apprifing), and to make over to the creditor lands to the value of the debr. A full hiltory of apprilings will be found in the beginning of Mr Erfine's large Infilute under this title; it being confidered as unneceffary to enter into a deduction now no longer neceffary, as by the act 1672 adjudications were fubtlituted in their place.
2. That creditors may have accefs to affect the eftate of their deceafed dehtor, though the heir flould Aand off from entering, it is made lawful (by 1540, c. 106.) fur any creditor to charge the heir of his debtor to enter to his ancettor (year and day being paft after the anceltor's death), within $4 c$ days after the charge; and if the heir fails, the creaitor may procced to apprife his debtor's lands, as if the heir had been entered. $\mathrm{C}_{13}$ ftom has fo explained this ftatute, that the creditor may charge the heir, irmmediately after the death of his ancettor, provided that the furnmon, which is to be founded on the charge be not raifed till after the expiry both of the year and of the 40 days next enfuing the year, within which the heir is charged to enter. But this tlatute relates only to fuch charges on which apprifing is to be led againft the anceftor's lands; for, in thofe which are to be barely the foundation of a common fummons or procefs againt the heir, action will be fuftained if the year be clapfed from the ancefor's death before the execution of the fummons, though the 40 days fhould not be alfo expired. Though the tatute authorifes fuch charges againtt majors only, practice has alfo extended it againtt minors, and the rule is extended to the cafe where the heir is the debtor. One mult, in this matter, dittinguilh between a general and a fpecial charge. A general charge ferves only to fix the reprefentation of the heir who is charged, fo as to make the debt his which was formerly his anceftor's: but a fpecial charge makes up for the want of a fervice ( $\mathrm{N}^{\mathrm{o}}$ clxxx. 25.) ; and flates the heir, fiftione juris. in the right of the fubjects to which he is charged to enter. Where, therefore, the heir is the debtor, a general charge for fixing the reprefentation againft him is unnecellary, fince the only concern of the creditor is, that his debtor make up titles to the anceftor's eftate, which is done by a fecial charge: but where the deceafed was the debtor, the creditor mult firt charge his heir to enter in general, that is may be known whether he is to reprefent the debtur: if he does not enter within forty dayo, the debt may be fixed againt him by a decree of contlitution; after which, the heritable rights belonging to the ancettor will fall to be artached; in doing which, the diligence to be ufed is different, according to the fate of the titles in the auceitor's perfon: for if the anceftor ftood vefted by infeftment, the heir mult be charged to erter heir in feecial; but if the ancellor had but a perronal right to the fubjects (i. e. not perfected by feifin), which would have been carried to the heir by a general fewice, then what is called a general fecial charge mult be given to the heir. Thefe charges, ei48 ther

Law of Scotland.
ther fpecial or general fpecial, as the circumilances of the cafe may require, are by the flatute 1540 made equivalent to the heir's actual entry; and therefore an adjudication led after the inducia of the charges are elapled, effectually carries to the creditor the fubjects to which the heir was charged to enter.
3. Apprifings in courfe of time underwent many changes in their form and eff- $\varepsilon$, till at length, by act 1672, c. 19. adjudications were fubiti:uted in their place, and are carried on by way of action before the court of feffion. By that flatute, fuch part of the debtor's lands is to he djundsed as is equivalent to the principal fum and intereft of the deht, with the compofition due to the fuperior and expences of infertment, and a fifth part mure in refpect the creditor ia c,bliged to take land for his money The debtor muft deliver to the creditor a $v$ ilid ripht of the lands to be ad judqed, or tranfumpts thereof, renounce the poffrfion in his favour, and ratify the dicree of adjudication: and law conliders the rent of the lands as precifely commenfurated to the interefl of the debt; fo that the adjudger lies under no obligation to aecount for the furplus rents. In thia, which is called a /pecial ad. juclication, the legal, or ime within which the debtor may redeem, is declared to be five years; and the creditor attaining poffeffion upon it can wite no father ex ecurion againitt the debtor, unlefs the lands be evieted from him.
4. Where the debtor does not produce a fufficient right to the lands, or is not willing to renonnce the poffeflion, and ratify the decree (which is the cafe that has moft frequently happened), the flatute makes it lawful for the creditor to adjudge all right belong. ing to the debtor in the fane manner, and under the fame reverfion of ten years, as he could, hy the former laws, have apprifed it. In this laft kind, which is called a general adjudication, the creditor mull limit his claim to the principal fum, interet, and penalty, without demanding a fifth part more. But no general adjudication can be infifted on, without libelling in the fummons the other alternative of a fpecial adjudication; for fpecial adjudications are introduced by the Ulatute in the place of apprifings; and it is only where the debtor refules to comply with the terms thereof, that the creditor can lead a general adjudication.
5. Abbreviates are ordained to be made of all adjudications, which mult be recorded within 60 days after the date of the decree. In every other refpect, general adjudications have the fame effects that apprifings had : adjudgers in poffefion are accountable for the furplus rents; a citation in adjudications renders the fubject litigious; fuperiors are obliged to enter adjudgers; the legal of anjudications does not expire during the debtor's minority, \&c. Only it may be obferved, that though apprifings conld not proceed before the tern of paynient, yet where the debtor is vergens ad inopian, the court ex nobili offcio admit adjudication for the debt before it be payable. But thas fort being found d folely in equity, fabfilts merely as a fecurity, and cannot carry the property to the credior by the lapfe of any length of time.
6. There are two kinds of adjudication, which took place at the fame time with apprifings, and lill obTwo kinds tain; viz. adjudications on a decree cogritionis caufa, of adjudica-otherwife called contra bereditatem jacentens; and adjusions dications in implenient. Where the debtor's apparent
heir, who is charged to enter, formally renounces the Law, fucceffion, the creditor may obrain a decree cognitionis Scotiand cauja; in which, though the heir renouncing is cited for the fake of form, no fentence condemnatory can be pronounced aganft him, in tefpect of his renunciation ; the only effect of it is to fuhject the bereditas jacons to the creditor's diligence.
7. Adjudications contra beredizatem juccutem, carry not only the lands themelves that belonged to the deceafed, but the rents thereof fallen due fince his death; for thefe, as an acceffory to the ettate belonging to the deceafed, would have defcended to the heir if he had entered, which rule is applied to all adjudications led on a feccial charge. This foft of adjudication is declared redeemable within feveo years, by any co-adjudging creditor, either of the deceafed debtor or of the heir renouncing. The heir himfelf, who renounces, cannet be reftored againft his renunciation, nor confequently redeem, if he be not a minor. But even a major may redeen indirectly, by granting a fimulate bond to a confident perfon; the adjudication upon wiich, when conveyed to himfelf, is a good tile to redeem all other adjucications againft the lands belung. ing to his anceftor.
8. Adjudications in implement are deduced againft thofe whio have granted deeds without procuratory of refignation or precept of feifin, and refufe to diveft themfelves; to the end that the fubject conveged may beeffectually velted in the grantee. Thefc adjudications may be alfo directed againli the hetr of the granter, upon a charge to enter. Here there is no place for a legal reverfion; for, as the adjudication is led for completing the right of a fpecial fubjict, it mult carry that fubject as irredeemably as if the right had been voluntarily completed.
9. All adjudications led within year and day of that one which has been made fift effectual by feifin (where feifin is ncceflary), or exact diligence for obtaining feilin, are preferable pari puffus. The year and day runs from the date of the adjudication, and not of the feifin or diligence, for obtaining it. After the days of that period, they are preferable according to their dates. All the co-adjudgers within the ycar are preferable pari pnfu, as if our adjudication had been led for all their debts. This makes the feifin or diligence on the firft adjudication a common right to the relt, who muft therefore refund to the owner of that diligence his whole expence laid out in carrying on and completing it. And though that firf adjudication fhould be redeemed, the diligence upori it titl fubfifts as to the reit. This pari paffe preference, however, does not deftroy the legal preference of adjudications led on debita fundi (fee N clxix. 15.) ; nor does it take place in adjuju cations in implement.

A niw fort of adjudication has becn lately introdu* ced into the law of Scotland by the act of the 23 d Geo. III. for rendering the payment of the creditors of infolvent debtors more equal and expeditious. Amon 5 the many other provifos in that flatute for expediting the payment of creditors, and leffening the expence of duigence againft the debtor's eftate, it is enacted, That upon an o-der from the court of feffion or lord ordinary, the bankrupt fhall be bound to execute a difpofition or difpofitions, making over to thetruftee or truftees chofen by the credrurs the whole. eftate real and gerfonal, wherever fituated; and in cafe
aw of the bankrupt's refufal, or of the order not being complied with from any other reafon, the court or the lord ordinary fhall, upon the application of the truftee, iffue an act or decree, adjudging the property of the whole fequeftrated eftate to be in the truftee for belnoof of the creditors: which fhall have the fane effect as if the bankrupt had executed the conveyance: and by a fubfequent claufe in the Itatute, it is enacted, that this difpofition of the heritable eflate, together with the order of the court or lord ordinary on which it proceeds, or, failing thereof, the decree of adjutication of the coutt or the lord oroinary, fhall within 60 days of the date thereof be regiftered in the regiter of abbreviates of adjudications; and fhall have the effect to inticle the trultee for behoof of the whole creditors to rank in the fame manner upon the heritable eftate as if it had been a proper decree of adjudication, obtained at the date of the interlocutor awarding the fequeftration ; accumulating the whole debts, principal and intereft, as at that period, and adjudging for fecurity or payment thereof, fo as to rank puri paflu with any prior effectual adjudication, and within year and day of the fame. By this ast alfo, in order to leffen the number of adjudications, and confequently the expence upon a bankrupt eftate, it is declared, that intimation fhall be made of the firtt adjudication which is called, fo as all creditors who are in readinefs may, within fuch a reafonable time as may be allowed, not exceed ing twenty federunt days, produce their grounds of debt, and be conjoined is the decree to follow on faid fult adjudication. At the fame time it may be proper to mention, that this act is only tempotary ; and after eight yeare experitnce, will probably fuffer very confideraile alterations, when it fha!l become neceffary to digelt anuther bankrupt law for Scotland.
ro. Befure treating of judicial fales of bankrupts efates, the nature of fequefration may be fhortly explained. which is a diligence that generally ufhers in actions of fale. Sequetration of lands is a judicial act of the court of fetrion, whereby the management of an eftate is put into the hands of a factor or fteward named by the court, who gives fecurity, and is to be accountable for the rents to aill having intereft. This diligence is competent, either where the right of the lands is doubrful, if it be applied for before either of the competitnrs has attained poffeflion, or where the eftate is heavily charged with debts: but, as it is an unfavourable diligence, it is not admitted, unlefs that meafure fhall appear neceffany for the fecurity of creditors. Subjects not brouglit before the court by the diligence of creditors, camot fall under fequetration; for it is the competition of creditors which alone founds the jurifdiaion of the court to take the difputed fubject into their poffeflion.
11. The court of feffion who decrees the fequeltrasion has the nomination of the factor, in which they are directed by the recommendation of the creditors. A factor appointed by the feffion, though the proprietor'had not been infett in the lands, has a power to remove tenants. Judicial factors muft, within fix months after extracting their factory, make up a rental of the eftate, and a lift of the arrears due by tenants, to be put into the hands of the clerk of the procefs, as a charge againit themfelves, and a note of fuch altera. tions in the rental as may afterwards happen; and mult
alfo deliver to the clerk annually a fefeme of their acconuts, charge and difchargc, under heary penaltics. They are, by the nature of their office, bound to the fame degree of diligence that a prudent man adhibits in his own affairs; they are accountable for the interelt of the rents, which they either have, or by diligence might have recovered, from a year after their falling due. As it is mach in the power of thofe factors to take advantage of the neceffities of creditors, br purchafing their debts at an undervalue, all fuch purchafes made either by the factor hiinfclf, or to his behoof, are declared equivalcrit to an acquittance or ex. tinction of the debt. No factor can warrantably pay to any creditor, witheut an order of the court of feffron; for he is, by the tenor of his commiffioa, directed to pay the rents to thofe who fhall be found to have the bett right to them. Judicial factors are intitled to a falary, which is generally flated at five per cent. of their intromiffions: but it is ieldomafcertained till their office expires, or till their accounting ; that the court may modify a greater or fmaller falary, or none, in proportion to the fuetor's integrity and diligence. Many cafes occur, where the court of feffi in, without fequeltration, name a factor to preferve the rents from perifhing ; c. g. where an heir is delberating whether to enter, where a miaor is without tutors, where a fucceflion opens to a perfon reffding abroad; in alt which cafes the factor is fubjected to the rules laid down in act of Cederunt, Feb. 13. 1730.

As to fequeftrations under the bankrupt ait before recited, the reader muft ueceffarily be referree to the act itfelf; for being ouly temporary, as before mentioned, it feems quite inconfiftent with the plan of this work to enter into a minute detail of the different regulations thereby laid down in cafes of fequeftration under it.
12. The word bankrupt is fometimes applied to per- Sate of fons whofe funds are not fufficient for their debts $s$ and bankrup: fometimes, not to the debtor, but to his effate. The eflates.' court of feffion are empowered, tt the fait of any real creditor, to try the value of a bankrupt's ctlate, and fell it for the payment of his debts.
13. No proceis of fale, at the fuir of a cretitor, can proceed without a proof of the debtor's bankntipty, or at leaft that his lands are fo charget with debrs that no prudent perfons will buy fron him ; and thererore the fummons of fale mult comprehend the debtor's whole cttate. The debtor, or lis apparent heir, and all the real creditors in poffeffion, mult be nade parties to the fuit ; but it is fufficient if the other creditors be called by an edictal citation. The fummons of fale contains a conclufion of ranking or preference of the baukrupt's creditors. In this ranking, firlt and fe-Ranking of cond verms are affigned to the whole creditors for exhi-creditozso biting in court (or producing) their rights and diligences; and the decree of certification procetding thereupon, againt the writings not produced, has the faine effeet in favour of the cieditors who have produced their rights, as if that decree had proceeded upon an action of reduction-improbation. S3e No clxxxiii. 3. By the late bankrupt act, the fale may precede the ranking of the creditors, unlefs the court, upon application of the creditors, or any of them, hall find fufficient canfe to delay the fale. The irredeemable property of the lands is adjudged by the court to the higheft of-

La区 のf Scotland.
-

Law of ferer at the fale. The creditors receiving payment Scotland. muft grant to the purchafer abfolute warrandice, to the extent of the finm received by them; and the lands purchafed are declared difburdened of all debts or deeds of the bankrupt, or his ancelitors, either on payment of the price by the purchafer to the creditors according to their preference, or on confignation of it. By the act 1695 , purchafers were bonnd to confign the price in - he hands of the magiffates of Edinburgh; but by $\$ 5$ of the above act, they may confign it in the royal bank or bank of Scotland. The only remedy provided to fuch creditors as judge themfelves hurt by the fale or divifion of the price, even though they thould be minors, is an action for recovering their thare of the price againt the creditors who have received it.
14. The expence of thefe procefles is deburfed by the factor out of the rents in his hands; by which the whole burden of fuch expence falls upon the pofterior creditors.
15. Apparent heirs are intitled to bring aetions of fale of the eflates belonging to their anceftors, whether bankrupt or not; the expence of which ought to fall upon the purfuer, if there is any excrefcence of the price, after payment of the creditore; but if there be no excrefcence, the creditors, who alone are gainers by the fale, ought to bear the charge of it.
16. As proceffes of ranking and fale are defigned for the common intereft of all the creditors, no diligence carried on or completed during their pendency ought to give any preference in the competition; pendente l..., nibil innovandum.
17. It is a rule in all real diligences, that where a creditor is preferable on feveral different fubjects, he cannot ufe his preference arbitrarily, by favouring one creditor more than another; but muft allocate his univerfal or catholic debt proportionally againt all the Subjects or partics whem it affects. If it is material to fuch creditor to draw his whole payment out of any one fund, he may apply his debt fo as may beft fecure himfelf: but that inequality will be rectified as to the pofterior creditors, who had likewife, by their rights and diligences, affected the fubjects ont of which he drew his payment, by obliging him to afign in their favour his right upon the feparate fubjects whict he did not ufe in the ranking; by which they may recur againt thefe feparate fubjects for the fhares which the debt preferred might have drawn out of them. As the obligation to affign is founded merely io equity, the catholic creditor cannot be compelled to it, if his affigning fhall weaken the preference of any feparate debt vefted in himfelf, affecting the fpecial fubject fought to the affinned. But if a creditor upon a fpecial fubject fhall acquire from another a catholic right, or a catholic creditor fhall purshafe a debt affecting a fpeciad fubject, with a view of creating to the fpecial debt a higher degree of preference than was naturally due to it, by an arbitrary application of the catholic debt, equity cannot protect him from affigning in favour of the creditor excluded by fuch application, efpecially if, prior to the purchafe, the fubject has become litigious by. the procefs of ranking.

## 11. MOVEABLERIGHTg.

The law of heritable rights being explained, Move-
alle Rights fall next to be confidered; the doctrine of Law of which depends chiefly on the nature of Obligations. Scotland

Sect. XIII. Of obligations and contrafts in ge- cixxiii. neral.

An obligation is a legal tie, by which one is bound Obligation to pay or perform fomething to another. Every obligation on the perfon obliged implies an oppofite right in the creditor, to that what is a burden in regard to the one is right with refpect to the other; aud all rights founded on obligation are called perfomal. There is this effential difference between a real and a perfonal right, that a jus in re, whether of property, or of an inferior kind, as fervitude, intitles the perion velled with it to poffefs the fubject as his own; or if he is not in pofleffion, to demand it from the poffeffors: whereas the creditor in a pertonal right has only jus ad rem, or a right to compel the oebtor to fulfil his obligation;without any right in the fubject it eelf, which the debtor is bound to transfer to him. One cannot oblige himfelf, but by a prefent act of the will. A bare relolution, therefore, or purpofe, to be obliged, is alterableat pleafure.
2. Obligations are either, ( 1. ) Merely natural, where Divifion one petfon is bound to another by the law of nature, obligatige but cannot be compelled by any civilaction to the performance. Thus, though deeds granted by a minor having curators, without their confent, are null, yet the minor is naturally obliged to perform fuch deeds; and parents are naturally obliged to provide their children in reafonable patrimonies. Natural obligations intitle the creditor to retain what he has got in virtue thereof, without being fubjected to reftore it. (2.) Obligations are merely civil, which may be fued upon by an action, but are elided by an exception in equity; this is the cafe of ubligations granted through furce or fear, \&\%c. (3.) Proper or full obligations, are thofe which are fupported both by equity and the civil fanction.
3. Obligations may be alfo divided into, (1.) Pure, to which neither day nor condition is adjected. Thefe may be exacted immediately. (2.) Obligations (ex dit), which have a day adjected to their performance. In thefe, dies fatim cedit, fed non verit; a proper debt arifes from the date of the obligation, becaufe it is ccrtain that the day will exift ; but the execution is fufpended till the lapfe of that day. (3.) Conditiona! obligations ; in which there is no proper debt (dies noz cedii) till the condition be purified, becaufe it is posfible the condition may never exitt; and which therefore are faid to create only the hope of a debt; but the granter, even of thefe, has no right to refile. An obligation, to which a day is adjected that poffibly may never exilt, implies a condition; dies incertus pro conr ditione babetur. Thus, in the cafe of a provilion to a child, payable when he attains to the age of fourteer, if the child dies before that age, the provifion falls.
4. Obligations, when confidered with regard to their caule, were divided by the Romans, into thofe arifing from contract, quafi contract, delict, and quafi delict: but there are certain obligations, eveo full and proper ones, which cannor be derived from any of thefe fources and to which Lord Stair gives the name of obedientiat: Such as the obligation on parents to aliment or maintaip their children; which arifes fiagly from the relae tion
aw of tion of parent and child, and may be enforced by the civil magittrate. Under parents are comprehended, the mother, grandfather, and grandmother, in their proper order. This obligation on parents extends to the providing of their iffue in all the neceflaries of life, and giving them fuitable education. It ceafes, when the children can earn a livelihood by their own induftry; but the obligation on parents to maintain their indigent children, and reciprocally on chaildren to maintain their indigent parents, is perpetual. This obligation is, on the father's death, transferred to the eldelt fon, the heir of the family; who, as reprefenting the father, mult alinent his younger brothers and filters: the brothers are only intitled to alimony, till their age of twen-ty-one, after which they are prefumed able to do for themfelves; but the obligation to maintain the fifters continues till their marriage. In perfons of lower rank, the obligation to aliment the fifters ceafes after they are capable of fubfifting by any fervice or employment.
5. All obligations, arifing from the natural duty of reflitution, fall under this clafs; thus, things given upon the view of a certain event, mult be reftored, if that event does not afterwards exitt : thus alio, things given ob turpem caufan, where the turpitude is in the receiver and not in the giver, mult be reftored. And on the fame principie, one upon whofe ground a houfe is built or repaired by another, is obliged, without any covenant, to reflore the expence laid out upon it, in fo far as it has been profitable to him.
traps. 6. A contract is the voluntary agreement of two or more perfons, whereby fomething is to be given or performed upon one part, for a valuable conflideration, either prefent or future, on the other part. Confent, which is implied in agreement, is excluded, (1.) By error in the effentials of the contract; far, in fuch cafe, the party does not properly contract, but errs or is deceived; and this may be alfo applied to contracts which take their rife from fraud or impofition. (2.) Confent is excluded by fuch a degree of reftraint upon any of the contracting parties, as extorts the agree. ment; for where violence or threatening are ufed againil a perfon, his will has really no part in the contract.
7. Loan, or mutuum, is that contract which obliges a perfon, who has borrowed any fungible fubject from another, to reflore to him as much of the fame kind, and of equal goodnefs. Whatever receives its elfimation in number, weight, or meafure, is a fungible; as corn, wine, current coin, \&c. The only proper fubjeets of this contract are things which cannot be uled without either their extinction or alienation: hence the property of the thing lent is neceffarily transferred by delivery to the borrower, who confequently mult run all the hazards either of its deterioration or its perilhing, according to the rule, res perit fuo domino. Where the borrower neglects to relture at the time and place agreed on, the eflimation of the thing lent muft be made according to its price at that time and in that place; becaufe it would have been worth fo much to the lender, if the obligation had been duly perform. ed. If there is no place nor time flipulated for, the value is to be flated according to the price that the commodity gave when and where it was demanded. In the loan of money, the value put on it by public authority, and not its intrinfic worth, is to be confidered.
A. WV.

This contract is one of thofe called by the Romans unilateral, heing obligatory onls on one part; for the lender is fubjected to no obligation : the only action therefore that it produces, is pointed againft the borrower, that he may reftore as much in quantity and quality as he borrowed, together with the damage the lender may have fuffered through default of due perfurmance.
8. Commodate is a fpecies of loan, gratuitous on the commom part of the lender, where the thing lent may be ufed, dase. without either its perihing or its alienation. Hence, in this fort of loan, the property continues with the lender: the only right the borrower acquires in the fubject is its ufe, after which he mult reitore the individual thing that he borrowed: confequently, if the fubject perimes, it perifhes to the lender, unlefs it has perillhed by the borrower's fault. What degree of fault or negligence makes either of the contracting parties liable to the other in damages, is comprehended under the following rules. Where the contract gives a mutual benefit to both parties, each contractor is bound to adhibit a middle fort of diligence, fuch as a man of ordinary prudence ufes in his alfairs. Where only one of the parties has benefit by the contract, that party muft ufe exact diligence; and the other who has no advantage by it, is accountable only for dole, or fur grofs omiffions, which the law conitrues to be dole. Where one employs lefs care on the fubject of any contract which implies an exuberant truft, than he is known to employ iń his own affairs, it is conlidered as dole.
9. Hence it will appear that this is a bilateral con. tract ; the Lorrowcr mutt be exactly careful of the. thing lent, and reftore it at the time fixed by the contract, or after that ufe is made of it for which it was: lent: if he puts it to any other ufe, or neglects to reo. ftore it at the time coveranted, and if the thing perihes thercafter, even by mere accident, he is bound to pay the value. On the other part, the lender is. obliged to reltore to the borrower fuch of the expencesdeburfed by him on that fubject as arofe from any uucommon accident, but not thofe that naturally attend the ufe of it. Where a thing is lent gratuitoufly, without ${ }^{\text {pecifying }}$ any time of redelivery, it conltitutes the contract of precarium, which is revocable at the lender's pleafure, and, bcing entered into from a perfonal regard to the burrower, ceafes by his death.
10. Depolitation is alfo a bilateral contract, by which Depnfitio one who las the cullody of a thing committed to him tionn (the depolitary) is obinged to relture it to the depolitor. If a reward is bargained for by the depofitary for his care, it refolves into the contract of location. As this contract is gratuitous, the depolitary is only anfiverable for the confequences of grofs negleet; but after the depofit is redemanded, he is accountable even for cafual misfortures. He is intitled to a full indernnification for the luffes he has fultained by the contract, and to the recovery of all fums expended by hiim on the fubject.
11. An obligation arifes without formal paction, Nate, cat: barely by a traveller's entering into an inu, ilhup, or pones, fichere itable, and there depolizing his goods, or putting up aprarii. his harfes; whereb; the innkeeper, thipuaiter, or thaibler, is accountable, not only for his own facts and thofe of his fervants (whicb is an obligation implied in the very exercife of thefe employments), but of the other guefts or pafiengers; and, indeed, in every cafe, unleis
where the goods have been loft damno fatali, or carried off by pirates or houfe-breakers. Nut only the matters of Mips, but their employers, are liable each of them for the fhare that he has in the fhip; but by the pre fent cullom of trading nations, the goods breught into a thip muft have been delivered to the mather or mate, or entered into the lhip-books. Carriers fall within the intendment of :his law; and praktice has extended it to vintners within borough. The extent of the damage fu? ained by the party may be proved by his own oath in lisem.
12. Sequeftration, whether voluntarily confeated to
suqueftraciou.

Confignacion. by the paties, or authoriled by the judge, is a kind of depufit; hut as the office of fequeltree, to whofe care the fubject in difpute is conmitted, is not confidered as gratuious, he cannot thow it up at pleafure, as a common depofitary may do; and he is liable in the middle degree of diligence. Conlignation of money is allo a depolit. It may be made, cither where the debt is called in quetion by the debtor, as in furpenfons; or where the creditor refules to receive his money, as in wadfets, \&e. The rific of the configned money lies on the configner, where he ought to have made payment, and not confignation ; or has configned only a part; or has chofen for confignatory, a perfon neither named by the parties nor of good credit. 'The charger, or other creditor, runs the rik, if he has charged for fums not due, or has without good reafon refufed payment, by which refufal the confygnation beearne neceffary. It is the office of a conlignatory, to keep the money in fafe cuftody till it he called for: if therefore he puts it out at interelt, he mult run the hazard of the debtor's infolvency; but, for the fame reafon, though he fhould draw intereft for it, he is liable in none to the conligner.
Pledge.
13. Pledge, when oppofed to wadfet, is a contract, by which a debtor puts into the hands of his creditor a fpecial moveatle fubject in recurity of the debt, to be redelivered on payment. Where a fecurity is eflablifhed by law to the creditor, upon a fuljeet which continues in the debtor's poffeffion, it has the fpecial name Uypo:hec. of an hypothec. Tradefmen and nip carpenters have an hypothee on the houfe or flip repaired, for the materials and other charges of reparation ; but not for the experce of building a new firip. This, hawever, mut not now be undertood to apply univerfilly; for the court of feffion, in different cafes which lately occurred before them, and founding upon the law and practice of England in fimilar cafes, have found, that no hypothec exilts for the expence of repairs done in a bome port. Owners of Mips have an hypothec on the cargo for the freight ; heritors on the fruits of the ground; and landlords on the invecta et illata, for their rents. Writers alfo, and agents, have a right of hypothee, or more properly of retention, in their conftituent's writings, for their claim of pains and deburfements. A creditor cannot, for his own payment, lell the fubject impignorated, without applying to the judge-ordinary for a warrant to put it up to public fale or roup; and to this application the debtor uught to be made a party.
clxsiv.
Verbal
agreement.

Sect. XIV. Of Obligations by word or writ.
The appellation of verlal may be applied to all
obligations to the conftitution of which writing is not effential, which includes both real and confenfual con. tracts; but as thefe are explained under teparate titles, ubligations by word, in the fenfe of this rubric, mult be reflricied, either to promifes, or to fuch verbal agreements as have no fpecial name to diltinguifh them. Ayreement implies, the intervention of two different parties, who come under mutual obligations to one another. Where nothing is u be given or performed but on one part, it is properly called a promife; which. as it is gratuitous, does not require the acceptance of him to whom the promife is made. An offer, which mult be diltinguilhed from a promife, implies fomething to be done by the other party; aid confequently is not binding on the olferer, till it be accepted, with its limitations or conditions, by him to whom the uffer is made; after which, it becomes a pruper agreement.
2. Writing mult neceffarily intervene in all obliga- Writing tions and bargains concerning heritable fubjects, tho' they fhould be only temporary; as tacks, which, when they are verbal, laft but for one year. In thefe, no verbal agreement is binding, though it fhould be referled to the oath of the party; for, till writing is adhibited, law gives both parties a right to refile, as from an untinifhed bargain; which is called locus panitentic. lf, upon a verbal bargain of lands, part of the price fhal be paid by him who was to purchafe, the inter. ventus rei, the actual payment of money, creates a valid ohligation, and gives a beginning to the contract of fale : and, in generul, where ever inatters are no longer entire, the right to refile feems to be exeluded. An agreement, whereby a real right is paffed from, or reltricted, called pacium! liberatorium, may be perfected verbally; for freedom is favourable, and the purpofe of fuch agreement is rather to diffolve than to create an obligation. Writing is allo cffential to bargains made uuder condition that they thall be reduced into writing; for in fuch cales, it is pars contraclus, that, till writing be adhibited, both parties fhall have liberty to withdraw. In the fame manner, verbal or muncupative teflaments are rejected by our law ; but verballegacies are fullained, where they do not exceed L. 100 Scots.
3. Anciently, when writing was little ufed, deeds iolemniti were executed by the party, appending his feal to them of writee in prefence of witneffes. For preventing frauds that obligation might happen by appending feals tu falfe deeds, the Subfeription alfo of the granter was afterwards required, and, if he could not write, that of a norary. As it might be of dangerous confequences to give full force to the fubfeription of the parties by initials, which is more eafily counterfeited; our practice, in order to fuftain fuch fubfeription, feems to require a proof, not ouly that the granter ufed to fubferibe in that way, but that de falo he had fubferibed the deed in quettion; at leaft, fuch proof is required, if the inftrumentary witnefles be ftill alive.
4. As a further check, it was afterwards provided, that all writings carrying any heritable right, and o ther deeds of importance, be fibferibed tay the principal parties, if they can fubferibe; otherwife, by two notaries, before four witneifes fpecially defigned. The fubfequent practice extended this requifite of the defignation of the witneffes to the cafe where the parties thenfelves fubicribed. Cuitum has conftrued obligations for
$\qquad$

ax of fums exceeding L. 100 Scots, to be obligations of importance. In a divifible obligation, ex: gr. for a fum of moncy, though exceeding L. 100, the fublcription of one notary is fufficient, if the creditor rellrifis his claim to I 100: But in an obligation indivifible, e.g. for the performance of a fact, if it be not fubfrib:d in rerms of the flatute, it is void When notaries thus atieft a deed, the atteftation or docquet mull fpecially exprefs that the granter gave them a mandate io fign ; nor is it fufficient that this be mentioned in the body of the writing.
5. In every deed, the name of him who writes it, with his dwellitg. place, or other mark of diftiscrion, mult be inferted. The witneffen mult both fubicribe as witneffes, and their names and defignations be inferted in the body of the deed: And all fubicribing witneffes mult know the granter, and either fee him fubfcribe, or hear him acknowledge his fubfeription; ctherwife they are icclated punifhable as accefiary to forgery. Deeds, decrees, and other fecurities, confilting of more than one fheet, may be written by way of book, in place of the former cuftom of palting together the feveral theers, and figning the joinings on the margin ; provided each page be ligned by the granter, and marked by its number, and the tefting clanfe exprefs the number of pages.
6. Inflruments of feifin are valid, if fubferibed by minitiee wrial one notary, before a reafonable number of witnedies; uments which is extended by practice to inftruments of refignation. Two witneffes are deemed a realonable number to every deed that can be executed by one notary. It is not neceffary that the witneffes to a notorial inftrument orexecution fee the notary or meffenger fign; for they are called as witneffes to the tranfaction which is attelted, and not to the fubfoription of the porfon attefting.
7. A new requifite has been added to certain deeds fince the union, for the benefit of the revenue: They mult be executed on flaniped paper, er parcliment, paying a certain duty to the crown Thefe duties muft all be paid before wrote upon, under a penalty; but they are fo numerous and complex, that it would be tedions, even if it fell under our pian, to enter into an enumeration of chem. They will be fonnd at langth in Swinton's Abridgement, roce Stamps, to which the rtader is referred. Certain judicial dteds, fuch as bail-bouds. honds of cautionry, in fufpenfions, \&c. are excepted, and do not require famps, as will be fuen from the feveral acts referred to by the com. piler of the above abridgement of the ttatutes.
8. The granter's name and defignation are effential, not properly as folemtities, but becaufe no writing can have effect withuut them Bunds were, by our an. cient practice, frequently cxecuted without filling up the creditor's rame; and they paffid trom hand to hand, like notes payable to the bearer: But as there was no method for the cieditor of a perfon puffiffed of thefe to focure them for his payment, all writings taken blank in the creditor's name are declared null, as covers to fraud; with the cxception of indorfations of bills of exchange.
y. Certain privileged writings do not require the ordinary folemnities. 1. Holograph deeds (written by the granter himiclf) are effectual without witneffes. The date of no holograph writing, ticept a bill of ex.
change (fee next parag.), can be proved by the granter's own alfertion, in prejudice either of his heir or his crecitors, but mult be fupported by other adminicles. 2. Telta:nents, if exceuted where men of akill and bufinefy cannot be had, are valid though they thould not be quite formal: and let the fubject of a teltament be ever fo valuable, one notary ligning lor the tettator, betore two witneffes, is in practice 1ullicient. Clergymen were ficquently notaices before the reformation; and, th ught they were atterwatds prohibited to act as nutaries, the cale of tellaments is excepted; fo that thicle are tupposted by the atteltation of one minifter, with two witneffes. 3. Dilcharges to tenants are fuftablace withoutwinelies, from thicir prefiomed rulticity, or ignoralice in butinets. 4. Malfive letcers in re mercatoria, commafliuns, and ntted accounts in the courfe of trade, and bill or exenange, though they are not holugraph, are, trom tie tavour of comnerce, tuitained wathuut the ordanary fulemintes.
10. A bill of exchange is an obligation in the form Bille ofero of a mandate, wherely the drawer or mandant defireb change. him to whom it is dirceted, to pay a certan fum, at the day and place therein mentioned, to a thard parts. Bill of excliarige are urawn by a perfon in one country to his correlpundent in another; and they have that name, becauie it is the exchange, or the value of noney in one place curnpared with its value in another, tnat generality detcrmates the precife extent of the fum contaned in the draught. The creditor in the bill is fonettimes cailed the poffefior, oi portazr. As parties to bills ane of aificrent countries, queitions concening them ought to be uetermuto by the received cuitoni of trading nations, unkets where fipecial itatute anterpofes. Fas this realun, bills of eachange, though there form adants not of witnelles, yet prove their own dates, in quations earber with the heir or credutors of the aebtur; but this ductrine is not extended to inland bills pasable to the draver himielf.
11. A bill is valid, witiout the defignation either Their boo of the drawer or of the perion to whom it is made lenantiospayable: Is is cnough, that the drawer's lubieription and oblis. appears to be cruiy his; ano one's bering polletior of a jationsso bill marks him wut to be the creditor, if he bears the namic g.sen in the bill to the creditor: Nay, though the perivn drawn on ihould not be detigned, his aeceptance prefumes that is was he whom the drawer had in his eye. Bills drawn blank, in the creditor's name, fall nader the Alatutory nulhry; for though madorfations of bills are excepted irom it, bilis themulves are not. Not only the perfiun drawn upon mutt lign his acceptance, but the drawer mutt hign his uraught, befure any ubligatiun can be formed againh the aceepter: Yet it is fufficient in-practice, that the drawer ligns before the bill be produced in judgenent; though itithould be after the death both of the creditor and accepter. A creditor in a ball may tranlmit it to another by indorfation, though the bill thould not bear to bis order; by the lame rule that other riglits are tranfunlîble by affignation, though they do not bear to a/fignecs.
12. The drawer, by figning his draugat, becomes liable for the value to the credtor in the bill, in cafe the perfon drawn upon either dots not accept, or after acceptance does not pay ; tor he is prefumed to have received value from the creditor at gring than the draught, though it fhould not bear for value revieived: But, if
the drawer was debtor to the ereditor in the bill before the draught, the bill is prefumed to be given towards payment of the debt, unlefs it exprefsly bears for value. The perfon drawn upon, if he refufe to accept, while I'e has the drawer's money in his hands, is liable to him in damages. As a bill prefumes valuc from the creditor, indorfation prefumes value from the indorfee; who therefore, if he cannot obtain payment from the accepter, has recourfe againft the indorfer, unlefs the bill be indorfed in thefe words, without recourve.
13. Payment of a bill, by the accepter, acquits both the drawer and him at the hands of the creditor: but it intitles the accepter, if he xas not the drawer's debtor, to an action of recourfe againft him; and, if he was, to a ground of compenfation. Where the bill does not bear value in the hands of the perfon drawn upon, it is prefumed that he is not the drawer's debtor, and confequently he has recourfe againft the drawer, ex mandato.
14. Bills, when indorfed, are confidered as fo many bags of money delivered to the onerous indorfee; which therefore carry right to the contents, free of all burdens that do not appear on the bills themfelves. Hence, a receipt or difcharge, by the original creditor, if granted on a feparate paper, does not exempt the accepter from fecond payment to the indorfee; hence, alfo, no ground of compenfation competent to the accepter againt the original creditor can be pleaded againit the indorfee: but, if the debtor flall prove, by the oath of the indorfee, either that the bill is indorfed to him for the indorfer's own behoof, or that he paid not the full value for the indorfation, the indorfee is jutt!y con-- fidered as but a name; and therefore all exceptions, receivable againft the original creditor, will be fultain. ed againtt him. A protefted bill, after regiftration, cannot be tranfmitted by indorfation, but by affignation.
15. Bills muf be negociated by the poffeffor, againt the perfon drawn upon, within a precife time, in order to preferve recourle againft the drawer. In bills payable fo many days after fight, the creditor has a dif. cretionary power of fixing the payment fomewhat fooner or later, as his occafions thall require. Bills payable on a day certain, need not be prefented for acceptance till the day of payment, hecaufe that day can neither be prolonged nor fhortened by the time of acceptance. For the fame reafon, the acceptance of bills, payable on a precife day, need not be dated : but, where a bill is drawn payable fo many days after light, it mull ; becaufe there tbe term of payment depends on the date of acceprance.
16. Though bills are, in flrict law, due the very day on which they are made payable, and may therefore be proteited on the day thereafter; yet there are three days immediately following the day of payment, called days of grace, within any of which the creditor may protelt the bill : but if he delay protelting till the day after the laft day of grace, he lofes his recourfe. Where a bill is protelted, either for not acceptance or not payment, the difhonour muft be notified to the drawer or indorfer, within three pofts at fartheft. This itrictutis of tiegociation is confined to fuch bills as may be protefted by the poffeffor upon the thiro day of grace: where, thercfore, bills are indorled after the days of $\mathrm{N}^{0} 1 \%$.
grace are expired, the indorfee is left more at liberty; and does not lofe his recourfe, tho' he fhould not take a formal protell for not payment, if, within a reafenable time, he fhall give the indorfer notice of the accepter's refufing to pay. Not only does the poffeflor, who ne, glects Atrict negociation, lofe bis recourfe againtt the drawer, where the perfon drawn upon becomes afterwards bankrupt ; but tho' he fhould concinue folvent : for be may in that cafe recover payment from the debtor, and fo is not to be indulged in an unneceffay procefs againit the drawer, which he has tacitly renounced by his negligence. Recourfe is preferved againft the drawer, though the bill fhould not be duly negociated, if the perfon drawn upon was not his debtor; for there the drawer can qualify no prejudice by the neglect of diligence, and he ouglit not to have drawn on one who owed him nothing.
17. The privileges fuperadded to bills by itatute are, Privilege that though, by their form, they can have no claufe of of bills b regiltration, $y \in t$, if duly protefted, they are regillrable fatute. within fix months after their date in cafe of not accep: tance, or in. fix months after the term of payment in the cafe of not payment; which regiftration is made the foundation of fummary diligence, either againt the drawer or indorfer in the cafe of not acceptance, or againtt the accepter in the cafe of not payment. This is extended to inland bills, i. e. bills both drawn and Inland bi made payable in Scotland. After acceptance, fummary diligence lies arainft no other than the accepter; the drawer and indorfer mult be purfued by an ordi. nary action. It is only the prineipal fum in the bill, and interett, that can be charged for fummarily: the exchange, when it is not included in the draught, the re-exchange incurred by fuffering the bill to be protefted and returned, and the expence of diligence, malt all be recovered by an ordinary action; becaufe thefe are not liquid debts, and fo mult be previoufly conitituted.
18. Bills, when drawn payable at any confiderable diftance of time after date, are denied the privileges of bills; for bills are intended for currency, and not on hills not lie as a fecurity in the creditor's hands. Bills are not valid which appear ex facie to be donations. No extrinfic ilipulation ought to be contained in a bill which deviates from the proper nature of bills : hence, a bill to which a penalty is adjected, or with a claufe of intereit from the date, is null. Inland precepts drawn, not for money the medium of trade, but for fungibles, are null, as wanting writer's name and witneffes. It is not an agreed point whether promiffory notes, without writer and witucffis, unlefs hulograph, are probative.
19. So food the law of Scotland, in regard to bills and Late alt promiffory notes, previous to the ilatute 12 Geo. III. ations as By that llatute, however, the law of Scotland has bills and undergone very matcrial alterations. They are de-proniffo clared to have the fame privileges, and to prefcribe in fix years after the term of payment. Bank notes and polt bills are excepted from this prefcription : nor dues it run during the years of the creditor's minority Inland bills and promiffory notes mult be proteited with. in the days of grace, to fecure recourfe; and the difhonour notified within 14 days after the prote!t. Summary diligence may pafi not only againl the acceptor, but likewife againtt the diawer, and all the indorfees jointly and feverally; and at the inltance of any in-
dorfee,
dorfee, thongh the bill was not protefted in his name, upon his producing a receipt or letter from the protefting indorfee. This att was in force only for feven years after 15th May 1772, and to the end of the then next feffion of parliament. But as it was found by experience, that it had been of great advantage to Scotland, it was made perpetual by the late ack 23 Gco. III. Co that it has now become a permanent part of the law of Scotland.
20. As for the folemnities effential to deeds figned in a foreign country, when they come to receive exe. cution in Scotland, it is a general rule, that no laws can be of authority beyond the dominions of the lawiss giver. Hence, in flrictnefs, no deed, though perfected according to the law of the place where it is figned, can lave effect in another country where different folemnities are required to a deed of that fort. But this rigour is fo foftened ex camitate, by the common confent of nations, that all perfonal obligations granted according to the law of that country where they are figned, are effectual every where; which obtains in obligations to convey heritage. Conveyances themfelves, however, of heritable fubjects, muft be perfected according to the law of the country where the heritage lies, and from which it cannot be removed.
21. A writing, while the granter keeps it under his si- own power or his doer's, has no force ; it becomes obligatory, only after it is delivered to the grantee himfelf, or found in the hands of a third perfon. As to which laft, the following rules are obferved. A deed found in the hands of one who is doer both for the granter and grantee, is prefimed to have been put in his hands as doer for the grantee. I'he prefumption is alfo for delivery, if the deed appeare in the hands of one who is a flranger to both. Where a deed is depofited in the hands of a third perfon, the terma of depofitation may be proved by the oath of the depofitary, unlefs where they are reduced into writing. A deed appearing in the cuftody of the grantee himfelf, is confidered as his abfolute right ; in fo much that the granter is not allowed to prove that is was granted in truft, otherwife than by a written declaration figned by the truftee, or by his oath.
aceds 22. The following deeds are effectual without delivery. (1.) Writings containing a claufe difpenfing de- with the delivery; thefe are of the nature of revocable deeds, where the death of the granter is equivalent to delivery, becaufe after death there can be no revocation. (2.) Deeds in favonr of children, even natural onea; for parents are the proper cuftodiars or keepers of cheir childsens writings. From a fimilar reafons poftnuptial fettlements by the loufoand to the wife ueed no delivery. (3.) Rights which are not to take eflect till the grantes's dath, or even whare he referves an inte. reft to himfelf during his life; for it is prefumed be holds the cuitody of thefe, mertly to fecure to himfelf fuch referved intereft. (4.) Deeds which the granter lay under an anticedent natural obligation to ezecute, $c$. $g$. rights granted to a cantioner for his relief. (5.) Mutual oblization:, e. g. contracts; for every 〔uc! deed, the inoment it is executed, is a common evident to all the partits contractors. Laftly, the publication of a tariting lay regiftration, is equivalent to delivery.

Vas. IX. Part II,

Contracts confenfual, (i.e. which might, by the Roman law, be perfected by fole confent, without the intervention eithcr of things or of writing,) are fale, permutution, location, focicty, and mandute. Where the fubject of any of thefe contracts is beritable, writing is neceffary.
2. Sale is a contract, by which one becomes obliged sale. to give fomething to another, in confideration of a certain price in current money to be paid for it. Things confilting merely in hope, may be the fubject of this contract, as the draught of a net. Commodities, where their importation or afe is abfolutely prohibited, cannot be the fubject of fale; and even in run goods, no action lies againtt the vender for not delivery, if the buyer knew the goods were run. So far indeed has this principle been carried, and fo anxious have our judges been to put a flop to the practice of fmuggling, that in different cafes which have occurred of action being brought at the inftance of a foreign merchant againt perfons refident in Scotland for paymert of goods which had been fmuggled, a dittinction has been made betwixt the cafe of the foreign merchant being or not being a native of Scotland. Where the foreign merchant was a native of Scotland, it has been prefumed that he was acquainted with the revenue law of the country, and that he was in a manner verfans in re illicita; and therefore action has been denied for recovery of the price of fuch goods: b:t where, on the other hand, the fureign merchant was not a native of Scotland, no ways amerable to, and even prefumed ignorant of, its laws, he has with juftice been allowed action for the price of fuch goods, unlefs it were fhown that he had in fact been particeps criminis, by aiding the fmuggle. The fame principle has regulated the decifions is the courts of Eugland in eafes of a fin milar nature, which have within thefe few years come before them.
3. Though this contract may be perfected before delivery of the fubject, the property remains till then with the vender: (See $\mathrm{N}^{3}$ clxii. 9.). Yet till delivery, the hazaid of its deterioration falls on the purchafer, becaufe he has all the profits arifing from it after the fale. On the oller hand, the fubject itfelf perifhes to the vender ; (1.) If it thould perifh through his fault, or after his undue delay to deliver it. (2.) If a fub. ject is fold as a fungible, and not as an incividual, or corpus, c. g. a quantity of farm wheat, fold withour diltinguifting the parcel to be delivered from rhe ref of the farm. (3:) The poriculum lics on the vender till delivery, if he be obliged by a [pecial article in the contract to deliver the fubject at a certain place.
4. Location is that contrage where an hire is Aipu- Location. lated for the ufe of things, or for the fervice of perfons. He who lets his work or the ufe of his property to hire, is the locator or leffor; and the other, the conduftor or leffec. In the location of things, the leffor is obliged to deliver the fubjeet, fitted to the ufe it was let for; and the leffee muff preferve it carefully, put it to no otier ufe, and, after that is over, teltore it. Where a workman or artificer lets his labour, and if the work iseitlier not performed according to contract,

Law of Scolland. elxxv. enxvo.
conferfial contrace.

Law of seculand.
or if it be infufficient, even from mere unfkilfuluef, he is liable to his employer in damages; for he ought not, as an artificer, to bave undertaken a work to which he was not equal. A fervant hired for a certain term, is jatitled to his full wages, though from ficknefs or other accident he fhould be difabled for a part of his time; But if he die before the term, his wages are only due for the time he actually ferved. If a matter dies, or without good reafon turns off, before the term, a fervant who eats in his houfe, the fersant is intitled to his full wages, and to his maintenance till that term : and, on the other part, a fervant who without ground deferts his fervice, forfeits his wages and maintenance, and is liable to his matter in damages.
5. Socity or copartner/bip is a contract, whereby the feveral partners agree concerning the communication of lofs and gain arifing from the fubject of the contract. It is formed by the reciprocal choice which the partncrs make one of another; and fo is not conlituted in the cafe of co-heirs, or of feveral legatees in the fame fubject. A copartnerhip may be fo conttituted, that one of the partners fhall, either from his fole right of property in the fubject, or from his fuperior fiill, bo intitled to a certain fhare of the profits, without being fubjected to any part of the lofs; but a fociety, where one partuer is to bear a certain proportion of lofs, without being intitled to any fhare of the profits, called by the Romans focietas leonina, is jully reprobated. All the partners are intitled to fhares of profit and lofs proportioned to their feveral ftocks, where it is not utherwife covenanted.
6. As partne:s are united, from a delectus perfone, in a kind of brothethood, no partner can, without a fpecial power contained in the contract, transfer any part of his fhare to another. All the partners are bound in folidum by the obligation of any one of them, if he fubfcribe by the firm or focial name of the company; unlefs it be a deed that falls not under the common courfe of adminiffration. The company effects are the common property of the fociety fubjected to its debts; fo that no partner can claim a divifion thercof, even after the fociety is diffolved, till thefe are paid: and, confequently, no creditor of a partner can, by diligence, carry to himfelf the property of any part of the common flock, in prejudice of a company creditor : but he may, by arreftment, fecure his debtor's fhare in the company's hands, to be made forthcoming to him at the clofe of the copartnerfhip, in fo far as it is not exhaufted by the company debts.
7. Society bcing founded in the mutual confidence among the focii, is diffolved, not only by the renunciation, but by the death of any one of them, if it be not otherwife fecially covenanted. A partner who renounces upon unfair views, or at a critical time, when his withdrawing may be fatal to the feciety, loofes his partners from all their engagements to him, while he is bound to them for all the profits he fhall make by his withdrawing, and for the lofs arifing thereby to the company. Not only natural, but civil death, e. g. arifing from a fentence inflifting capital punifhment, makes one incapable to perform the duties of a partner, and confequently diffolves the fociety. In both cafes, of death and renunciation, the remaining partners may continue the copartnerhip, either exprefsly, by entering into a new contract; or tacitly, by carry-
ing on their trade as formerly. Public trading com. panies are now every day conltituted, with rules very different from thole which either obtained in the Roman law, or at this day obtain in private fucieties. The propictors or partners in thefe, though they may tranffer their fhares, cannot renounce; nor does clieir death diffulve the company, but the fhare of the deceafed defcends to his reprefentative.
8. A joint trade is not a copartnerhip, but. a mo- A jnint mentary contract, where two or inore perfons agree to trale. contribute a fum, to be employed in a particular conrfe of trade, the produce whereof is to be divided among the adventurers, according to their feveral Mares, after the voyage is finifhed. If, in a joint trade, that part$n \in r$ who is intrulled with the money for purclafing the goods, thould, in place of paying them in cafh, buy. them upon credit, the furnither who followed his faith alone in the fale, has no recourfe againt the other adventurers; lie can only recover from them what of the buyet's fhare is yet in their hands. Wlrete any one of the adventurers in a joint trade becomes bankrupt, the others are preferable to his creditors, upon the common fock, as long as it continues undivided, for their telief of all the engagements eutered into by them on account of the adventure.
2. Mathdate is a contract, by which one employs another to manage any bulintis for him; and by the Roman law, it mult have been gratuitous. It may be conftituted tacitly, by one's fuffering another to aft in a certain branch of his affairs, for a tract of time together, without challenge. The mandatory is at liberty not to accept of tbe mandate; and, as his powers are folely founded in the mandant's commiffion, he mult, if he undertakes it, Atrictly adhere to the direc. tions given him: Nor is it a good defence, that the method he followed was more rational ; for in that his employer was the proper judge. Where no fpecial rules are preferibed, the mandatory, if he acts prudently, is fecure, whatever the fuccefs may be; and he can fue for the recovery of all the expences reafonably deburfed by him in the execution of his office.
10. Mandates may be general, containing a power of adminitlering the mandant's whole affairs; but no mandate implies a power of difpofing gratuitoully of: the conltituent's properiy, nor tven of felling his heritage for an adequate price : but a general mandators may fell fuch of the moveables as mult otherwife perith. No mandatory can, without fpecial powers, tranfact. doubtful claims belonging to lis conftituent, or refer them to arbiters.
11. Mandates expire, (1.) By the revocation of the employer, thougt only tacit, as if he mould name another mandatory for the fame bufinefs. (2.) By the renunciation of the mandatory ; even after he has executed part of his commiffion, if his office be gratuitous. (3.) By the death, either of the mandant or mandatory: But if matters are not entire, the mandate continues in force, notwithftanding fuch revocation, renunciation, or death. Procuratories of refignation, and precepts of feifin, are made out in the form of mandates; but, becaule the $y$ are granted for the fole benefit of the mandatory, all of them, excepting precepts of clare confat, are declared (by act 1693 ) to continue after the death either of the granter or grantee. Deeds which contain a clanfe or mandate for regiftration, are for the
iw of fame reafon made regifrable after the death of either (by act 1093 and 1696 .)
12. The favour of commerce has introduced a tacit mandate, by which matters of thips are impowered to contrast in name of their exercitors or employers, for repairs, hip.provifions, and whatever elfe may be neceflary for the hhip or crew; fo as tn ollige not themfelves only, but their employere. Whoever has the actual charge of the fhip is deemed the mafter, though he Thould have no commiffion from the exercitors, or fhould be fablituted by the matter in tbe direction of the fhip without their knowledge. Exercitors are liable, whether the matter has paid his own money to a merchant for neceffiaies, or has borrowed money to purchafe them. The furnifher or lender mult prove that the fhip needed repaiss, provifions, \&c. to fuch an extent ; but he is under no neceffity to prove the application of the money or materials to the fhip's uife. If there are feveral exercitors, thcy are liable finguli in $f_{0}$ Eitum. In the fame manner the undertaker of any brancla of trade, manufacture, or other land negociation, is bound by the contracts of the inflitors whom he fets over it, in fo far as relates to the fubject of the prapofiura.
13. Contracts and obligations, in themfelves imperfeet, receive flrength '夕 the contraftor or his heirs doing any aet thereafter which imports an approbation of them, and confequently fupplies the want of an origi. nal legal confent. This is called bemologation; and it takes place even in deeds intrinfically null, whet her the nullity arifes from the want of tatutory folemnities, or from the incapacity of the granter. It cannot be inferred, (1.) By the act of a perfon who was not in the knowledge of the original deed; for one cannot ap. prove what he is ignorant of. (2.) Homologation has no place where the act or deed, which is pleaded as fuch, can be afrribed to any other caufe; for an intention to come under an obligation is not prefumed.
14. Quaff-contrags are formed without explicit confent, by one of the parties doing fomething which by its nature either obliges him to the other party, or the other party to him. Under this clafs may be reckoned tutory, \&c. the entry of an heir, n:gotiorumn gefio, indebitif folutio, communion of goods between two or more common proprietors, and nercium jatius levarde navis caufa. Negatiorum gefio forms thofe obligations which ariie from the management of a perfon's affairs, in his abfence, by anothcr, without a mandate. As fuch manager atts without authority from the propietor, he ought to be liable in exact diligence, unlefs he has from friendhhip interpofed in affairs which admitted no delay : and he is atcountable for his intromifions with interefl. On the other part, he is intitled to the recovery of his neceffisry deburfements on : hle fubjeet, and to he relieved of the cbligations in which he may have bound himfelf in confequence of the management.
15. Indelizi folustio, or: the payment to one of what is not due to him, if made through any mitake, either of fact, or even of law, founds him who maje the payment in an aftion againft the receiver for repayment (condizitio indelitis.) This action docs not lie, (1.) If the fum paiid was due $e x \times$ aquitate, or by a natural obligation : for the ohligation to reftore is founded foldy in equity. (2.) If he who made the payment
knew that nothing was due ; for qui corfulto dar quod Law of non dolchene, prafiumitur donare.

Scublant
16. Where two or mure perfons become common Rixhr of as proprictors of the fame fubject, either by legacy, gift, Righr of w-
or purchafe, without the view of copartnerfhip, an olo vong pro. ligation is thereby created among the proprietors to persy. communicate the profit and lols arifing from the fubject, while it remains common: And the fuhject may be divided at the fuit of any having intereft. This divifion, where the quaftion is among the common propric. tors, is according to the valuation of their respetive properties: But where the quellion is between the proprictors and thofe having lervitudes upon the property, the fuperfice is only divided, without prejudice to the property. Commonties belonging to the king, or to royal boroughs, are not divifible. Lands lying runrig, and belonging to different proprietors, may be divided, with the exception of borough and incorporated acres; the execution of which is committed to the judge-ordinary, or juftices of the peace.
17. The throwing of goods overhoard, for lightea- Lex Rbodis ing a fhip in a ftorm, creates an obligation, whereby de jubluo the owners of the fhip and goods faved are obliged to contribute for the relicf of thofe whofe goods were thrown overboard, that \{o all may bcar a proportional lofs of the goods ejected for the common fafety. In this cuntribution, the flip's provifions fuffer no eftimation. A mafter who has cut his matt, or parted with his anchor, to fave the thip, is intitied to this relief; but if he has lote them by the flurm, the lofs falls only on the flip and freightt. If the cjection does nut fave the thip, the goods. preferved from fhipwreck are not liable in coutribution. Ejection may be lawfully made, if the maitter and a third p'ritt of the mariners judge that meature neceffary, though the owner of the goods fhould oppore it : and the goods ejected are to be valued at the price that the goods of the fame fort which are faved fhall be afterwards fold for.
18. There are certain obligations which cannot Accefforp fubfirt by themfelves, but are acceffions to, or make a abligations. patt of, other obligations. Of this fort are fidjy/fion, and the olligation to pay interefl. Cautionry, or fidejuflion, is that cbligation by which one becomes engaged as fecurity for another, that he fhall either pay a tum, or perforn a deed.
19. A cautioner for a fum of money may be bound, Cautionry. either fimply as cautioner for the principal debior, or conjuncely and feverally for and with the principal debtor. The firt has, by our cultoms, the benfficium orlinis, or of difcuflion ; by which the creditor is obliged to difulfs the proper debtor, before he can infiit for payment againift the cautioner. Where one is bound as full debor with and for the principal, or conjunctly and feverally with him, the two obligants are bound equally in the fame obligation, each in folidum; and confequently, the cautioner, though he is but aut accefliry, may be fued for the whole, withont either difcuffing or even citing the principal debtor. Cautioners for ferformance of facts by another, or for the faithatul difcharge of an office (c. $g$. for faclors, tuîris \&c.), cannot by the nature of their engagement be bound conjunetly and feverally with the principal obligant, becaufe the fast to which the principali, is bound cannot poffibly be performed by any other. In fuch engagements, therefore, the failure muil be previoully
law of conftituted againft the proper debtor, before action can Scotland. be brought againft the cautioner for making up the lofs of the party fuffering.
20. The cautioner, who binds himfelf at the defire of the principal debtor, has an aciio mandati or of relief againft him, for recovering the principal and inrereft paid by himfelf to the creditor, and for neceffary damages; which action lies de jure, though the creditor fhould not affign to him on payment. As relief againft the debtor is implied in tidejuffory obligations, the cautioner, where fuch relicf is cut off, is no longer bound : hence, the defence of prefcription frces the cautioner, as well as the principal debtor.

2 I . But, (1.) Where the cautionry is interpofed to an obligation merely natural, the relief is reftricted to the fums that have really turned to the debtor's profit. (2.) A cautioner who pays without citing the debtor, lofes his relief, in fo far as the debtor had a relevant defence againft the debt, in whole or in part. Relief is not competent to the cautioner, till he either pays the debt, or is diltreffed for it ; except, ift, Where the debtor is exprefsly bound to deliver to the cautioner his obligation cancelled, againft a day certain, and has failed; or, 2dly, Where the debtor is vergens ad inopiam; in which cafe the cautioner may, by proper diligence, fecure the debtor's funds for his own relief, even before payment or diltrefs.
22. A right of relief is competent de jure to the cautioner who pays, againf his co-cautioners, unlefs where the cautioner appears to have renounced it. In confequence of this implied relief, a creditor, if he fhall grant a difcharge to any one of the cautioners, muft, in demanding the debt from the others, deduct that part as to which he has cut off their relief by that difcharge. Where the principal debtor, in a bond in which a cautioner is bound, grants bond of corroboration with a new cautioner, both cautioners, as they intervene for the fame dsbt, and at the defire of the fame debtor, have a mutual relief againt each other ; but where the cautioner in the firft bond figns as a principal obligant in the corroboration, the cautioner in the new bond, it would feem, would be intitled to a total reliff againft the firft cautioner. At fame time, the decifions of the court of feffion are not perfectly at one upon this branch of the dotrine of cautionry.
23. Cantionry is alfo judicial, as in a fufpenfion. It is fufficient to loofe the cautioner, that when he became bound, the fufpender had good reafon to fufpend, e. g. if the charger had at that period no title, or had not then performed his part, though thefe - grounds of fufpenfion fhould be afterwards taken off. In all maritime caufes, where the parties are frequently foreigners, the defender mult give caution judicio $f_{5}$ fii et judicatum Solvi: fuch cautioner gets free by the death of the defender before fentence; but he continues bound, though the caufe fhould be carried from the admiral to the court of feffion. This fort of caution is only to be exacted in caufes ftriftly maritime.
24. It happens frequently, that a creditor takes two or more obligants bound to him , all as principal debtors, withont fidejuffion. Where they are fo bound, for the performance of facts that are in themfelves indivifible, they are liable each for the whole, or finguli in foliduus. But, if the obligation be for a
fum of money, they are only liable pro rata; unlefs, Law ol
(1.) Where they are in exprefs words bound conjunct1s and feverally; or, (2.) In the cafe of bills or pro. miffory notes. One of feveral obligants of this fort, who pays the whole debt, or fulfils the obligation, is intitled to a proportional relief againtt the reit; in fuch manner, that the lofs mult, in every cafe, fall equally upon all the folvent obligants.
25. Obligations for fums of money are frequently interef, accompanied with an obligation for the anuualrent or money. interelt thereof. Intereff (ufure) is the profit due by the debtor, of a fum of monty to che creditor for the ufe of it. The canon law confidered the taking of intereft as-unlawful : the law of Mofes allowed it to be exacted from ftrangers: and all the reformed na. tions of Europe have found it neceffary, after the example of the Romans, to authorife it at certain races fixed by ftatute. Soon after the reformation, our legal intereft was fixed at the rate of to per cent. per annum ; from which time it has been gradually reduced, till at lait, by 12 Ann. Ant. 2, c. 16 . it was brought to five per cent. and has continued at that rate ever fance.
26. Intereft is due, cither by law or by pacion. It is duc ly lazu, either from the force of flatute, under which may be included acts of federunt, or from the nature of the tranfaction. Bills of exclange, and inland bills, though they fhould not be protefted, carry intereft from their date in cafe of not acceptance; or from the day of their falling due, in cafe of acceptance and not payment. Where a bill is accepted, which bears no term of payment, or which is payable on demand, no intereit is due till demand be made of the fum, the legal voucher of which is a notorial protelt. Interelt is due by a debtor after denunciation, for all the fums contained in the diligence, even for that part which is made up of intereft. Sums .paid by cautioners on diftrefs carry intereft, not only as to the principal fum in the obligation, but as to the intereft paid by the cautioner. Factors named by the court of feffion are liable for intereft, by a fpecial act of federunt; fee $\mathrm{N}^{\circ}$ clxxii. 1 i.
27. It arifes ex. lege, or from the nature of the tranfaction, that a purchafer in a fale is liable in interelt for the price of the lands bought from the term of his entry, though the price fhould be arrefted in his hands, or though the feller fhould not be able to deliver to him a fufficient progiefs or title to the lands; for no purchafer can in equity enjoy the fruits of the lands, while at the fame time he reains the intercit of the price: but lawful confignation of the price made by a purcliafer, upon the refuial of the perfon's having right to receive it, ftops the currency of interelt. Where one intermeddles with money belonging to another which carries intereft, he ought to reftore it cum omai obventione et cau $\sqrt{a}$; and is therefore liable in the interelt of it, as being truly an acceffory of the fubject itfelf. It is alfo from the nature of the tranfaction, that intereit is in certain cafes allowed to merchants or others in name of damages.
28. Intereit is due by exprefs pacion, where there is a claule in a bund or obligation, by which money is made to carry intereft. An obligation is not lawful, wherc it is agreed on, that the yearly intereit of the fum lent, if it thould not be paid punctually as.it
mortis canfin, are of the nature of ligacies, and like bearing intereft ; but an obligation may be lawfully granted, not only for the fum truly lent, but for the intereft to the day at which the obligation is made payable, whereby the intermediate intereft is accumulated into a principal fuin from the term of payment. Interelt may be allo due by insplied paction: Thus, where intereft upon a dibt is by a letter promifed for time paft, fuch promife impliss a paction for iuterelt as long as the debt remains unpaid; thus alfo, the ufe of payment of intereft prefumes a paction, and when intereft is expreffed for one term, it is prefumed to be bargained for till payment.
29. The fubject-matter of all obligations confifts either of things, or of fats. Things exempted from commerce cannot be the fubject of obligation. (See No clxii. 2.) One cannct be obliged to the performance of a fact naturally impoffible; nor of a fact in itfelf immoral, for that is alfo in the judgment of law impoffible. Since impoffitle obligations are null, no penalty or damage can be incurred for non performance : but it is otherwife, if the fact be in itfelf porfible, though not in the debtor's power; in which cafe the rule obtains, locum faci imprafubilis fulit damzum et intereffe.
30. An obligation, to which a condition is adjected, either naturally or morally impoffible, is in the general cafe null; for the parties are prefumed not to have been ferious. But fuch obligation is valid, and the condition thereof held pro non fcripta, (1.) In teftaments; (2.) In obligations, to the performance of which the granter lies under a natural tie, as in bonds of provifion to a child. Where an obligation is granted under a condition, lawful but unfavourable, e.g. that the creditor thall not marry without the confent of certain friends, no more weight is given to the condition than the judge thinks reafonable. A condition, which is in fome degree in the power of the creditor himfelf, is held as fulfilled, if he has done all he could to fulfil it. Implement or performance cannot be demanded in a mutual contract, by that party who himfelf declines or cannot fulfil the counterpart.
31. Donation, fo long as the fubject is not delivered to the donce, may be jultly ranked among obligations; and it is that obligation which arifes from the mere good will and liberality of the granter. Donations imply no warrandice, but from the future facts of the donor. They are hardly revocable by our law for ingratitude, though it hould be of the groffet kind: thofe betwixt man and wife are revocable by the donor, even after the deaih of the donee; but remuneratory grants, not being truly donations, cannot be fo revoked. That fecial fort of donation, which is conflituted verbally, is called a pronife. The Roman law intitled all donors to the beneficium compcten. tis, in virtue of which they might retain fuch part of the donation as was neceflary for their own fubfift. erice. Our law allows this benefit to fathers, with refpect to the provifions granted to their children; and to grandfathers, which is a narural confequence of childrens obligation to aliment their indigent parents; but to no collateral relation, not even to broshers.
32. Donations made in contemplation of death, or
them revocable: confequently, not being effectual in the granter's life, they cannut compste, with any of his creditors; not even with thofe whofe debts were contracted after the donation. They are underfood to be given from a perfonal regard to the donee, and therefore fall by his predeceafe. No deed, after delivery, is to be prefumed a clonatio mortis calufa; for revocation is excluded by delivery.
33. Deeds are not prefumed, in itubio, to be donations. Hence, a deed by a debeor to his creditor, if donation be not expreffed, is prefumed to be grantel in fecurity or fatisfaction of the debt; but bonds of provilion to children are, from the prefumption of paternal affection, con!trued to be intended as an additional patrinony : yet a tocher, given to a daughter in her marriage-contract, is prefin ned to be in Gatisfaction of all former bonds and dsbts; becaufe marriage contracts ufually contain the whole provifions in favour of the bride. One who aliments a perfon that is come of age, without an exprefs paction for board, is prefumed to have entertained him as a friend, unlefs in the cafe of thofe who earn their living by the entertainment or board of Atrangers. But alimony given to minors, who cannot bargain for themfeives, is not accounted a donation; except either where it is prefumed, from the near relation of the perfon alimenting, that it was given ex piefate; or where the minor had a father or curaturs, with.whom a bargain might have been made.

## Secr. XVI. Of the difflution or extinction of obligations.

Obligations may be diffolved by performance or Extinstion implement, confent, compenfation, novation, and confufion. of obligan (1.) By fpecifical performance: thus, an obliga - tions, as, tion for a lum of money is extinguifhed by pay- ance. ment. The creditor is not obliged to accept of payment by parts, unlefs where the fum is payable by different divifions. If a debtor in two or more feparate bonds to the fame creditor, made an indelinite payment, without afcribing it at the time to any one of the obligations, the payment is applied, ath, To intereft, or to fums not bearing interelt. 2 dly , To the fums that are leaf fecured, if the debtor thereby incurs no rigorous penalty. But, 3 dly, If this application be penal on the debtor, e. g. by fufferng the legal of an adjudication to expire, the payment will be applied fo as to fave the debtor from that foriciture. Where one of the debts is fecured by a cautioner, the other not, the application is to be fo made, catcris pariluus, that borh creditor and cautionen may have equal jullice done to them.
2. Payment made by the debtor upon a miltake in fact, to one whom he believed, upon probable grounds, to have the right of rectiving payment, extinguilhes the obligation. But payment made to one, to whom the law denies the power of receiving it, has not this effect; as if a debtor, feized by letters of caption, fhould make payment to the meffenger ${ }^{2}$. for ignorantia juris neminenn excufat. In all debts, the debtor, if he be not interpelied, may fafely pay before the rerm, except in tack-duties or feu-durits; she payment whercof, before the terms at which they
law of Scotland.
are made payable, is coniltrued to be collufive, in a queflion with a creditor of the landlord or fuperion. Payment is in dubio prefumed, by the voucher of the debt being in the hands of the debtor; chirograptoum, apud debitorem reperian, prafumitur Solutum.
By confent 3. Ohligations are extinguihable by the confent of the creditor, who, without full implement, or even any implenent, may renounce the right conflituted in his own favour. Thlough a difcharge or acquittance granted by one whom the debtor bona fide took for the creditor, but who was not, extinguifhes the obligation, if the fatisfaction made by the debtor was seal; yet where it is imaginary, the difcharge will not fcreen him from paying to the true creditor the debt for which he had made no prior fatisfaction. In all debts which are confticuted by writing, the extinction, whether it be by feceifical performance or bare confent, mur be proved, either by the oath of the creditor, or by a difcharge in writing ; and the fame folemnities which Jav requires in the obligation, are noceffary in the difcharge: but, where payment is made, not by the debtor himfelf, but by the creditor's intromifion with the rents of the debtoris eftate, or by delivery to him of gonds in name of the debtor, fuch delivery or intromifion, being fagi, may be proved by witncfes, though the debt fhonld have been not ouly couflituted by writing, but made real on the debtor's lands by adjudication.
4. A difcharge, though it fhould be general, of all that the granter can demand, extends not to debts of an uncommon kind, which are not prefumed to have been under the granter's eye. This doetrine applies alfo to general aflignations. In annual payments, as of rents, feu-duties, intereft, \&ce. three confecutive difcharges by the creditor, of the yearly or termly duties, prefume the payment of all precedings. Two difcharges by the ancettor, and the third by the heir, do not infer this prefumption, if the heir was ignorant of the anceflor's difcharges. And difcharges by an adminifltrator, as a factor, tutor, \&e. prefume only the payment of all preceding duties incurred during his adminittration. This prefumption arifes from repeating the difcharges thrice fucceflively; and fo does not hold in the cate of two difcharges, though they fhould include the duties of three or more terms.
By compenfation.
5. Where the fame perfon is both creditor and debtor to another, the mutual obligations, if they are for equal fums, are extinguilhed by compenfation; if Cor unequal, thill the leffer obligation is extinguifhed, and the greater diminithed, as far as the concourfe of debit and credit gues. To found compenfation, (1.) Each of the parties mult be debtor and creditor at the fame time. (2.) Each of them mult be debtor and creditor in his own right. (3.) The merutual debts mult be of the fame quality : hence, a fum of money cannot be compenfated with a quantity of corns; becaufe, till the prices are fixed, at which the corns are to be converted into money, the two debts are incommenfurable. Lattly, compenfation cannot be admitted, where the mutual debts are not cleasly afcertained, either by a written obligation, the fentence of a judge, or the oath of the party. Where this requires but a fhomt difcufion, Centence for the purfuer is delayed for fome tune, ex equitate, that the defender may make good his ground of com-
penfation. Where a debe for fungibles is afcertained in money by the fentence of a judge, the compenfation can have no effect farther back than the liquida. tion; becanfe, before fentence, the debts were incommenfurable: but, where a debt for a fum of money is, in the courfe of a fuit, conflituted by the outh of the debtor, the compenfation, after it is admitted by the judge, operates reiro, in to far as conccrns the currency of intereft, to the time when, by the partice acknowledgment, the debt became due.: for, in this cafe, the debtor's oath is not what creates the debt, or makes it liquid; it only declares that fuch a liquid fum was truly sue before. Compenfation cannot be offered after decree, either by way of fufpenfion or reduction; unlefs it has been formerly pleaded, and unjuftly repelled. Decrees in abfence are excepted.
6. The right of retention, which bears a near re-By retex. fersblance to compenfation, is chiefly competent, where tion. the mutual debts, not being liquid, cannot be the ground of compenfation; and it is fometimes admitted ex equitate, in liquid debts, where compenfation is excluded by flatute: thus, though compenfation cannot be pleaded after decree, either againft a creditor or his alfignee; yet, if the original creditor fhould become bankrupt, the debtor, even after decree, may retain againf the affignee, till he gives fecurity for fatisfying the debtor's claim againft the cedent. This right is frequently founded in the expence deburfed or work employed on the fubject retained, and fo arifes from the mutual obligations incumbent on the parties. It has never been difputed that retention of goode was competent, until payment or fatisfaction of the debt incurred in relation to thefe gaods; but it was found by the court of Seffion, in a cale which was very lately before them, that goods could not be retained by a manufacturer until payment of a prior debt; the debt incurred upon the goods in his hand being offered; and although the debtor had become bankrupt, and the manufacturer muft otherwife rank as a common creditor for his prior debt. But retention may be fuftained, though the debt duc to him who claims it does not arife from the nature of the obligation by which he is debtor: thas, a factor on a land eftate may retain the fums levied by him in confequence of his factory, not only till the be paid of the difburfements made on occafion of fuch eftate, but alfo till he be difclarged from the feparate engagements he may have entercd into on his conftituent's account.
7. Obligations are difolved by novation, whereby By nowone obligation is changed into another, without chan tien. ging either the debtor or creditor. The firf obligation being thereby extinguifhed, the cautioners in tit are loofed, and all its confequences difcharged; fo that the debtor remains bound urily by the laft. As the creditor to whon a right is once conttituted, ought not to lofe it by implication, novation is not eafily piefumed, and the new obligation is conltrued to be merely corrobora. tive of the old; but, where the fecond obligation ex. By deleg: preisly bears to be in futisfagion of the firtt, thefe words tion. mult neceffarily be explained into novation. Where the creditur accepts of a new debtor, is place of the former who is difcharged, this method of extinetion is called delegation.
8. Obligations are extinguifad confufone, where the By confe debigion.

aw of debit and credit meet in the fame perf.n, either by fuczotland. ceffion or fingular title, e g. when the debtor fueceeds to the creditor, or the creditor to the debtor, or a fltan. ger to both; for one cannot be debtor to himfelf. If the fucceffion, from which the confufio arifes, happens afterwards to be divided, fo as the debtor and creditor come again to be different perfons; the confufio does ant produce an extinction, but ouly a temporary fufpenfion, of the debt.

## Sect. XVII. Of Ajfignations.

Heritable rights, when they are cloathed with infefimest, are tranfmitted by difpolition, which is a writing containing procuratory of relignation and precept of feifin; but thofe which either require no feifin, or on which feifin has not atually followed, are tranfmiffible by fimple affignation. He who grants the aflignation is called the cellent; and he who reccives it, the aftimee or ceffionary: if the affignee conveys his right to a third perfon, the deed of conveyance is called a trarflution; and if he aftigns it back to the cedent, a retroceflion. Certain rights are, from the ufes to which they are deftined, iucapable of tranfmiffin, as alimentary rights : others cannot be affigned by the perfu, invefted in them, without fpecial powers given to him ; as tacks, revcifions: the tranfmiftion of a third fort, is not prefuned to be intended, without an exprefs conveyance; as of paraphernal goods, which are fo proper to the wife, that a general aftitynation, by her to her hufband, of all that did or fhonld belong to her at her deceafe, does not comprehend them. A liferent-right is, by its nature, incapable of a proper tranfinifion; but its profts may be affigned, while it fubfitts.
2. Affignations mult not only be delivered to the affignee, but intimated by him to the debtor.. Intimations are conlidered as fo neceffary for completing the conveyaace, that in a competiion between two aifignations, the laft, if firlt intimated, is preferred.
3. Though, regularly, intimation to the debtor is made by an inftrument, taken in the hands of a notary, by the affignee or his procurator; yet the law admits equipollencies, where the notice of the affignment given to the debtor is equally flrong. Thus, a charge upon letters of horning at the affignee's intance, or a fuit brought by lim againt the debtor, fupplies the want of intimation ; thefe being judicial acts, which expofe the conveyance to the eycs both of the judge and of the debtor; or the debtor's promife of payment by writing to the affignee, becaufe that is in effeet a corroborating of the original debt. The affignee's porfeffion of the right, by entering into payment of the rents or intereft, is alfo equal to an intimation; for it imports, not only notice to the debtor, but his actual compliance: but the debtor's private knowledge of the affignment is not fuftained as intimation.
4. Certain conveyances need no intimation. (1.) Indorfations of bills of exchange; for thefe are not to be fettered with firmb, introduced hy the laws of particular fates. (2.) Bank-notes are fully conveyed by the bare delivery of them; for as they are payable to the bearer, their property mult pals with their pofferfion. (3.) Adjudication, which is a judicial conveyance. and marriage, which is a legal one, carry the full right of the fabjects thereby conveyed, without
intimation: neverthelefs, as there is nothing in thefe conveyances which can of themfelves put the debtor in mala fuct, he is therefore in tuto to pay to the wife, or to the original creditor in the debt adjudged, till the marriage or adjudication be notified to him. Affignments of moveable fubjects, though they be intimated, if they are made retenta pofe hone, (the cedent retaining the poffeffon), cannot hurr the cedent'o creditors; for fuch rights are prefurned, in all queltions
with creditors, with creditors, 10 be collufive, and granted in truit for the cedent himfelf.
5. An affiguation carries to the affignee the whole Effects of right of the fubject conveyed, as it was in the condent affignation and confequently, he may ufe diligence, either in his cedent's name while he is alive, or in his own.
6. After an affignation is intimated, the debtor cannot prove a payment, or compenfation, by the oath of the cedent, who has no longer any intereft in the debt; wilefs the matter has been made litigious by an action commenced prior to the intimation : but the debtur may refer to the oath of the affignee, who is in the right of the debt, that the affignment evas gratuitous, or in trult for the cedent : either of which being proved, the oath of the cedent will affect the affignee. If the aflgnation be in part onerous, and in part gratuitous, the cedent's oath is good againlt the alfignee,
only in fo far as his right is gratuitous. All defere only in fo far as his right is gratuitous. All defences competent again it the original creditur in a moveable debt, which can be proved otherwife than by his nath, contimte relevant againtt even and onerous affiynee ; whofe righe can be no better than that of his author, and mutt therefore remain affected with all the burdenz which attended it in the author's perfon.

## SECT. XVIII. Of arreftents and poindings. clxaviab.

The diligences, whereby a creditor may affect his Arrefmener debter's moveable fubjects, are arrefment and poinding. By arre? inest is fumetimes meant the fecuring of a criminal's perfon till trial; but as it is underftood in the rubric of this title, it is the order of a judge, by which he who is debtor in a moveable ubligation to the arrelter's debtor, is prohibited to make payment or dclivery till the debt due to the arrefler be paid or fecured. The arrelter's debtor is ufually callest the common debtor; becanse, where there are two or more competing crcditers, he is debtor to all of them. The perfon in whofe hands the diligence is ufed is tlyled
the arreftee.
2. Arrettment may be laid on by the authority either of the fupreme court, or of an inferior judge. In the firlt cafe, it proceeds either upon fpecial leiters of arreflenent, or on a warrant contained in letters of horning; and it mult be executed by a meffenger. The warrants granted by inferior judges are called precepts of arrefment, and they are executed by the officer proper to the court. Where the debtor to the common. debtor is a pupil, arreltment is properly ufed in the hands of the tutor, as the pupil's adminilitator: this doctrine may perhaps extend to other general adminiItrators, as commiffioner, \&c. But arreltment, ufed in the hands of a factor or iteward, cannot found an action of forthcoming without calling the confituent. Where. the debtor to the conmmon debtor is a corporation, ai:reftment mult be ufed in the hauds of the diresima o:

Law of Scutland.
trealurer, who reprefent the whole body. Arreftment, when it is ufed in the hands of the debtor himfelf, is inept ; for that diligence is intended only as a reftraint upon third parties.
3. All debts, in which one is perfonally bound, tho' they fhould be heritably fecured, are grounds upon which the creditor may arreft the moveable eftate belonging to his debtor. Arreftment may proceed on a debt, the term of payment whereof is not yet come, in cafe the debtor be vergens ad inopiam. If a debt be not yet conflituted by decree or regiltration, the creditor may raife and execute a fummons againft his debtor for payment, on which pending action arrettment may be ufed, in the fame manner as inhibition, which is called arrifiment upon a dependence. If one's ground of credit be for the performance of a fact, or if his depending procels be merely declaratory, with. out a conclufion of payment or delivery, fuch claims are not admitted to be fufficient grounds for arrellment.
What dehts 4. Moveable debts are the proper fubjeet of arreftarreftable. ment; under which are comprehended conditional debts, and even depending claims. For leffening the expence of diligence to creditors, all bunds which have not been made properly heritable by feifin are declared arreftable: but this does not extend so adjudications, wadfets, or other perfona! rights of lands, which are not properly debis. Certain moveable debts are not arrefable. (1.) Debts due by bill, which pais from hand to hand as bage of money. (2.) Future debts; for though inhi. bition extends to alquirenda as well as adquifita, yet arseftment is limited, by its warrant, to the debt due at the time of ferving it againit the arreftee. Hence, an arreftment of rents or intereft carries only thofe that have already either fallen due or at leaft become current. Claims, depending on the iffue of a fuit, ate not confidered as future debts; for the femtence, when pronounced, has a retrofpect to the period at which the claim was firt founded. The like doctrine holds in conditional debts. (3.) Alimentary debts are not arreftable; for thefe are granted on perfonal confiderations, and fo are not communicable to creditors: but the palt . intereft due upon fuch debt nay be arrefted by the perfon who has furniffed the alimony. One cannot fecure lis own effects in himfelf for his maintenance, fo as they ftrail not be affectatsle by his creditore. Salaries annexted to offices granted by the king, and particu. larly thofe granted to the judger of the Seffion, and the fees of fervants, are conlidered as alimentary funds ; but the furplue fee, over and above what is neceffary for the fervant's perfonal wiee, may be arrefted. It has alfo been found, that a wadfet fum configned afier an order of redemption ufed, but before decreet of declasator, is not arrettable.
5. If, in contempt of the arreftment, the arreftee mall make payment of the fum, or deliver the goods arreited, to the common debtor, he is not only liable criminally for breach of arreftment, but he mutt pay the debt again to the arrefter. As the law formerly ftood, 3 arreltment ufed at the market crole of Edinburgh, pier and Alore of Leith, against a perfon furth of the kingdom, was good; fo that if the arreftee made payment to his creditor after the date of the arreftment, he was found liable in fecond payment to the ararefer, becaufe he had done all in his power to notify

## 解

 W.his diligence. This, however, is very properly altered Law of by $\oint 3$. of the act of the 23 d Geo. III, which declares, Scotland. that an arreftment ufed at the market crofs of Edin. burgh, pier and Shore of Leith, in the hands of any perfon out of the kingdom, without other fufficient notification, fhall not interpel the arreftec from paying bona fide to the original creditor. Arreftment is not merely prohibitory, as inhibitions are; but is a ftep of diligence which founds the ufer in a fubfequent action, whereby the propert y of the fubject arrelted may be adjudged to him. It therefore does not, by our latter practice, fall by the death of the arreftee; bat continues to fublift, as a foundation for an action of forthcoming againt his heir, while the fubjeet arrefted remains in medio. Far lefs is arreftment lof, either by the death of the arrefter, or of the commen debtor.
6. Where arrelment proceeds on a depending ac- Loofing of tion, it may be loofed by the common debtor's giving arrefncat. fecurity to the arrefter for his debt in the event it fhall be found due. Arreftment founded on decrees, or on regiltered obligations, which in the judgment of law are decrees, cannot be loofed but upon payment or con. fignation; except, (1.) Where the term of payment of the debt is not yet come, or the condition has not yet exitted. (2.) Where the arreitment has proceeded on a regiftered contract, in which the debts or mutual obligations are not liquid. (3.) Where the decree is rufpended, or turned into a libel; for, till the fufpenfion be difcuffed, or the pending action concluded, it cannot be known whether any debt be truly due. A loofing takes off the nexus which had been laid on the fubject arretted; fo that the arreftee may thereafter pay fafely to lis creditor, and the cautioner is fubftituted in pilace of the arreltment, for the arrelter's fecurity: yet the arreter may, while the fubject continues with the arreftee, purfue him in a forthco. ming, notwithllanding the looling.
7. Arreftment is only an inchoated or begun dili. Fortheomgence; to perfect it, there mult be an action brought my on arby the arrelter againft the arreltee, to make the debt refment. or fubject arrefted forthcoming. In rhis action, the common debtor mutt be called for his interel, that he may have an opportunity of excepting to the lawfulnefs or extent of the debt on which the diligence proceeded. Before a forthcoming can be purfued, the debt due by tle common debtor to the arrefter mult be liquidated; for the arrefter can be no further intitled to the fubject arrefted than to the extent of the debt due to him by the common debtor. Where the fub. ject arrefted is a fum of money, it is, by the decree of forthcoming, sireeted to be paid to the purfuer towards fatisfying his debt; where goods are arrefted, the judge ordains thein to be expofed to fale, and the price to be delivered to the purfuer. So that, is cither cale, decrees of forthcoming are judicial afignations to the arrefter of the fubject arreftec.
8. In all competitions, regard is had to the dates, preferen not of the grounds of debt, but of the diligences pro- in a rell. ceeding upon them. In the competition of arreftments, ments. the preference is governed by their dates, according to the priority even of hours, where it appears with any certainty which is the firf. But, as arreftment is but a begnn diligence, therefore if a prior arrefter fhall neglect to infift in an action of forthcoming for fuch a time as may be reafonably conftrued into a defertion of
his begun diligence, be lofes his preference. But, as dereliction of diligence is not eafily prefumed, the dilance of above two years, between the firth arreftment and the decree of forthcoming, was found not to make finch a mora as to intitle the pofterior arrefter to a presference. This rule of preference, according to the dates of the feveral arreftments, holds, by our prefent practice, whether they have proceeded on a decree or on a dependence; on debts not yet payable, or on debts already payable; provided the pendency flail have been clofed, or the debt have become payable, before the iffue of the competition.

By act 23 d Geo. III. क. 2. it is enacted, that when a debtor is made bankrupt, in terms of the att 1696, as thereby extended (clxxxiii. 13.), all arrefments which Shall have been ufed for attaching any perfonal effects of fuck bankrupt within thirty days pier to the bankruptcy, or within four kalendar months immediately fubfequent, fall be puri paffic preferable: and in order to fave as far as polfible the expence of a multiplicity of arreltmouts, it is declared, that where the efffacts of a debtor are arrelled by any creditor within thirty days before the bankruptcy, or within four months after it, and a process of forthcoming or muttiplepoinding is brought in which fuch arreftment is founded on, it hall be competent for any other creditor producing his intereft, and making his claim in the faid process, at any time before the expiration of the faid four months, to be ranked in the fame manner as if he bad unfed the form of arreftment; the expence of railing the process, and of the diligence at the inftance of the creditor who raises it, being always paid out of the common fund. We here again repeat, that the enactments of this flatute are only temporary, and not yet a permanent part of the law of Scotland, whatever they may become when the fubject is refumed by the legifature upon the expiry of the act.
9. In the competition of arreftments with affignalions, an affgnation by the common debtor, intimated before arreftment, is preferable to the arreftment. If the alfignation is granted before arreftment, but not intimated till after it, the arrelter is preferred.
10. Pounding is that diligence affecting moveable fubjects, by which their property is carried directly to the creditor. No poinding can proceed, till a charge be given to the debtor to pay or perform, and the days thereof be expired, except poundings against vaffals for their feu-duties, and poindings againft tenants for rent, proceeding upon the landlord's own decree; in which the ancient cultom of poinding without a previous charge continues. A debtor's goods may be pointed by one creditor, though they have been arrelted before by another; for arreltment being but an imperfect diligence, leaves the right of the fubject fill in the debtor, and fo cannot hinder any creditor from using a more perfect diligence, which has the effect of carrying the property directly to himself.
11. No cattle pertaining to the plough, nor inftruments of tillage, can be pounded in the time of labouring or tilling the ground, unlefs where the debtor has no other goods. By labouring-time is underitood, that time, in which that tenant, whole goods are to be poinded, is ploughing, though he flould have been earlier or later than his neighbours; but fummer fatlowing does not fall under this rule.

Vol. IX. Part II.
12. In the execution of poinding, the debtor's goods muff be appraised, firth, on the ground of the lands where they are laid hold on, and a fecund time at the market-crofs of the jurisdiction, by the lated appraifers Form market-crofs of the jurisdiction, by the llated appraifers Form
thereof; or, if there be none, by perfons named by the ${ }^{\text {heres. }}$ meffenger or other officer employed in the diligence. Next, the meffenger mut, after public intimation by three oyeffes, declare the value of the goods according to the fecond appraifement, and require the debtor to make payment of the debt, including interest and expences. If payment hall be offered to the creditor, or in his absence to his lawful attorney; or if, in cafe of refufal by them, conlignation of the debt fall be made in the hands of the judge-ordinary or his clerk, the goods mut be left with the debtor; if not, the men. fencer ought to adjudge and deliver them over, at the appraifed value, to the ufer of the diligence towards his payment : and the debtor is intitled to a copy of the warrant and executions, as a voucher that the debt is difcharged in whole or in part by the goods poinded.
13. Minifters may poind for their llipends, upon one appraifement on the ground of the lands, and landlords were always in ute to puind fo, for their rents. Appraifement of the goods at the market-crofs of the next royal borough, or even of the next bead-borough of ftewartry or regality, though there jurifdictions be abolifhed, is declared as fufficient as if they were car. rued to the head borough of the fire. Poinding, weether it be confidered as a fentence, or as the execution of a fentence, molt be proceeded in between fun-rifing and fun-fetting; or at teal it mut be finifhed before the going off of day-light. The powers of the officer Powers of employed in the execution of poindings, are not clear ninferngers ly defined by cultom, in the cafe of a third party ing. claiming the property of the goods to be poinded. This is certain, that he may take the oath of the chimat, upon the verity of his claim; and if from thence it foal appear that the claimant's title is collufive, be ought to proceed in the diligence; but if there remains the leaf doubt, his fafeft courfe is to deliver the goods to the claimant, and to exprefis in his execution the reafons why poinding did not proceed.
14. Any perfon who tops a pounding via fart, on groundlefs pretences, is liable, both criminally, in the pains of deforcement (fee No clxxxvi. 15.), and civilly, in the value of the goods which might have been poinded by the creditor.

By the foresaid flatmate 23 Geo. III. § 4 . it is declares, that after a perfon is rendered bankrupt, as thereby directed, no pounding of the moveables belonging to fuch bankrupt, within 30 days before his bankruptcy, or within four kalender months thereafter, fall give a preference to foch poinder over the other lawful creditors of the bankrupt ; but the goods fo poinded hall be confidered as in media, and the perfon receiving the price of them flail be liable to make the fame furthcoming, fo as that all the other creditors of the bankrupt who are poffetifed of liquidate grounds of debt or decrees for payment, thall be incited to their proportion of the fame; provided they make their chain by fummoning the pointer at any time before the expiration of the faid four months, deducting always the expence of fuch poinding from the frt end of the price of fuch goods, together with 20 per cent. on the appraifed value, which the pounder fall retain

to account of his debt in preference to the other creditors; referving liberty to him to rank on the remaining fum for the full amonnt of the debt contained in his diligence. Anci it is by the faid act further declared, that where any perfon concerned in trade or manufactures is bankrupt, as before mentioned, it may be lawful for any creditor, to the amount of L. 100, or any two creditnrs to the amount of L. 150, or any three or more creditors to the amount of L.. 200 or up. wards, to apply for fequeftration of the eftate real and perfonal belonging to the dehtor: after awarding which, an interim factor, and then a truftee, hall be chonfen by the creditors, who is to conduct the bufinefs of the fequefration, according to the varions rules fixed and laid down by the flatute. The act, however, exprefsly exclutes a:ll others. except thufe concerned in trade or manufactures, from the benetit of the fequeftration; but it is probahle, when it conses to be renewed or digetled in another form, this part of it will fuffer an alteration.
cixxix.
Prescription, which is a method, both of efta. blifhing and of extinguifhine property, is either pofitize or negative. Poftivive prefcription is generally defined, as the Roman ufucupio, The acquifition of property (it Ihould rather be, when applied to our law, the fecuring it againft all further chillenge) by the poffeffor's continuing his poffeftion for the time which law has declared fuficient fur that purpofe: negative, is the Iofs or amiffion of a right, by uegkecting to follow it forth, or ufe it, during the whole time limited by law. The doctrine of prefeription, which is, by fome writers, condemned as contrary to jullice, has been introduced, that the claims of negligent creditors might not fubfit for ever, that property might be at laft fixed, and forgeries difoouraged, which the difficulty of detecting mult have made exceeding frequent, if no length of tine had limited the legal effect of writings.
2. Pofitive prefrription was fir $\AA$ intróduced into our law by 1617, c. 12 . which enacts, that whoever thall have poffeffed his lands, annualrents, or other heritages, peaceably, in virtuc of infeftments, for 40 years continually after their dates, fhall not chereafter be difquieted in his right by any perfon pretending a better title. Under beritages are comptehended every right that is fundo annexum, and capable of continual pofferfion. Continucd poffeflion, if proved as far back as the mentory of man, prefumes poffeflion upwards to the date of the infeftment. The whole courfe of poffeffion mult by the at be founded on feifins; and confequently no part thereof on che bare right of apparency: but 40 years poffefion, without feilin, is fufficient in the prefcription of fucb heritable rights as do not require feifin. The poffefluon muft alfo be withont any lazuful interruption, i. e. it muft neither be interrupted via fuake, nor via juris. The prefcription of fubjects not expreffed in the infeftment as part and pertinent of an. other fubject fpecially expreffed, has been explaizeci, NO clxvii. $\sigma$.
3. The act requires, that the poffeffor produce, as his title of prefeription, a charter of the lands preceding the 40 , ears poffefion, with the feifin following on it: and where there is no charter extant, fei-
fins, one or more, flanding together for 40 years, and proceeding either on retours or precepts of clare confat. This has given rife to a reafonable diftinction ohferved in practice, between the prefeription of a fingular fucceffor, and of an heir. Singular fucceffors mult produce for their title of prefciption, not on! a feifin, but its warrant, as a charter, difpolition, \&c. either in their own perfon, or in that of their author: but the production, by an heir, of felins, one or more, ftanding together for 40 years, and proceeding on retours or precepts of clare conffat, is fuficient. The heir is not obliged to produce the retonrs or precepts on which his feifins proceed, nor is the fingular fucceffor obliged to produce the ground of his charter; fo that if the titce of prefeription produced be a fair deed, and a fufficient title of property, the poffefor is fecure by the act, which admits no ground of challenge, hut falfehood. A fpecial ftatute, for cflablinhing the pofitive prefcription in moveable rights, was not necelfary ; for, fince a title in writing is not requifite for the acquiring of thefe, the negative prefeription, by which all right of action for recovering their property is cut off, effectually fecures the poffe for.
4. The negative prefcription of obligations, by the Negative laple of 40 years, was introduced into our law long preicicipbefore the politive, $(146), c .29 .-1474, c .55$.) tion. This prefription is now amplified by the forefaid act (1617), which has extended it to all attions competent upon heritable bonds, reverfions, and others whatoever; unlefs where the revelfinus are either incorporated in the body of the wadfet-right, or regilered in the regifer of severfions: And reverfions to incorporated, or regiftcred, are not only exempted from the negative prefcription, but they are an effectual bar againft any perfon from pleading the pofitive.
5. A florter negative prefcription is introduced by a fhorte Alatute, in certain rights and debts. Actions of fpuil-negarive zie, cjection, and others of that nathre, mut be pur-prefripfued within three years after the commiffion of the fact on which the action is fornded. As in fpuizzies and ejections, the purfuer was entitled, in odium of vinlence, to a proof by his own oath in litem, and to the violent profits againit the defender, the fatute meant only to limit thefe fpecial privileges by a three years prefcription, without cutting off the right of action, where the clain is rellricted to limple rettitution. Uuder the general words, and ubbers of that nature, are comprehended all actions where the purfuer is admitted to prove his libel by his own oath in litem.
6. Servants fees, houfe rents, mens ordinaries, (i.e. Prefcrip. money due for board), and merchants accounts, fall tion offe under the triennial prefeription, (by 1579, c. 83.) vants fee There is alfo a general claufe fubjoined to this tlatute, of other the like debts, which includes alimentaty debis, wages due co worknen, and accounts due to writers, agents, or procurators. Thefe debts may, by this act, be proved after the three years, either hy the writing or oath of the debtor ; fo that they prefcribe only as to the mean of proof by witnefles; but after the three years, it behnves the creditor to refer to the debtor's oath, not only the conititution, but the fubfitence of the debt. In the prefcription of houfe-rents, fervants fees, and alimony, each term's rent, fee, or alimony, runs a feparate courfe of prefeription; fo that in an action for thefe the claim will be reffricted to the arrears incurred within the three years immediately before
before the citation: Put, in accounts, prefcription does not begin till the laft article; for a fingle article cannot be ealled an account. Actions of removing mult alfo be purfued within three years after the warning. Reductions of erroneous retours preferibe, if not purfued within 20 years.
7. Minifers fipends and multures prefuribe in five years after they are due ; and arrears of rent, five years after the tenant's removing from the lands. As the prefeription of mails and duties wasjntroduced in fa. vour of poor tenants, that they might not uiffer by neglecting to preferve their difcharges, a proprietor if lands fubject io a liferent, who had obtained a leafe of all the liferented lands from the liferenter, is not intitled to plead it, nor a tackfman of onc's whole eflate, who had by the leafe a power of removing temants. Bargains entreerning moveables, or fums of money which are proveable by witnefles, prefcribe in five years after the bargain. Under thefe are included fales, locations, and all other confenfual cintracts, to the confitution of which writing is not neceflary. But all the abovementioned debts, may, after the five years, be proved, either by the oath or the writing of the debtor; of which above, (par. G.) A quinquennial prefeription is ellablifhed in arreltments, whether on decrees or depending ations: The firlt prefcribe in five years after ufing the arrelment, and the laft in five years after fentence is pronounced on the depending action.
8. No perfon binding for or with ansther, either as cautioner or co principal, in a bond or contract for a fum of money, continues bnund after feven years from the date of the bond, provided he has either a claufe of relisf in the bond, or a feparate bond of relief, intimated to the credirne, at his receiving the bond. But all diligence ufed within the feven years againft the cautioner flall ftand gord. As this is a public law, intended to prevent the bad confequences of rafh engagenents, its benefit canrint, before the laple of the feven years, he renonnced by the cautioner. As it is correctory, it is Mristly interpreted: Thus, bonds bearing a mutual claufe of relief pro rata, fall not under it; nor honds of corroboration, nor obligatious, where the condition is not purified, ar the term of payment not come within the feven years; becaufe no diHigence can be ufed on thefe. The flatute excludes all cautionries for the faithful difcharge of offices; thefe not being obligations in a bond or conatract for fums of money. And practice has denied the benefit of it to all judicial cautioners, as cautioners in a fufpenfion.-Actions of count and reckoning, competent either to minors againt their tutors ur curators, or vice verfa, prefrribe in $t \in n$ years afier the majority or death of the minor.
9 Holograph bonds, miflive letters, and books of o- account, not attelted by witnefles, pricribe in 20 years, unlefs the creditor thall thereafter prove the verity of the fubfeription by the debtor's oath. It is therefore fufficient to fave from the effect of this prefeription, that the conlitution of the debt be proved by the party's oath after the 20 years; whereas, in fli. pends, merchants accounts, \&c. net only the conftitution, but the fubfiltence of the debt, mult be proved by writing or the debtor's oath, after the term of prefeription. Some lawyers extend this preferip.
tion of holograph writings to all obligations for fums not exceeding I.. 100 Scost, which are not attelted by witneffes; becaufe though thefe are in practice fuflained, yet they ought not to have the fame duration with deeds attefted by witneffes. Though in the fhort prefcriptions of debts, the right of action is for ever loft, if not exercifed within the time limited; yet where action was brought on any of thofe debts, before the prefeription was run, it fubfifted, like any other right, for 40 years. As this defeated the purpofe of the acts eftablihing thefe preferiptions, all proceffes upon warrings, fpuilzies, ejections, or arreftments, or for payment of the debts contained in act $: 669$, c. 9 . are by the faid act, joined with 1655 , c. 14. declared to preferibe in five years, if not wakened within that time; fee $N$ elxxxiti. 26.
10. Certain obligations are lo't by the lapfe of lefs Extinction than 40 years, without the aid of ftatuse, where the nature of the obligation and the circumanes tions by tapature of the obligation, jultify it: thus, bills which are not intended for lafting fecurities, produced no aet:on, where the ereditor had been long filent, unlefs the fubfintence of the debt be proved by the debtor's oath; but the precife time was not fixed by practice. But the duration of bills is now limited to Gix years by the i2 Geo III.: rendered perpetual by 23 Geo. III. Thus allo, a reccipt for bills granted by a writer to his employer, not infilted uponfor 23 yeats, was found not productive of an action. The preferiptions of the reititution of minors, of the bencfit of inventory, \&c. are ex. plained in their proper places.
11. In the pofitive puefcription, as eftablifhed by Bona fues the act 8617 . the continued poffeffion for 40 years, prefcripproceeding upon a title of property not chazrgeable tion. with falfehood, fecures the poffeltor againt all other grounds of challenge, and fo prefumes bona fules, presjumptione juris et de jure. In the long negative pecfeription, bona futes in the debtor is nat requited : the crecitor's neglecting to infitt for folong a tine, is conttrued as an abandoning of his debt, and fo is equivalent to a difcharge. Hence, though the fubliftence of the debt fhould be referred to the debtor's own oath, sfter the 40 years, he is not liable.
12. Prefeription runs de momeato in nomentum: the Pefcripwhole time cietised by law mult be completed, before tinn, aa right can be either acquired or lofl by it; fo that whom it interruption, maje on the laft day of the 40 th year, runc., breaks its courfe. The poitive prefeription runs againft the fovereign hionfelf, even as $t$, his annexed property; but it is generally thought he cannot fuffor by the negative: be is fecured agaiof the negligence of his officers in the management of proceffes, by exprefs ftatute, $1600,6$. 14. The negative, as well as the pofitive prefcription, runs againlt the church, though churchmen have but a temporary interelt in their benefices. But hecaufe the rights of beueficiaries to their Atipends are liable to accidents, through the frequent change of incumbents, 13 years poffeflion does, by a rule of the Roman chancery which we have adopted, found a prefumptive title in the beneficiary: but this is not properly pefcription; for if by titles recovered, perhaps out of the incumbent's own hands, it flall appear that he has poffeffed tithes or -ther fubjcets to a greater extent than he ought, his poffiffion will be rafricted accordingly. This right

Law of muft not be confounded with that eftablifhed in favour Scotland. of churchmen, which is confined to church lands and rents, and conftitutes a proper prefcription upon a poffeffion of 30 years.
13. The claufe in the act 1617 , faving minors from prefcriprion, is extended to the pofitive, as well as to the negative prefcription; but the exception of minority is not admitted in the cafe of hofpitals for children, where there is a continual fucceffion of minors, that being a cafius infolitus. Minors are exprefsly excepted in feveral of the fhort prefcriptions, as 1579 , c. $18 .-1669, c .9$.; but where law leaves them in the conmon cafe, they mult be fubject to the common rules.
14. Preicription does not run contra non valentem agore, againtt one who is barred, by fome legal incapacity, from purfuing; for in fuch cafe, neither negligence nor dereliction can be imputed to him. This rule is, liy a favoursble interpretation, extended to wives, who ex revirentin maritali furhear to purfue actions con yetent to them agaiull their hufbands. On the fame ground, prefeription runs only from the time that the debt or right could be fued apon. Thus, inhibition preicribes only from the publifling of the deed granted to the inhibiter's prejudice; and in the prefcription of removinga, the years are computed only from the term at which the defender is warned to remove. Neither call prefcription run againft perfons who are already in poffefion, and fo can gain nothing by a purfuit. Thus, where a perfon, who has two adjudications affecting the fame lands, is in poffeffion upon one of them, prefeription cannot run againft the other during fuch poffefion.

Certain rights inca pable of preferip. tion.
15. Certain rights are incapable of prefcription: (r.) Things that law has exempted from commerce. (2.) Res merce facultatis, e. g. a faculty to charge a fubject with debts, to revoke, \&c. cannot be loft hy prefcription; for faculties may, by thcir nature, be exercifed at any time: hence, a proprietor's right of ufing any act of property on his own grounds, cannot be loft by the greateft length of time. (3.) Exceptions competent to a perfon for eliding an action, cannot prefcribe, unlefs the exception is founded on a right productive of an action, e. $g$. compenfation ; fuch right nuuf be infifted on within the years of prefcription. (t.) Obligations of yearly penfions or payments, though no demand has been made on them for 40 years, do not fuffer a total prefcription, but Aill fubfitt as to the arrears fallen due within that period; becaufe prefcription cannot run againft an obligation till it be payable, and each year's penfion or payment is confidered as a feparate debt.
16. No right can be loft non utendo by one, unlefs the effect of that prefeription be to eftablifh it in another. Hence the rule arifes, juri fanguinis nunquam frafcribitur. Herice alfo, a ptoprietor of land cannot lofe his property by the negative prefcription, unlefs he who objects it can himfelf plead the pofitive. On the fame ground, a fuperior's right of feu duties cannot be loft non utendo; becaufe, being inherent in the fuperiority, it is truly a right of lands that cannot fuffer the negative prefcription, except in favour of one who can plead the pofitive ; which the vaffal cannot do, being deflitute of a title. This rule applies alfo to parfonage tithes, which are an inherent burden
upon all lands not fpecially exempted; and from which therefore the perfon liable cannot prefcribe an immunity by bare non-payment: but fuch vicarage tithes as are only due where they aye elablifhed by ufage, may be loft hy prefeription. In all thefe cafes, though the radieal right cannot fuffer the negative prefcription, the bygone duties, not demanded within the 40 years, are loft to the proprietor, fuperior, or titular.
17. Prefcription may be interrupted by any deed Interrur whereby the proprietor or creditor ufes his right or feription ground of debt. In all interruptions, notice muft be given to the poffeffor of the fubject, or the debtor, that the proprietor or creditor intends to fue ирли his right. All writings whereby the debtor himfelf acknowledges the debt, and all proceffes for payment brought, or diligences ufed againlt him upon his obligation, by horning, inhibition, arreftment, $\exists_{c}$. mult be effectual to interrupt prefoription.
18. Interruptions, by citation upon libelled fummonfes, where they are not ufed by a minor, prefcribe, if not renewed every fcven years: but where the appearance of parties, or any judicial act has followed thereupon, it is no lenger a bare citation, but an action which fubfilts for 40 years. It has been found, that the fexennial prefeription of bills is not interrupted by a blank citation, as practifed in the court of admiralty. Citations for interrupting the prefcription of real rights mult be given by meffengers; and the fummonfes, on which fuch citations proceed, mult pafs the fignet upon the bill, and be regiltered within 60 days after the execution, in a particular regilter appointed for that purpofe: and where interruption of real rights is made via fual, an in thument mult be taken upon it, and recorded in the faid regitter; otherwife it can have no effect againlt fingular fucceffors.
19. Interruption has the effect to cut off the courfe of prefcription, fo that the perfon prefcribing can avail himfelf of no part of the former time, but muft begin a new courfe, commencing from the date of the interruption. Minority, therefore, is no proper interruption: for it neither breaks the courfe of preicription, nor is it a document or evidence taken by the minor on his right : it is a perfonal privilege competent to him, by which the opection of the prefcription is in. deed fufpended during the years of minority, which are therefore difcounted from it; but it continues to run after majoity, and the years before and after the minority may be conjoined to complete it. - The fame doctrine applies to the privilege arifing from one's incapacity to act.
20. Diligence ufed upon a debt, againft any one of two or more co-obligants, preferves the debt itfelf, and fo interrupts prefeription againft all of them ; except in the fpecial cafe of cautioners, who are not affected by any diligence ufed againt the principal debtor. In the fame manner, a right of annualrent, conffituted upon two feparate tenements, is preferved as to both from the negative prefcription, by diligence ufed againt either of then. But whether fuch diligence has alfo the effect to hinder the poffeffor of the other tenement by fingular titles from the benefit of the pofitive prefcription, may be doubted.

1II.
the cafe of heirs-portioners; and fucceffion in firpes, where the remoter heirs draw no more among them

## III. Of SUCCESSION.

## Sect. XX. Of fuccefion in heritabic righes.

Singular fucceffors are thofe who fucceed to a perfon yet alive, in a fpecial fubject bj fingular titles; but fucceffion, in its proper fenfe, is a method of tranfmitting rights from the dead to the living. Heritable rights defcend by fucceffion to the beir properly fo called; moveable rights to the executors, who are fometimes faid to be heirs in moveables. Succeffion is cither by feecial defination, which defeends to thofe named by the proprietor himfelf; or legal, which devolves upon the perfons whom the law marks out fer fucceffors, from a prefumption, that the proprietor would have named them had he made a deftination. The firft is in all cafes preferred to the other, as prefumption mutt yitld to truth.
2. In the fucceftion of heritage, the heirs at law are otlerwife called heirs general, heirs whatfoever, or heirs of line; and they fucceed by the rigbt of blood, in the following order. Firtt, defcendents; among thefe, fons are preferred to daughters, and the eldeft fon 10 all the younger. Where there are daughters only, they fucceed equally, and are called heirsportioners. Failing immediate defcendents, grandchildren fucceed; and in default of them, greatgrandchildren; and fo on in infunitum: preferring, as in the former cafe, males to females, and the eldett male to the younger.
iteral:。 3. Next after defcendents, collaterals fucceed; among whom the brothers gernun of the deceafed have the firit place. But as, in mo cafe, the legal fucceffion of heritage is, by the law of Scotland, divided into parts, unlefs where it defcends to females: the immediate younger brother of the deceafed excludes the rett, according to the rule, beritage defcends. Where the deceafed is himfelf the youngeft, the fuccefion goes to the immediate elder brother, as being the lealk deviation from this rule. If there are no brothers german, the fifters german fucceed equally : then brothers confanguinean, in the fame order as brothers german; and failing them, fitters confonguineon equally. Next, the father fucceeds. After him, his bothers and lifters, according to the rules already explained; then the grand-father ; failing him, his brothers and fifters; and fo upwards, as far back as propinquity can be proved. Though children fucceed to thcir mother, a mother cannot to her child; nor is there any fucceffion by our law through the mother of the deceafed ; in fo much that one brother uterine, i. c. by the mother only, cannot fucceed to another, even in that eftate which flowed originally from their common mother.
4. In heritage there is a right of reprofentution, by which one fucceeds, not from any title in l:imfelf, but in the place, and as reprefenting fome of his deceafed afcendents. Thus, where one leaves a younger fon, and a grandehild by his eldet, the grarcchild, though farther removed in degree from the deceafed than his uncle, excludes him, as coming in place of his father the eldeft fon. Hence arifes the diftinction between fucceffion in capita, where the divifion is made into as many equal patts as there are capita or heirs, which is
than the fhare belonging to their afcendent or firps, whom they reprefent; an example of which may be figured in the cafc of one who leaves behind him a daughter alive, and two grand-darghters by a daughter deceafed. In which cafe the two grand dlanghters would fucceed cqually to that half which would have belonged to their mother had the been alive.
5. In the fucceffion of hieirs portioners, indivifible Succeffion rights, e. g. titles of dignity, fall to the eldell filler. of herrs A fingle right of fuperiority gres alfo to the eldeft; ${ }^{\text {ortioners: }}$ for it hardly admits a divifion, and the condition of the vaffal ought not to be made worfe by multiplying fuperiors upon him. Where there are more fuch rights, the eldeft may perhaps have her election of the beft; but the younger fifters are intitled to a recompence, in fo far as the divifions are unequal ; at leatt, where the fuperiorities yield a conttant yearly rent. The principal feat of the family falls to the eldeft, with the garden and orchard belonging to it, without recompence to the younger filters; but all other houles are divided among!t them, toyether with the lands on which they are built, as parts and pertinents of thefe lands. A pracipuum, however, is due only in the cafe of fucceefion of heirs portioners $a b$ intefato; and therefore there is no place for it where the fucceflion is taken under a deed.
6. Thofe heritable rights, to which the deceafed did Heir of himfelf fucceed as heir to his father or other ancettor, cooquen. get fometimes the name of heritage in a Atrict fenfe, in oppofition to the fcuda nova, or feus of conquef, which hic had acquired by fingular titles, and which defcend, not to his heir of line, but of conquef. This dititinction obtains only where two or macre brothers or uncles, or their iffue, are next in fucceffion; in which cafe, the immediate you:ger brother, as heir of line, fucceeds to the proper heritage, becaufe that defcends; whereas the conqueft afcends to the immediate elder brother. It has no place in female fucceffion, which the law divides equally among the heirs-portioners. Where the deceafed was the younger brother, the immediat elder brother is heir both of line and of conqueft. An eftate difponed by a father to his eldeft fon, is no: conqueft in the fon's perfon, but heritage; becaufe the fon wonld have fucceeded to it, though there had been no difpufition. The heir of conquell fucceeds to all rights af fecting land, which require feifin to perfect thens But teinds go to the heir of line; hecaufe they are mere!y a burden on the fruits, not on the land. Tacks do not fall under conqueft, becaufe they are complete rights without feifin ; nor perfonal bonds taken to heirs fecluding executors.
7. The heir of line is intilled to the fucceffion, not only of fubjects properly heritable, but to that fort fnuveabices. moveables called leir/bip, which is the beft of certain kinds. This coctrine has been probably introduced, that the heir might not have an houfe and ffate to fuccred to, quite difmantled by the executor. In that fort which goes by pairs or dozens, the beft pair or dozen is the heirthip. There is no hairfhip in fungibles, or things eftimated by quantity; as grain, hay, current money, \&c. To intitle an heir to this privilege, the deceafed mult have been either, (1.) A prelate: (2.) A baron,
baron, io e. who food infeft at his death in lands, the' not erteted into a barony; or even in a right of annualrent: Or, (3.) A burgefs ; not an honorary one, but a trading burgefs of a royal borsugh, or at leaft one intitled to enter burgefs in the right of this anceftor. Neither the heir of conqueft, nor of tailzie, has right to heirfaip-moveables.
8. As to fucceffion by deftination, no proprietor can fetile any heritable eftate, in the proper form of a teftament ; not even bonds fecluding executors, thu' thefe are not heritable ex fua natura: But, where a teftament is in pait drawn up in the ilyle of a deed inter wizos, fueh part of it may contain a fettement of heritage, thongh csecutors fhould be named in the teltamentary part. The common method of fettling the fucceflion of heritage is by difpelition, contract of marriage, or fimple procuratory of refignation: and, thu' a difpofition futting heritage fhould have neither precept nor procuratory, it founds an action a sainf the heir of line to complete his tules to the eftate ; and thereafter diveft himfelf in favour of the difponee. The appellation of tailzie, or entail, is chichly ufed io the cafe of a land eltate, which is fettled on a long ferics of heirs fubtituted one after another. The perfou firft called in the tailzie, is the inftitute; the reth, the heirs of tailzie, or the fubllitutes.
9. Tailzies, when ennfidered in relation to their feveral degrecs of foree, are cither, (t.) Simple dettinations: (z.) Tailzies with prohibitory claules. (3.) 'railzies with prohibitory, refolutive, and irritant clauSes. That is a fimple dettination, where the perfons called to the fincceffion are fubitituted one after another, without any reftraint laid on the exercife of their property. The heirs, thet-fore, fucceeding to fuch ettate, are abdolute diars, and confequently may alter the deflination at pleafure.
10. In tailzits with claufes prohibitory, c. ${ }^{\text {re }}$. decharing that it fhall not be lawful to the heirs to contract debes or alien the lands in prejudice of the fucceffion, sone of the heirs can alien gratuitoufly. But the members of entail may contract debts which will be effectual to the creditors, or may difpofe of the ctlate for merous caufes. In both thefe forts, the maker himfelf may alter the tailzie; except, (t.) Where it has been granted for an oncrous caufe, as in mutual tailzies; or (2.) Where the maker is exprefsly difabled, as well as the inftitute or the heis.
11. Where a tailzie is guarded with ir ritant and refolutive claufes, the eftate entailed cannet be carried off by the debt, or deed, of any of the heirs fucceeding thereto, in prejudice of the fuhtitutes. It was long doubted, whether fuch tailzies ought to be effectual, even where the fuperior's coufent was adhibited; becauf they funk the property of ctlates, and created a perpetuity of liferents. They were firt explicitly aitthorifed by $1685, c^{2} 22$. By this ftatite, the entail mult be regillered in a frecial regiter ellablifhed for that purpofe; and the irritant and refolutive claufes muft be inferted, not only in the procuratorics, precepts, and feifins, by which the tailzies ate fort conftituted, but in all the after conveyances thereof; otherwife they can have no force againit lingular fueceffors. But a tailzie, even without thefc requilites, is effectual againft the heir of the granter, or againlt the inftitute who accepts of it. It has been found, that an eatail,
tho' comp!eted by infefment before the act r E85, was incffectual, hecanfe not recorded in terms of the act.
12. An heir of entail has full prower over the en. tailed eftate, except in fo far as he is exprefsly fettered; and as entails are an unfavouratle reftaint upon pro. perty, and a frequent finare to trading people, they are ponil, the firicifimi juris: fo that no prohibition or irritancies reftidion are to be inferred by implication. By 10 George III. c. 5 t . beirs of entail are intited (notwithftanding any reftrictions in the deed of eutail) to inprove their eltates by granting leafes, building farm-houfes, draining, inclufing, and excambing, under certain limitations, and to claim repayment of three-fourths of the expence from the next heir of entail. - This aet extends to ali tailzics, whether made prior or pultesios to the 1685 .
13. An heir, who counteracts the directions of the Contraver tailzic, by aliening any part of the ellate, charging it tom, by with debt, icc. is faid to contravene. It is not the whom 2 fumple contracting of debt that infers contravention; the lands entailed mult be actually adjudged upon the debt contracted. An heir may, where he is net cxpretsly barred, fettle rational provifons on his wife and children, witheut incurring contraveution. It is not quite clear whetber the heirs alfo of the contravener would forfeit their right from the acts or deeds of their predeceffor where there is no exprefs claufe in the entail fettling it; and thon; (which declares, that catails executed according to the directions of it, thall be effectual not only againil the eontravener and his heirs, but againt creditors), may feen to favour the idea that heirs alfo would forfeit, the more favourable opinion has received the fanctiou of our fupreme court. For the greater fecurity, however, a claufe is now ufually inferted in taikies, declaring, that the contravention of the heir in poffelfion Thall wot atfect his defcendents, when fuch is the instention of the granter.
14. When the heire of the faft perfon fpecially cal- In what led in a tailzie conse to fueceed, the irritancies have no cales an longer any perfon in faveur of whom they can operate; heir and confequently, the fee, which was before tailzied, becomes dimple and unlimited in the perfon of fuch heirs. By the late act zoth Geo. Il. for abolifhing wardholdings, the kiug may purchafe lands within Scotland, notwithftandug the tricteft entail; and where the lands are in the hands of minors or fatuon perfons, his majelly may purchafe them from the curators or guardians. Aod beirs of entail may fell to their vaflals the fuperiorities belonging to the entuilcdedlate; but in all thefe caf:6, the price is to be futlod in the fame matner that the lands or faperiuritics fold were fettled before the fale.
15. Rights, not ouly of land-eftates, but of bonds, Rights are dometumes granted to two or zoore perfons in con- taken in junct fee. Where a right is fo granted to two ttran. conjuid gers, without any fpccial claufe adjec.ed to it, each of fe the on has an equal interell in the tee, and the part of the deceafed defcends to his own herr. If the right be taken to the twa jointly, and the lonsefl livir and their heis, the feeral fhares of the coujunci bans are afiectable by their creditors duning their lives: but, on the death of any one of them, the furvivor lias the fee of the whole, in fo far as the fhare of the predeceafed remains frec, after payment of his debts. Where the right is taken to the two in conjunct fee, and to the
of heirs of one of them, he to whofe heirs the right is tamad. ken is the only fiar; the right of the other refolves into a timple liferent : yet where a father takes a right to himfelf and hits $f \mathrm{~m}$ jointly, and to the fon's hairs, fuch right beiog gratuitous, is not undertood to 1trip the father of the fee, unlefs a contrary intention fhall plainly appear from the tenor of the right.
16. Where a right is takin to a huiband and wife, in eonjanct fee and liferen', the hubanu, as the perfuala dignior, is the only fiar: the wife's right refolves intu a liferent, unk fs it be prefumable, from fpecial circum. ftances, that the fee was intended to the in the wife. Where a right of moveahles is taken to hufoand and wife, the heirs of both fuceeed equally, aecording to the ratural meaning of the words.
17. Hieirs of previfion are thofe who fucceed to any fulbeet, in virtue of a provifion in the inveliture, or other deed of fettement. This appellation is given molt commonly to heirs of a marriage. Thefe are more fa. vourably regarded than heirs by fimple deltination, who have only the hope of fuccetfioa; for heirs of a mariage, beeaufe their provilions are conntituted by an onerous contract, cannot be difappoinied of them by any. gratuitous deed of the father. Neverthelefs, as their right is only a right of fuceeflion, which is not defigned to reftrain the father from granting onerous or rational deeds, he continues to have the full power of felling the fubject, or charging it with debts, unlefs a proper 1 ight of credit be given to the beir by the marriage eontract. $\epsilon g$. if the father flould oblige himfelf to infeft the heir in the lands, or make payment of the fum provided againtt a day certain, or when the child attainis a certain age, \&ic. ; for fuch rights, when perfected by infeftment, or feeured by diligence, are effegual againtt all the potterior deeds of the father, even onerous.
18. Thongh all provifions to children, by a marion to riage contract conceived in the ordinary form, being en. merely rights of fueceffion, are potponed to every onerous debt of the granter, even to thofe contracted poAterior to the provilions; $y$ tt where a father executes a bond of provifion to a ehild actually exilting, whether fuel ehild be the heir of a marriage or not, a proper debt is thereby created, which, thought it be without doubt gratuitous, is not only effectual againft the father hinfelf and bis heirs, but is not redacible at the inttance even of his frior onerous creditors, if he was foivent at the time of granting it. A father may, notwithitanding a firil marriagt-contrait, fethe a jointure on a feeond wife, or provide the ehildren of a feeond marriage; for fuch fetilenients are deemued onerous ; but where they are texrbitant, they wili te reftricted to what is rational: and in all fuch fettements, where the provifions of the firt marriaze.conitract are incyoached upon, the heirs of that marviage have recourfe agdint the father, in cafe be flonld aterwards aequire a feparate ellate, which may enable him to fultil both obligations.
19. In marriage contracts, the conquer, or a certain part of it, is frequently provided to the iffue; by which is underltood whatever real addition fhall be made to the father's clate during the marriage by purelafe or donation. Conqueft therefore mult be tree, i. $e$, what remains after payment of debts due by the father. As in other provitions, fo in conquelt ; the father is ttill
firr, and may therefore difpofe of it for onerous or rational eaufes. Where heritable rights are provided to the beirs of a marriage, they fall to the eldeff fon, for he is the heir at lave in heritage. Where a fum of money is fo provided, the word beir is applied to the fubj:ct of the provifion, and to marks out the executor, who is the heir in moveables. When an heritable right is pros To bairn vided to the lairns (or ifliue) of a mirriage, it is divided equaily amous the children, if no divition be made by the father; for fuch deftination eues off the exelufive right of the legal heir. No provition granted to bairns, gives a fpesial right of credit to any one child, as lonfo as the father lives: the right is granted familia; fo that the whole malt indeed go to one or other of them ; but the father has a power inherent in him, to divije it among them, in fuch proportions as he thinks bell, yer fu as none of them may be entirely excluded, cxcept in extraordinary cales.
20. A claufe of return is that, by which a fum in a claure os, bond or other right, is in a certain event limited to return to the granter himfelf, or his heiss. When a right is granted for onerous eaufes, the creditor may defeat the claufe of return, even gratuitondy. But, where the fum in the right flows from the granter, or where there is any other reafonable caule for the provilion of return in his favour, the receiver cannot difappoint it gratuitoully. Yet fince he is fiar, the fum may be either affigned by him for an onerous caufe, or affected by his creditors.
2I. An heir is, in the judgment of law, eadem per. Heirs. fona cumn defuncio, and fo reprefents the deecafed univerfally, not only in his rights, but in his debts : in the firt view, he is faid to be heir azivè; in the fecond, pafivi. From this general rule are excepted, heirs fubhiunicd in a fpecial bond, and even fubllituted in a difpofition omnium boncrum, to take effect at the granter's death; for fuch fubititutes are confidered as fingular fuceeffors, and their right as an univerfall legaey, which does not fubject the legatee ultra velorein, but heirs male or of tailzie, though their right be limited to fpecial fubjects, are liable, not merely to the extent of the fubject ent tailed or provided, but in folidam; beeaufe fuch rights are defigned to carry an univerfal character, and fo infer an univerfal reprefentation of the granter. The heir of line is primarily liable for the debts of his predeceffor; for he is the molt proper heir, and io mult be difcuffed before any other can be purfued; next to him the heir of conqueft, beeanfe he alfo fucceeds to the univeriflus of the whlule heritable rights which his predeceflor had acquired by fingular tities; then, the heir male, or of a marriage; for their propinguity of blood fubjects them mere directly than any obler heir of talzie, who may polibly be a ttranger; and who for that reafon is not lable to be difcufted, except for fuch of the predeceffor's delots or deeds as relate fpecially to the lands cailzied; as to whieh he is liable even before the heir of line. Heirs portioners are liable pre rata for their predeceflors debts; but if any of them prove infolvent, the creditor may, after difcufing her, infilt for her fhare againft the reft, who will be liable in fo far as they are lucrata by the fueceffion. Where an heir, liable fialfidiare, pays the predeceffor's debt, he has relief agdint the heir who is more directly liable, in refpect of whom he is not co-heir, but creditor.

22. Fefore an heir can have an ative title to bis auceftor's rights, he mult be entered by fervice and retour. He who is intitled to enter heir, is, before his atual entry, called apparent beir. The bare right of apparency carries certain privileges with it. An apparent heir may defend his anceftor's titles againt any third party w'lo brings them under challenge. Tenants may fafely pay him their rents; and after they have once acknowledged him by payment, he may conmel them to continue it ; and the rents not uplifted by the apparent heir belong to his executors, upon his death.
23. As an heir is, by his entry, fubjected univerfally to his anceftor's debts, apparent heirs lave therefore a year (amius cliliberandi) allowed to them from the ancettor's deceafe, to deliberate whether they will enter or not ; till the expiry of which, though they may be charged by creditors to enter, they cannot be fued in any procefs founded upon fuch charge. Though declaratory actions, and others which contain no perfonal conclufion, may be purfued againt the apparent heir, without a previous charge; action does not lie even upon thefe, within the year, if the heir cannot nake the proper defences without incurring a palfive title. But judicial fales, conmenced againft an anceftor, may by fpecial act of federunt be continued upon a citation of the heir, without waiting the year of deliherating. This annus illiberandi is computed, in the cafe of a pothumous heir, from the birth of fueh heir. An apparent heir, who, by immixing with the eftate of his anceftor, is as much fubjected to his debts as if he had entered, can have no longer a right to deliberate whether he will enter or not.
Service of
teirs,
24. All fervices proced on brieves from the chancery, which are called brieves of ingue $\ell$, and have been long known in Scotland. The judge, to whom the brief is directed, is required to try the matter by an inquert of 15 fworn men. The inqueft, if they find the claim verified, muft declare the claimant heir to the deceafed, by a verdict or fervice, which the judge mun atteft, and return the brief, with the fervice proceeding on it, to the chancery; from which all extract is obtained called the retour of the fervice.
general and
feccial.

Entry by
inventory. 25. The fervice of heirs is either gencral or fpecial. A general fervice velts the heir in the right of all beritable fubjects, which either do not require feifin, or which have not been perfected by feifin in the perfon of the anceftor. A public right, therefore, according to the feudal law, though followed by Ceifn, having no legal effects till it be confirmed by the fuperior, muft, as a perfonal right, be carried by a general fervice. A fpecial fervice, followed by feifin, vefts the heir in the right of the fpecial fubjects in which the anceftor died infeft.
26. If an heir, doubtful whether the eftate of his anceftor be fufficient for clearing his debts, flall, at any
that purpofe, his fubfequent eatry will fubject hisa no farther than to the value of fuch inventory. If the in. ventory be given up and regiftered within the time prefcribed, the heir may ferve on it, even after the year.
27. Creditors are not obliged to acquiefce in the value of the eftate given up by the heir; but, if they be real creditors, may bring the eftate to a public fale, in order to difcover its true value; fince an eftate is always worth what can be got for it. An heir by inventory, as he is in effect a truttee for the creditors, mult account for that value to which the eftate may have been improved fince the death of the anceltor, and he muft communicate to all the creditors the eafes be has got in tranfacting with any one of them.
28. Practice has introduced an anomalous fort of Entry $u$ entry, without the interpofition of an inquelt, by the a precep fole confent of the fuperior; who, if he be fatisfied that clare conthe perfon applying to him is the next heir, grants ${ }^{\text {fut. }}$ him a precept (called of clare conflat, from the firft words of its recital), commanding his bailie to infeft him in the fubjects that belonged to his anceftor. The heir, by taking feifin on this precept, becomes pafivi, liable for all the debts of his anceftor; and on the other hand, acquires an active title, as to the fubjects contained in the precept in queftions with the fuperior or his heirs ; and they may, when followed by feifin, afford a title of prefcription : But as no perfon can be declared an heir by private autbority, they cannot bar the true heir from entering after 20 years, as a legal entry would have done; the true heir, in fuch cafe, having it fill in his power to fet afide that right, and obtain himelf regularly ferved at any time within the years of prefeription. Of the fame nature is the entry by liafp aud flaple, commonly ufed in burgage tenements of houfes; by which the bailie, without calling an inqueft, cognofes or declares a perfon heir, upon evidence hrought before hirifelf; and, at the fame time infefts him in the fubject, by the fymbol of the hafp and faple of the door. Charges given by creditors to apparent heirs to enter, ftand in the place of an actual entry, fo as to fupport the creditor's diligence (clxxii. 2.).
29. A general fervice cannot include a fpecial one ; Arpecial fince it has no relation to any fpecial fubject, and car-cludes a; ries ouly that clafs of rights on which Eevifin has nut neral ons proceeded ; but a fpecial fervice implies a general one of the fame kind or character, and confequently carries even fuch rights as have not been perfected by feilin. Service is not required to eltablifh the heir's right in titles of honour, or offices of the highelt dignity ; for thefe defcend jure fanguinis.
30. An heir, by immixing with his anceftor's eflate Paffive without entry, fubjects himbelf to his debts, as if he titles. had entered; or, in our law-phrafe, incurs a paffive title. The only paffive title by which an apparent heir becomes liable univerfally for all his ancellor's debts, is gefio pro berede, or his behaving as none but an heir Gefio pr has right to do. Behaviour as heir is inferred from berade. the apparent heir's intromiffion, after the death of the anceftor, with any part of the lands or other heritable fubjects belonging to the deceafed, to which he limfelf might have completed an active title by entry.
31. This paffive title is excluded, if the heir's intromifion be by order of law; or if it be founded on

$$
fingular titles, and not as heir to the deceafed. Bat an apparent heir's purchafing any right to his anceftor's eftate, ot herwife than at public roup (auction), or his poffefing it in virtue of rights fetted in the perfon of any near relation of the anceftor, to whom he himfelf ir ay fucceed as heir, otherwife than upon purchafe by public fale, is deemed beharinur as heir.
32. Behaviour as heir is alfo excluded, where the intromifion is fmall, unlefo an intention to defraud the anceftor's creditors be prefumable from the circunflances attending it. Neither is behaviour inferred againt the apparent heir, fiom the payment of his anceftor's debt, which is a roluntary act, and profitable to the creditors : nor by his taking out of brieves to ferve; for one may alter his purpofe, while it is not completed: nor by his affuming the titles of honour belonging to his anceftor, or exercifing an honorary office hereditary in the family; for thefe are rights annexed to the blood, which may be ufed without proper reprefentation. But the exercifing an heritable office of profit, which may pals by voluntary converance, and confequently is adjudgeable, may reafonably be thought to infer a paffive title. Lafly, as paffive titles have been introduced, merely for the fecurity of creditors; therefore, where queftions concerning behaviour arife among the diferent orders of heirs, they are liable to one another no farther than in valorem of their feveral intromifions.
33. Another paffive title in heritage, may be incurred by the apparent heir's accepting a gratuitous right from the anceltor, to any part of the eftate to which he himfelf might have fucceeded as heir ; and it is called preceptio bereditatis, becaufe it is a taking of the fucceftion by the heir before it opens to him by the death of his anceltor. If the right be onerous, there is no paffive title; if tbe confideration paid for it does not amount to its full value, the creditors of the deceafed may reduce it, in fo far as it is gratuitous, but fill it infers no paffive title.
34. The heir incurring this paffive title is no farther liable, than if he had at the time of his acceptance entered heir to the granter, and fo fubjected himfelf to the debs that were then chargeable againfl him; but with the pofterior debts he has nothing to do, not even with thofe contratied between the date of the right and the infeftment taken upon it, and he is therefore called fucceffor titulo lucrativo Pof contra8um debitum.
35. Neither of thefe paffive titles takes place. unlefs the fubject intermeddled with or difponed be fuch as the intromitter or receiver would fucceed to as heir. In this alfo, thefe two palive titles agree, that the intromiffion in both mu? be after the death of the anceflor ; for there can be no termini babites of a paffive title, while the anceftor is alive. But in the following refpect they differ: Gefito pro berede, being a vicious pafinve title founded upon a quafi delict, cannot be objecied againt the delinquent's heir, if procefs has not been litifcontelted while the delinquent himfelf was alive; whereas the fucceffor titulo lucrativo is by the acceptance of the difpofition undertood to have entered into a tacit contract with the granter's creclitors, by which he undertakes the burden of their debts; and all actions founded on contract are tranfmifible againft heirs.

Vol. IX. Part II.

36. An apparent heir, who is cited by the anceltor's creditor in a procefs for payment, if he offers any peremptory defence againt the debt, incurs a paffive
 , for he can have no intereft to object againft it, five tities. but in the character of heir. In the fame manner, the heir's not renouncing upon a clarge to cnter heir, infers it: But the effect of both thefe is limite 1 to the fpecial debt purfued for, or charged upon. This paffive title, which is inferred from the heir's not renouncing, has no effect till decree pals againfthim; and even a renunciation offered after decree, if the decree be in abfence, will intitle the heir to a fufpenfion of all diligence againt his perfon and eflate, competent upon his anceltor's debts.
37. By the principles of the feudal law, an heir, when he is to complete his titles by fpecial fervice, muff neceffarily pafs over his immediate anceftor, e. g. his father, if he was not infeft; and ferve heir to that anceflor wbo was laft reft and feifed in the right. ant in whofe bareditas jacens the right muft renain, till a title be connected thereto from him. As this bore hard upon creditors who might think themfelves fecure in contracting with a perfon whom they faw for fome time in the poffefion of an eftate, and from thence concluded that it was legally vefted in him; it is therefore provided by act 1695, that every perfon, paffing over his immediate anceflur who had been three years in poffeflion, and ferving heir to one more remote, fhall be liable for the debts and deeds of the perfon interjected, to the value of the eftaie to which he is ferred. This being correctory of the feudal maxims, has been ftrictly interpreted, fo as not to extend to the gratuitous deeds of the perfon interjected, nor to the care where the interjected perfon was a naked fiar, and poffeffed only civilly through the liferenter.
38. Our law, from its jualoufy of the weaknefs of Reduction mankind while under ficknefs, and of the importunity by the heir of friends on that occafion, has declared that all dreds texatite affecting heritage, if they be granted by a perfon on deathbed, (i. e. after contracting that ficknefs which ends in death), to the damage of the heir, are ineffectual, except where the debts of the granter have laid him under a neceffity to alien his lands. As this law of deathbed is founded foldy in the privilege of the heir, deathbed-deeds, when confented to by the heir, are not reducible. The term properly oppofed to deathbed is liege pouflic, by which is underliood a ftate of health; and it gets the name, beraufe perfons in. health have the legitima poteflas, or lawful power, of difpofing of their property at pleafure.
39. The two extremes being proved. of the granter's What cos ${ }^{2}$ ficknefs immedianely before figning, and of his death $n$ ioutes a following it, though at the greateft diftance of time, death-bed did, by our former law, found a prefumption that the deed was granted on deathbed, which could not have been clided but by a pofitive proof of the granter's convalefcence; hut now the ailegation of deathbed is alfo excluded, by his having lived 60 days after figning the deed. "The legal evidence of convalefcence is the granter's having been, ifter the date of the deed, at kirk $O R$ market unfupported; for a proof of either will fecure the deed from challenge. The going to kirk or market mult be performed when the people are met together in the church or churchyard for any public meeting, civil or ecclefiallical, or in the mar-
ket-place at the time of public market. No other proof of convaleleence is receivable, becaufe at kirk and market there are always prefent unfufpected witneffes, which we can hardly be fure of in any other cafe.
40. The privilege of fetting afide deeds ex cajpite legi, is competent to all heirs, not to heirs of line only, but of conqueft, tailzie, or provifion ; not only to the immediate, but to remoter heirs, as foorr as the fucceffion opens to them. But, where it is confented to or ratified by the immediate heir, it is fecured againft all challenge, even from the remoter. Yet the immediate heir cannot, by any antccedent writing, renounce his right of reduction, and thereby give ftreugth to deeds that may be afterwards granted in leat to his hurt ; for no private renunciation can authorife a perfon to act contrary to a public law; and fuelı renunciation is prefumed to be extorted through the fear of exheredation. If the heir fhould not ufe this privilege of reduction, his creditor may, by adjudication, transfer it to himfelf; or he may, without adjudication, reduce the deed, libelling upon his intereft as creditor to the heir: But the granter's ereditors have no right to this privilege, in regard that the law of deathbed was introduced, not in behalf of the granter himfelf, but of his heir.

What rights m-y be thus fet adide.
41. The law of deathbed ftikes againt difpofitions of every fubject to wbich the heir would have fucceeded, or from which he would have had any benefit, had it not been fo difponec. Deathbed-deeds granted in confequence of a full or proper obligation in liege pou. Pie, are not fubject to reduction; but, where the antecedent obligation is mertly natural, they are reducible. By ftronger reafon, the deceafed cannot, by a deed merely voluntaly, alter the nature of his eftate on deathbed to thic prejudice of his heir, fo as from heritable to make it inoveable; but if he flould, in liege pouflie, exelude his apparent heir, by an irrcvocable deed containing referved faculcies, the heir cannot be heard to quarrel the exercife of there faculties on death bed.
42. In a competition between the creditors of the deceafed and of the heir, our law (act 1661) has juitly pieferred the creditors of the deceafed, as every man's eftate ought to be liable, in the firft place, for his own deht. But this preference is, by the ftatute, limited to the cafe where the creditors of the deceafed have whed diligence againft their debtor's eftate, within three years from his death; and therefore the heir's creditors may, after that period, afiect it for their own payment. All difyofitions by an heir, of the anceftor's eftate, within a year after his death, are null, in fo far as they are hustful to the creditors of the anceftor 'This takes place, though thefe ercditors fould have ufed no diligence, and even where the difpofitions are granted after the year: It is thought they are ineffectual againk the creditors of the deceafed who have ufed diligence within the three years.
claxxj.

## Sict. XXI. Of Succefion in Movcables.

INoveable rucceffion ty law.

In the fucceffion of moveable rights, it is an univerfal rule, that the next in degree to the dectafed (or next of kin) fucceeds to the whole; and if there are two or morc equally near, all of them fuceed by equal parts, without that prerogative, which takes place in
heritage, of the eldeft fon over the younger, or of males over females. Neither does the right of reprefentation (explained $n^{\circ}$ clxxx. 4.) obtain in the fucceffion of moveables, except in the fingle cafe of a competition between the full blood and the half blood; for a nicce by the full blood will be preferred before a brother by the half blood, tlinugh fhe is by one degree more remote from the deceafed than her uncle. Where the eftate of a perfon deceafed confills partly of heritage, and partly of moveables, the heir in the heritage las no thare of the moveables, if there are others as near in degree to the deceafcd as himfelf: But where the heir, in fuch cafe, finds it his intereft to renounce his exclulive clain to the heritage, and betake himflf to his right as one of the next of kin, he may collate or communieate the heritage with the others, who in their turn mult collate the moveables with him ; fo that the whole is thrown into one mals, and divided equally among all of them. This doctrine holds, not only in the line of defcendants, but of collaterals; for it was introduced, that the heir might in no cafe be worfe than the other next of kin.
2. One may fettle his moveable eflate upon whom he Succeffion pleafes, excluding the legal fueceffor, by a teflament; mon move. which is a written decleration of what a perfon wills to ablen hy be done with his moveable eftate after his death. No fination. teftamentary deed is effectual till the death of the teflatur; who may therefore revoke it at pleafure, or make a new one, by which the firf lofes its force, according to the rule, voluntas tefatoris $f$ f ambulatoria ufque ad mor-tem; and hence teftaments are called laft or latter wuills. Teflaments, in their frict acceptation, mull coritain a nomination of exccutors, i. e. of perfons appointed to adminifter the fueceffion according to the will of the decealed: Yet nothing hinders one from making a fettlement of moveables, in favour of an miverfal legatee, though he flould not have appointed executors; and on the other part, a tefiament wherc executors are appointed is valid, though the perfon who is to have the right of fueceffion fhould not be named. In this 1 l cafe, if the exceutor nominated be a ftranger, i.e. one who has no legal interef in the moveable ellate, he is mcrely a truftee, aceountable to the next (f kin; but he may retain a third of the dead's part (explained par. 6.) for lis trouble in execuring the teflament; in payment of which, legaeies, if any be left to him, mult be imputed. The heir, if he be named executor, has right to the third as a franger; but if one be named who lias an interell in the legal fucceffion, he bas no allowance, unlefs fuch intertt be lefs than a third. Nuncupative or verbal teflaments are not, by the law of Seotland, effectual for fupporting the nomination of an executor, let the frabject of the fucceffion be ever fo fmall: But verbal legacies, not exceeding L. 100 Scots, are fuftained: and even where they are granted for more, they are ineffectual only as to the excefo.
3. A legacy is a donation by the decealed, to be Legat? paid by the exceutor to the legatee. It may be granted either in the teltament or in a feparate writing. Legacies are not due till the granter's death; and confequently they can tranfmit no right to the executors of the legatee, in the event that the granter furvives him. A cafe occurred fome years ago, where a teftator left a legacy payable coben the legatee arrived at a certain age. The legatee furvived the tefta-

Law of tor, but died before the legacy was payable. It was colland. found, chiefly upon the authority of the Roman law, that the legacy vefted in the legatee a morte teflatoris, and upon his deccafe was due to the legratee's next of kin.
4. Legacies, where they are gencral, i.e. of a certain fum of money indefinitely, give the legatee no right in any one debt or fubject; he can only infilt in a perfonal action againlt the exccutor, for payment out of the tellator's effers. A fpecial legacy, i.e. of a particular dubt due to the deccafed, or of a particular fubject belonging to him, is of the nature of an afug. nation, by which the property of the fpecial debt or fubject velts, upon the teftatur's death, in the legatee, who can therefore directiy fue the debtor or poffeffor: Yet as no legacy can be claimed tiil the debla are pait, the executor malt be cited in fuch procefs, that it may be known, whether there are free effe:ts fufficient for anfwering the legacy. Where there is not enough for payment of all the legacies, each of the general legatees mult fuffer a proportional abatement : But a fpecial legatee gets his legacy entire, tbough there fhould be nothing over fur payment of the reft; and, on the contrary, he bas no claim, if the debt or fubject bequeathed fhould perifh, whatever the extent of the free executry may be.
5. Minors, after puberty, can teft without their curators, wives without their hufands, and-perfons interdicted without their interdictors: but baltards camnot teft, except in the cafes afterwards fet forth, $\mathrm{N}^{\circ}$ clxxii. 3. As a certain fhare of the goods, falling under the communion that is confequent on marriage, belongs, upon the hufband's deceafe, to his widow, jure relicte, and a certain thare to the children, called the legitine, portion natural, or bairns part of gear; one whoo lias a wife or children, though be be the abfolute adminitrator of all thefe goods during his life, and confequently may alien them by a deed inter vivos, in liege poyflie, even gratuitoufy, if no fraudulent intention to difappoint the wife or children fhall appear, yet cannot impair their fhares gratuitoully on death-bed; nor can he difpofe of his moveables to their prcjudice by teltament, though it flould be made in liege pouftie; fince teftaments do not operate till the death of the teflator, at which period the divilion of the goods in communion have their full effect in favour of the widow and chitdren.
6. If a perfon deceafed leaves a widow, but no child, his teftament, or, in other words, the goods in communion, divide in two : one half goes to the widow; the other is the dead's part, i.e. the abfolute property of the deceafed, on which he can teft, and waich falls to his next of kin, if he dies inteltate. Where he leaves children, one or more, but no widuw, the children get one half as their legitime : the other half is the dead's patt; which falls alfo to the children, if the father has not tefted upon it. If he leaves both widow and children, the divifion is tripartite : the wife takes one third by herfelf; another falls, as"legitime, to the children equally anong them, or even to an only child, though he flould fuceetd to the heritage; the remaining third is the dead's part. Where the wife predeceales without children, one toif is retaind by the hufoand, the other falls to her 11ex: of: : Wh:tre the leaves children, the divifion ought alfo to is bipartite, by the common
rules of fociety, lince no legitime is truly due un a tro. ther's death : yet it is in practice tripartite; two thirds remain with the furviving father, is if one third were due to him froprio nomine, and another as adminiftiator of the legitime for his children; the remaining third, being the wife's flare, goes to her children, third, being the wife's flare, goes to her children,
whether of thit or any former marriagc ; for they are all equally her next of kin.
7. Before a teltament can be divided, the debes ow. What dehea
ing by the deceafed are to be deducted; for all execu- affect the
try mult be fiee. As the haftand has the full power of exceury.
ing by the deceafed are to be deducted; for all execu- affect the
try mutt be fiee. As the hafband has the full power of exculry. burdening the goods in cominunion, his debts affect the whole, and folcten the legitine and the flare of the relict, as well as the dead's part. His funeral charges, and the mournings and alimony due to the widow, are and the mournings and alimony due to the widow, are
confidered as his proper debts; but the legacies, or other graiuitous rights granted by him on death-bed, affect only the dead's part. Bonds bearing intereft,
due by the dsceafed, cannot dimiuifa the relict's fhare, affect only the dead's part. Bonds bearing intereft,
due by the deceafed, cannot dimiuifa the relict's fhare, becaule fucl bonds, when due to the deceafed, do not increafe it. The funeral charges of the wife predeceafing, fall wholly on her executors who have right to ceafing, fall wholly on her executors who have right to
her flate. Where the deceafed leaves no family, neither hufband, wife, nor child, the teftament fuffers no divifion, but all is the dead's part.
8. The whole iffue of the liufand, not only by that marriage which was diffolved by his death, but by any former marriage, has an equal interef in the legitime; otherwife the children of the firl marriage would be cut out, as they could not claim the legitime during their father's life. But no legitime is due, (1.) Upon the death of a mother. (2.) Neither is it duc to grandchildren, upon the death of a grandfather. Nor, (3.) To children furisfamiliated, i. e. to fuch as, by having renounced the legiiime, are no longer confidered as ing
familia, and fo are excluded from any farther hare of renounced the legiime, are no longer confidered as in
familia, and fo are excluded from any farther hare of the moveable eflate than they have already received.
9. As the right of legitime is ftrongly founded in Renencia nature, the renunciation of it is not to be inferred by teno of the
implication. Renunciation by a child of his claim of legitime. implication. Renunciation by a child of his claim of legitime. implication. Renunciation by a child of his claim of legume.
legitime has the fame effect as his death, in favour of the other children intitled thereto; and confequently the fhare of the renouncer divides among the reit; bot he does not thereby lofe his right to the dead's part, if hic does not alfo renounce his hare in the father's exe-
cutry. Nay, his renunciation of the legitime, where hic does not alfo renounce his hare in the father's exe-
cutry: Nay, his renunciation of the legitime, where he is the only younger child, has the effect to convert
the whole fubject thereof into dead's part, which will The is the only younger chald, has the effect to convert therefore fall to the renouncer himfelf as next of kin, if the heir be not willing to collate the heritage with him. Yet it has been found that the renunciation of the only younger child made the whole legitime accrue to the heir without collation.
10. For preferving an equality among all the children who continne intitled to the legitime, we have adopied the Roman doctrine of collatio bonorumn; where- annong by the child, who has got a provifion from his father, chaldecn. is obliged to collate it with the others, and impute it towards his own flare of the legitime; but if from the deed of provifion, the father fhall appear to have intended it as a pracipuum to the child, collation is excluded. A clild is not bound to collate an heritable fubject provided to him, becaufe the legitime is not impaired by fuch provifion. As this collation takes place only in queltions among children who are intitled to

Law of Scotland.

Confirma. tions.

Confirmation qua ex ecutor.cre- for all concerned, to make payment of his debt. Where citor.
13. A creditor, whofe debtor's teftament is already there is no confirmation, he himfelf may apply for the
the legitime, the reliet is not bound to collate donations given her by her hufband, in order to increafe the legitime; and on the other part, the children are not obliged to collate their provifions, in order to increafe her thare.
11. As an heir in heritage mult complete his titles by entry, fo an executor is not vented in the right of the moveable eftate of the deceafed without confirmation. Confirmation is a fentence of the commiffary or bifhop's court, impowering an executor, one or $m$ re, upon making inventory of the moveables pertaining to the deceafed, to recover, poffefs, and adminifter them, either in behalf of themfelves, or of others interefted therein. Teftaments muft be confirmed in the commiffariot where the deceared had his priucipal dwelling houle at his death. If he liad no fixed refidence, or died in a foreign country, the confirmation muft be at Edinburgh, as the commune forum; but if he went abroad with an intention to return, the commiffariot within which he refided, before he left Scotland, is the only proper court.
12. Confirmation proceeds upon an edict, which is affixed on the door of the parifh-church where the deceafed dwelt, and ferves to intimate to all concerned the day of confirmation, which mult be nine days at lealt after publifhing the edict. In a competition for the office of exceutor, the commiffary prefers, primo loco, the perfon named to it by the deceafed himfelf, whofe nomination he ratifies or confirms, without any previous decerniture : this is called the confirmation of a teflament-teftamentary. In default of an executor named by the deceafed, univerfal difponees are by the prefent practice preferred; after them, the next of kin; then the relict; then creditors; and, laftly, fpecial legatees. All thefe muft be decerned executors, by a fentence called a decree-dative; and if afterwards they incline to confirm, the commiflary authorifes them to adminifter, upon their making inventory, and giving fecurity to make the fubject thereof forthcoming to all having interelt; which is called the confirmation of a teftament dative. office, and confirm as executor-creditor; which intitles him to fue for and receive the fubject confirmed, for his own payment : and where one applies for a confirmation as exceutor-creditor, every co-creditor may apply to be conjoined with him in the office. As this kind of confirmation is fimply a form of diligence, creditors are exempted from the neceffity of confirming more than the amount of their debts.
14. A ereditor, whofe debt has not been conftituted or his claim not clofed by decree, during the life of his debtor, has no title to demand directly the office of executor qua creditor: but he may charge the next of kin who ftands off, to confirm, who muft either renounce within twenty days after the charge, or be liable for the debt; and if the next of kin renounces, the purfuer may conftitute his debt, and obtain a decree cognitionis cesufa, againt the bareditas jacens of the moveables, upon which he may confirm as executor-creditor to the deceafed. Where one is creditor, not to the deceafed, but to bis next of kin wh!o ftands off from
confirming, he may affect the moveables of the deceafed, by obtaining himfelf decerned executor-dative to the deceafed, as if he were creditor to him, and not to his next of kin.
15. Where an executor has either omitted to give up Confirmsany of the effects belongiwn to the deceafed in inven- tion atom tory, or has eltimated them below their juil value, there ${ }^{j a, ~ \& c .}$ is place for a new connirmation, al oniffi, vel male ap. prefiata, at the fuit of any having intereft; and if it appears that he has not omitted or undervalued any fubject dolof है, the commiffary will ordain the fubjects omitted, or the difference between the eftimations in the principal teftament and the true valies, to be added thereto; but if dole fall be prefumed, the whole fubject of the teftament ad omifia vel male asprotiata, will be carried to him who confirms it, to the cxclufion of the executor in the principal teltament.
16. The kgitime and relict's mare, becaufe they are Legitime, rights arifing ex lege, operate ipfo jure, upon the father's $\mathrm{E}_{\mathrm{c}}$ trans death, in favour of the relict and children; and confe- mit withquently pafs from them, though they should die before mation. confirmation, to their next of kin: whereas the dead's part, which falls to the ehildren or other next of kin in the way of fucceffion, remains, if they fhould die before confirming, in bonis of the firft deceafed; and fo does not defeend to their next of kin, but may be confirmed by the perfon who, at the time of confirmation, is the next of kin to the firft deceafed. Special affignations, though neither intimated nor made public during the life of the granter, carry to the affignee the full right of the fubjects affigned, without confirmation. Special legacies are really affignations, and fo fall under this rule. The next of kin , by the bare poffeffion of the ipfa corpora of moveables, acquires the property thereof without coafirmation, and tranfmits it to his executors.
17. The confirmation of any one fubject by the next Partial co: of kin, as it proves his right of blood, has been ad-firmation. judged to carry the whole executry out of the teltament of the deceafed, even what was omitted, and to tranfmit all to his own executors. The confirmation of a Itranger, who is executor nominated, as it is merely a trutt for the next of kin, has the effect to eftablifh the right of the next of kin to the fubjects confirmed, in the fame manner as if himfelf had confirmed them.
18. Executry, though it carries a certain degree of Execiltere reprefentation of the deceafed, is properly an office : how fas executors therefore are not fubjected to the debts due liables by the deceafed, beyond the value of the inventory; but, at the fame time, they are liable in diligence for making the inventory effectual to all having intereft. An executor-creditor who confirms more than his debt amounts to, is liable in diligence for what he confirms. Executors are not liable in intereft, even upon fuch bonds recovered by them as carried intereft to the deceafed, becaufe their office obliges them to retain the fums they have made effectual, in order to a diffribution thereof among all having intereft. This holds though they fhould again lend out the money upon intereft, as they do it at their own rifl.
19. There are certain debis of the deceafed called In what privileged debts, which were always preferable to every may pay other. Under that name are comprehended, medicines may pay furnifhed to the deceafed on deathbed, phyficians feesfentenct.
during
aw of during that period, funeral charges, and the rent of his
rland. houfe, and his fervants wages for the year or term current at his death. Thefe the executors are in fafety to pay on demand. All the other creditors, who either obtain themfelves contirmed, or whò cite the executor already contirmed, within fix months after their debtor's death, are preferred, parifuffu, with thofe who bave done more timely diligence; and therefore no executor can either retain for his own debt, or pay a teftamentary debt, fo as to exclude any creditor, who fhall ufe diligence within the fix months, from the benefit of the pari faflu preference; neither can a decree for payment of debt be ohtained, in that period, againft an executor, becaufe, till that term be elapled, it cannot be known how many creditors may be intitled to the fund in his hands. If no diligence be ufed within the fix months, the executor may retails for his own debt, and pay the refidus primo venienti. Such creditors of the deceafed as have ufed diligence within a year after their debtor's death, are preferable on the flubject of his teflament to the creditors of his next of kin.
20. The only paffive title in moveables is vitious intromiffion ; which may be defined, an unwarrantable intermeddling with the moveable eflate of a perfon deceafed, without the order of law. This is not confined, as the paffive titles in heritare are, to the perfons interefted in the fucseffion, but Atrikes againt all intromitters whatever. Where an executor confirmed intromits with more than he has confirmed, he incurs a paffive title; fraud being in the common cafe prefumed from his not giving up in ioventory the full fubject intermeddled with. Vitious intromiffion is alfo prefumed, where the repofitories of a dying perfon are not fealed up, as foon as he becomes incapable of fenfe, by his neareft relations; or, if he dies in a houle not his own, they mult be fealed by the mafter of fuch houfe, and the keys delivered to the judge-ordinary, to be kept by him, for the beriefit of all having intereft.
25. The paffive title of vitious intromifion does not take place where there is any probable title or circumHance that takes off the prefumption of fraud. In confequence of this rule, neceffary intromifion, or culfodia caufa, by the wife or children, who only continue the puffeffion of the deceafed, in order to preferve his goods for the benefit of all concerned, infers no paffive title. And, upon the fame principle, an intromitter, by confirming himfelf executor, and thereby fubjecting him. felf to account, before action be brought againf him on the paffive titles, purges the vitiofity of bis prior intromiffion : and where the intromitter is one who is interefted in the fucceffion, c. $g$. vext of kin, his confirmation, at any time within a year from the death of the deceafed, will exclude the paffive title, notwithflanding a prior citation. As this paffive title was intended only for the fecurity of creditors, it cannot be fued upon by legatees : and fince it arifes ex delizo, it carnot be pleaded againf the heir of the intromitter. As in delicts, any one of many delinquents may be fubjected to the whole puniflment, fo any one of many intromitters may be fued in folidum for the purfuer's debt, without calling the reit; but the intromitter who pays, has an action of relief agaioft the cthers for their flare of it. If the intromitters are fued jointly, they
are liable, not pro rata of their feveral intromifions, but pro virili.
28. The whole of a debtor's eftate is fubjected to the payment of his debts; and therefore, both liis heirs and executors are liable for them, in a quetion with credi- the beirand tors: but as fucceffion is by law divided into the he-crecutor. ritable and the moveable eltate, each of thefe ought, in a queftion between the feveral fucceffors, to bear the burdens which naturally affect it. Action of relief is accordingly competent to the heir who has paid a moveable debt, againft the executor; and vice verfa. This relief is not cut off by the deceafed's having difponed either his land-eftate or his meveables, with the burden of his cubole debts; for fuch burden is not to be conllrued as an alteration of the legal fucceffion, bue merely as a farther?fecurity to creditors, unle?s the contrary flall be prefumed from the fpecial lityle of the difpofition.

## IV. Of LAST HEIRS and bastards.

BY our ancient practice, feudal grants taken to the Where valfal, and to a fpecial order of heirs, without fetting there is no the laft termination upon beirs subatfoever, returned to heir, the the fuperior, upon failure of the fpecial heirs therein ceedso contained: but now that feus are become patrinonial rights, the fuperior is, by the general opinion, held to be fully, divefted by fuch grant, and the right defcends to the vaffal's heirs at law. And even where a valfal dies without leaving any heir who can prove the remotef propinquity to him, it is not the fuperior, as the old law flood, but the king, who fucceeds as lall heir, both in the beritable and moveable eftate of the dea ceafed, in confequence of the rule, $\mathcal{Q}^{\text {nod }}$ nullius f, , cedit domino Regi.
2. If the lands, to which the king fucceeds, be holden inmediately of bimfelf, the property is confolidated with the fuperiority, as if refignation had been made in the fovereign's liands. If they are holden of a fubject, the king, who cannot be vaffal to his own fubject, oames a donatory; who, to complete his title, muit obtain a decree of declarator; and thereafter lre is prefented to the fuperior, by letters of prefentation from the king under the quarter- Ceal, in which the fuperior is charged to enter the donatory. The whole ellate of the deceafed is, in this cafe, fubjected to his debts, and to the widow's legal provifious. Neitber the king nor his donatory is liable beyond the value of the fuccefifon. A perfon who has no heir to fucceed to him, cannot alien his heritage in leas, to the prejudice of the king, who is intitled to fet afide fuch deed, in the character of ultimus beres.
3. A baftard can have oo legal heirs, except thofe of King fuce his own body; fince there is no fucceflion but by ceeds a a sion the father, and a baftard has no certain father. The.timus bereeking therefore fucceed́s to him, failing his lawful iffue, to the bat as laft heir. Though the baflard, as abfolute proprie- farda tor of bis own eftate, can difpofe of his heritage in liege pouftie, and of his moveables by any deed inter vivos; yet he is difabled, ex: defecau natalum, from bequeathing by teflament, without letters of legitimation from the fovereign. If the ballard has lawful chil. dren, he may teft without fuch letters, and name tutors and curators to his iffue. Letters of legitimation. let their cluufes be ever fo frong, cannot enable the ballard.

Law of baltard to fucceed to his ratutal father, to the excluSco:land. lion of lawful heirs.
Bantards are 4. The legal right of frecemon, brigg fornded in oflegal, but lawful marriage: the iffue therefore of an unlavful not if de- marriage are incapable of fucceffion. A battard is exRined, fue- cluded, (1.) From his father's fueceffion ; becaufe law
cefion. knows no futher who is not marked out by marriage. (2.) From all heritable fuccefion, wisther by the father or minther: becaufe he cannot be pronounced lawful heir by the inquelt, in terms of the bricf. And, (3.) From the moveable fucceffion of his mother; for though the mother be known, the baflard is not her lawful child, and legitimacy is implied in all fucceffion conferred by laws. A battard, thouzli he cannot fucceed jure farguinis, may fucceed by deftination, where te is fpecially called to the fuccellion by an entail or teflament.
2. liens ean- 5. Certain perfons, though born ia lawful marriage, nor fucceced are incapable of fucceffion. Aliens are, from their alin ferdal rights; legiance to a freign prince, inc apable of fucceeding in feudal rights, without naturel 'za'ion Children born in a foreign flate, whofe fathers were natural born fu'smor Papifs.jects, and not attainted, are held to be natural born fubjects. Perfonseducated in, or profefling, the Pupihh religion, if they flall neglect, upon their attaining the age of 15 , to renounce its doctrines by a firned le laration, cannot flucceed in berituge ; hut mut give pisce to the next Proteftant heir, who will hold rhe cit te irredeemably, if the Popifin heir does not, it iten years after incurring the irritancy, tign the formusu prefrribed by the latute 1700, c. 3 .

C H A P. III.

## Of Actions.

$\mathrm{H}^{\prime}$Itherto of Perfons and Rights, the two firft objects of law: Actions are its third object, whereby perfons make their rights effectual.
tixxiii. Sect. I. Nature, divifion, \&c. of aEtions.
An action, what. An action may be defined, A demand regularly made and infitted in, before the judge competent, for the attaining or recovering of a right; and it fuffers feveral divifions, according to the different natures of the rights purfued upon.
astions.
2. Actions are cither real or perfonal. A real action is that which arifes from a right in the thing itfelf, and which therefore may be directed againft all poffeflors of that thing: thus, an action for the recovery, even of a moveable fubject, when founded on a jus in re, is in the proper acceptation real; but real actions are, in vulgar fpeech, confined to fuch as are dirceted againft heritable fubjects. A perfonal action is founded only on an obligation undertaken for the performance of fome faet, or the delivery of Some fubject ; and therefore can be carried on againtt no otherthan the perfon obliged, or his heirs.
3. Actions, again, are either ordinary or refciffory. All actions are, in the fenfe of this divifion, ordinary, which are not refciffory. Refciffory actions are divided, (I.) Into actions of proper improbation. (2.)

Actions of reduction improfation. (3.) Actions of fimple reduction. Proper improbations, which are brought for declaring writings falfe or forged, are no. ticed below, $\mathrm{N}^{\mathrm{T}}$ clxxxvi. 32. Reduction-improbation is an action, whereby a perfon who may be hurt or af impron. feeted by a writing, infifts for producing or exlibiting it in court, in order to have it fet alide, or its effect afcertained, under the certification that the writing, if not produced, fhall be declared falfe and forged. This certification is a fiction of law, introduced that the production of writings may be the more effectually forced, and thercfore it operates only in favour of the purfuer. Becaufe the fummons in this action proceeds en alleged grounds of fallhood, his majelly's advocate, who is the public profecutor of crimes, mull concur in it.
4. As the certification in this procefs draws after it fo heavy confequences, two terms are affigned to the defenders for production. After the fecond term is elapred, intimation muft be made judicially to the defender, to fatisfy the production within ien days; and till thefe are expired, no certification can be pronounced. Certification cannot pafs againtt deeds recorded in the books of feflion, if the defender fhall, before the fecond term, offer a condefcendence of the dates of their regiltration, untefs falfehood be objected: in which cafe, the origital mult be brought from the record to the court. But an extract from the inferior court is no bar to certification; the principal writing mult be laid before the court of feffion on a proper warrant.
5. in an a:tion of fimple reduction the certification Simple is only temporary, declaring the writings called for reducti null, until they be produced; fo that they recover their full force after productoon, even againit the purfuer hionfelf; for which reafon, that procefs is now feldom ufed. Becanfe its certification is nut fo fevere as in reduction-improbation, there is but one term affigned to the defender for producing the deeds called for.
6. The moft ufual grounds of reduction of wri-Groun tings are, the want of the requifite folemnities; that reducti the granter was minor, or interdicted, or inhibited; or that he figned the deed on death-bed, or was conipelled or frightened into it, or was circumvented; or that he granted it in prejudice of his lawful creditors.
7. In reductions on the head of force, or fear, or frand and circumvention, the purfuer muft libel the patticular ciccumflances from which his allegation is to be proved. Reduction is not competent upon every degree of force or fear; it mult be fuch as would thake a man of conflancy and refolution. Neither is it competent, on that fear which arifes from the juft authority of hulbands or parents over their wives or children, nor upon the fear arifing from the regular exccution of lawful diligence by caption, provided the deeds granted under that fear relate to the ground of debt contained in the diligeuce; but if they have no relation to that debt, they are reducible ex metu.
8. Alienations granted by debtors aftes contracting of lawful debrs, in favour of conjund or confident perfons, without jult and neceffary caufes, and without a jult price really paid, are, by the a\& 1621 , declared to be null. One is deemed a prior creditor, whofe ground of debt exitited before the right granted
by the debtor; though the written voucher of the debt fhould bear a date pofterior to it. Perfons are accounted conjunct, whole relation to the granter is fo near, as to bar them from judging in his cause. Confident perfons are thole who appear to be in the granter's confidence, by being employed in his affairs, or about his person; as a doer, fleward, or domettic fersant.
9. Rights, though gratuitous, are not reducible, if the granter had, at the date thereof, a fufficient fund for the payment of his creditors. Provifions to children are, in the judgment of law, gratuitous; fo that their effect, in a queftion with creditors, depends on the lolvency of the granter: but fettements to wives, either in marriage-centracts, or even after marrage, are onerous, in fo far as they are rational; and coniequently are nat reducible, even though the granter was infolvent. This rule holds alto in rational tochars contracted to hufbands: But it mut, in all cafes, be qualified with this limitation, if the infolacncy of the granter was not publicly knozen; for if it was, fraud is prefumed in the receiver of the right, by contracting with the bankrupt.
10. The receiver of the deed, if he be a conjunct or confident person, malt infliruct or fupport the onerows caudle of his right, not merely by his own oath, but by forme cireumflances or adminicles. But where a tight is granted to a ftranger, the narrative of it expreffing an onerous caufe, is fufficient per fo to fecure it againft reduction.
11. All voluntary payments or rights made by a bankrupt to one creditor, to difappoint the more timeous diligence of another, are reducible at the inflange of that creditor who has unfed the prior dillgence. A creditor, though his diligence be but begun by citation, may infift in a reduction of all porterio voluntary rights granted to his prejudice; bit the creditor who neglect cts to complete has begun diligence within a reafonable time, is not intitled to reduce any right granted by the debtor, after the time that the diligence is confidered as abandoned.
12. A prohibited alienation, when conveyed by the receiver to another who is not privy to the fraud, fibfits in the perfon of the bora file purchafer. In the cafe of moveable rights, this nullity is receivable by exception; but it mut be declared by reduction, where the right is heritable.
13. By act 1696, c. 5. all alicrations by a banksupt, within 60 days before his bankruptcy, to one creditor in preference to another, are reducible, at the inflance even of fuck co. creditors as lad not upped the leaf ilep of diligence. A bankrupt is there deferibed by the following characters; diligence unfed againft him by horning and caption; and insolvency, joined either with impifonment, retiring to the fanetuary, absconding, or forcibly defending himself from diligence. It is fufficient that a caption is railed againft the debtor, though it be not executed, providied he has retired to thun it. And by the late bankrupt flatute 23 d Geo. III. it is declared, that in all actions and queftions arifing upon the conftruction and effect of the act 1696 ; when a debtor is our of Sentland, or not liable to be imprifoned by reafon of privilege or perfonal protection, a charge of horning executed again him, together with either an arreft-
mont of any of his perfonal effects not looked or diffcharged within fifteen days, or a poinding executed of any of his moveables, or a decree of adjudication of any part of his heritable cilate, or fequefration by the act of a proper court, of all or any part of his elate or effects, heritable or moveable, for payment of debt, fall, when joined with infolvency, be held as fufficient proof of notour bankruptcy; and from and after the lat flop of fuck diligence, the fid debtor, if infolvent, fall be held bankrupt. It is provided (by aid act 1695 ), that all heritable hond or rights on which feifin may follow, fall be reckoned, in a queftion with the granter's other creditors upon this act, to be of the date of the feifin following thereon. But this act was found to relate orly to fecurities for former debts, and not to nova debits.
14. Actions are divided into reit purfecutorix, and Actions eiv. pancakes. $B y$ y the firth, the puifuer infints barely to re- ether pei percover the fubject that is his, or the debt due to him: ferutoric, of and this includes the damage fulained; for one is as penal. truly a fufferer in his patrimonial interell by that damage, as by the lops of the fubject itself. In peril actions, which always rife ex delizo, fornething is alto

 the delinquent, and are not tranfimifible againft heirs. paint the Yet the action, if it has ben commenced and litif. putficte contefted in the delinquent's lifetime, may be conti-

Law of Scotland.

nued-againft the heir, though the delinquent mould die during the dependence. Some actions are rel perfecutoric on the part of the purfuer, when he infills for fimble reflitution; which yet may be penal in refpect of the defender: e. $g$. the action on the paffive title of vitious intromiffion, by which the purfuer frequentlo recovers the debt due to him by the deceafed, tho, it Should exceed the value of the goods intermeddle with by the defenders.
18. The molt celebrated division of actions in orr

Actions pe. Story, law is into petitory, poffefory, and declaratory. Petitory aCtions are thole, where fomethins is demanded from the defender, in consequence of a right of property, or of credit in the purfuer: Thus, actions for rellitutimon of moveables, actions of pounding. of forthcoming, and indeed all perfonal actions upon contracts or quaicontracts, are petitory. Poffefory actions are thole which are founded, either upon poffeflion alone, as §puizzes ; or upon poffeffion joined with another title, as removings ; and they are competent either for getting into poffefion, for holding it, or for recovering it; analogous to the interdicts of the Roman law, quorum lonoruan, ut poffidetis, and unde vi.
Of molefta- 16. An action of moleftation is a poffeffory action, thus competent to the proprietor of a land-eftate, again thole who difturb his poffefron. It is chiefly unfed in quelions of commonty, or of controverted marches. Where a declarator of property is conjoined with a process of molefiation, the feffion alone is competent to the action. Actions on brieves of perambulation, have the fame tendency with moleflations, viz. the etthing of marches between conterminous lands.
20. The actions of mails and duties is fometimes

Of mails and duties. petitory, and fometimes poffeflory. In either cafe, it is directed against the tenants and natural poffeffors of land-eftates, for payment to the purfuer of the rents remaining due by them for pat crops, and of the full rent for the future. It is competent, not only to a proprict or whole right is perfected by feifin, but to a fimple difponee, for a difpofition of lands includes a right to the mails and duties; and confequently to an adjudger, for an adjudication is a judicial difpofition. In the petitory action, the purfuer, fince he founds upon right, not poffeffion, mut make the proprietor, from whom the tenants derive their right, party to the fit; and he mut support his claim by titles of proparty or diligences, preferable to thole in the perfon
Roffeffory. of his competitor. In the polfeflory, the purnuer who libels that he, his anceftors, or authors, have been feven years in poffefion, and that therefore he has the bonefit of a poff:ffory judgment, need produce no other title than a feifin, which is a title fufficient to make the poffeflion of heritage lawful; and it is enough, if he calls the natural puffeffors, though he should nefuffeffory gleet the proprietor. A poffefiory judgment founded judgment. on fever years poffeffion, in consequence either of a feitin or a tack, has this fffect , that though one fhould claims under a title preferable to that of the poffefor, he cannot compete with him in the poffeffion, till in a formal process of reduction he hall obtain the poffeffor's title declared void.
Declare:-
Surzara- 21. A declaratory action is that, in which forme right surg anion. is craved to be declared in favour of the purfuer, but nothing fought to be paid or performed by the defender, such as declarators of marriage, of irritancy, of $2 \mathrm{~N}^{\circ}{ }_{17} \mathrm{~S}$.
expiry of the legal revertion, \&cc. Under this claps may be alfo comprehended refciffory actions, which, without any personal conclufion againft the defender, tend dimply to Ret afide the rights or writings libelled, in confequence of which a contrary right ur immunity arifes to the purfuer. Decrees upon actions that are properly declaratory confer no new right ; they only declare what was the furfur's right before, and fo have a retrofpect to the period at which that right first commenced. Declarators, because they have no perronal conclusion againft the defender, indy be purfued againft an apparent heir withont a previous charge given him to enter to his anceftor; unless where fpecial circumftances require a charge.
22. An action for proving the tenor, whereby a wri-Adinn ting, which is dellroyed or amiffing, is endeavoured to proving be revived, is in effect declaratory. In obligations that tenor. are extinguifable barely by the debtor's retiring or cancelling them, the punner, before a proof of the tenor is admitted, mut condefcend on fuch a caffs amis. finis, or accident by which the writing was deftroyed, as flows it was loft when in the creditor's poffeflion; otherwife bonds that have been cancelled by the debtor on payment, might be reared up as fill fubfiltin $々$ again him: Rut in writings which require contrary deeds to extinguish their effect, as affignations, difpofitions, charters, \&c. it is fufficient to libel that they were loll, even cafiu fortuitio.
23. Regularly, no deed can be revived by this action, Admin without Come adminicle in writing, referring to that in writi which is libelled; for no written obligation ought to be railed up barely on the testimony of witnefies. If thee adminicles afford fufficient conviction that the deed libelled did once exits, the tenor is admitted to be proved by witneffes, who mut depone, either that they were prefent at ligning the deed, or that they afterwards flaw it duly fubfrribed. Where the reladive writings contain all the fubftantial clauses of that which is loft, the tenor is fometimes fuflained without witnefles. In a writing which is libelled to have contained uncommon claufes, all thee mull appear by the adminicles. Actions of proving the tenor are, on account of their importance, appropriated to the court of feffion; and, by the old form. the teflimony of the witneffes could not be received but in prefence of all the judges.
24. The action of double or multiple poinding may Multiply be alfo reckoned declaratory. It is competent to a pounding debtor, who is diffrefled, or threatened with diftrefs, by two or more perfons claiming right to the debt, and who therefore brings the feveral claimants into the field, in order to debate and fettle their feveral preferences, that fo he may pay fecurely to him whole right hall be found preferable. This action is daily pourfled by an arreftee, in the cafe of feveral arrellments ufed in his hands for the fame debt; or by tenants in the cafe of feveral adjudigers, all of whom claim right to the fame rents. In thefe competitions, any of the competitors may bring an action of multiple poinding in name of the tenants, or other debtors, without their content, or even though they thould difclaim the procells ; fine the law has introduced it as the proper remedy for getting foch competitions determined: And while the fubject in controverfy continues in media, any third perron who conceives he has a right to it, may,
though
dw of though he fhould not be cited as a defender, produce :otland. his titles, as if he were an original party to the fuit, and will be admitted for his intereft in the competition. By the forefaid bankrupt flatute, however, it is competent, in the cafe of a forthcoming or multiple-poinding raifed on an arreflment ufed within thirty days prior, or four kalendar months fublequent to a bankruptcy, for any other creditor producing his intereft, and making his cleim, in the procefs at any time before the expiration of the four months, to be ranked in the fame manner as if he had ufed the form of arrefment.
25. Certain actions may be called acceffory, becaufe they are merely preparatory or fubfervient to other actions. Thus, exbibitions ad deliberandum, at the inflance of an heir againft the creditors or cufodiers of his anceftor's writings, are intended only to pave the way for future proceffes. An action of transference is

 Vol. IX. Part II.
day we retain certain brievec, as of inquc/ $l_{b}$ terce, idiotry, tutory, perambulation, and perhaps two or three the But Pure
 inftitution of the college of juftice, introduced in the place of brieves. A fummons, when applied to actions purfued beforc the feffion, is a writ in the king's name, iffuing from his fignet upon the purfuer's complaint, authorifing meffengers to cite the defender to appear before the court and make his defences; with certification, if he fail to appear, that decree will be pronounced againt him in terms of the certification of the funmons. 29. The days indulged by law to a defender, between his citation and appearance, to prepare for his defence, are called inducia legales. If he is within the Inducie fe? defence, are called inducia legales. If he is within the Inductie
kingdom, 21 and 6 days, for the firt and fecond diets of appearance, muft be allowed him for that purpofe; and if out of it, Go and 15. Dcfenders refiding in Orkney or Zetland mult be cited on 40 days. In certain fummonfes which are privileged, the inducia are fhortened: Spuilzies and ejections proceed on 15
days; wakenings and transferences, being but incidays; wakenings and transferencees, being but incidental, on fix ; (fee the lit of privileged fummonfes, in act of federunt Jane 29th 1672.) A fummons muft be executed, i. e. ferved againit the defender, fo as the laft diet of appearance may be within a year after the date of the fummons; and it mutt be called within a year after that diet, otherwife it falls for ever. Offence againf the authority of the court, acts of malverfation in office by any member of the college of jufice, and acts of violence and oppreflion committed during the dependence of a fuit by any of the partics, may be tied without a fummons, by a fummary complaint.
30. Though the Romans acknowledged a concourfe Concourie 30. Though the Romans acknowledged a concourfe Concoure
of actions in their proceedings, it is not known in the of actions, law of Scotland. Therefore, where an action is in part penal, e. g. a removing, fpuilzie, \&c. a purfuer who refticts his demand to, and obtains a decree merely for, reflitution, cannot thereafter bring a new procefs for the violent profits. Yet the fame fact may be the foundation both of a criminal and civil actien, becaufe thefe two are intended for different purpofes; the one for facisfying the public juttice, the other for indem. nifying the private party : And though the defender hould be abfolved in the criminal trial, for want of evidence, the party injured may bring an action ad civilem effecium, in which he is intitled to refer the libel to the defender's oath.

3 i. One libel or fummons may contain different con. Accumul 1 31. One libel or fummons may contain different con- Accumulns
clufions on the fame ground of right, refciffory, de-tion of aco claratory, petitory, \&c. if they be not repugnant to tions. each other: Nay, though different fums be due to one, upon diftinet grounds of debe, or even by different debtors, the creditor may infift againft them all in the fame fummons.
32. Defences are pleas offered by a defender for Defentec: eliding an action. They are either dilatory, which do not enter into the caufe iffelf, and fo can only procure an abfolvitor from the lis pendens: Or percmptory,
which entirely cut of the purfucr's right of action. The firf, becairfe they relate to the forms of procceding, mult be offered in limine judicii, and all of them at once. But perenptory defences may be proponed at any time before fentence. By a late act of federunt, 4 X bos*
$\qquad$

[^30]fowever (1787), all defences, both dilatory and peremptory, fo far as they are known, muit be proponed at returning the fummons, under a penalty; and the fame enactment extends to the cafes of fulpenfions and advocations. The writings to be founded upon by the parties alfo muft be produced: the intention of the court, in framing the act of federunt, being 10 accelerate as much as poffible the decifion of caufes.
Iitifconter- 33. A caule, after the parties had litigated it before tation. the judge, was faid by the Romans to be litifcontefted. By litifcouteftation a judicial coutract is undertood to be entered into by the litigants, by which the action is perpetuated againf heirs, even when it arifes ex delifto. By our law, litifconteftation is not formed till an act is extracted, admitting the libel or defences to proof.
clixxiv.

## Sect. ll. Of Prebation.

Probation,
Allallegations by parties to a fuit, nuft be fupported by proper proof. Probation is either by writing, by the party's own oath, or by witneffes. In the cafe of allegations, which may be proved by cither of
frout de ju-
18:
by fingle combat; jure; becaufe, in fuch cafe, all the legal methods of probation are competent to the party; if the proof he brings by writing he lame, he may have recourfe either to witneffes or to his adveffary's oath; hut, if he fhould firt take himifelf to the proof by oath, he cannot thereafter ufe any other probation (for the reafon affigned par. 3.); and, on the contrary, a purfuer who has brought a proof by witneffes, on an extracted act, is not allowed to recur to the oath of the defender. Single combat, as a fort of appeal to Providence, was, by our ancient law, admitted as evidence, in matters both civil and criminal. It was afterwards reftrieted to the cafe of fuch capital crimes where no other proof could be had; fome traces of this blind methed of trial remained even in the reign of James VI. who, by 1600, c. 12. might authorife duels on weighty occafions.
by. writing. 2. As obligations or deeds figned by the party himfelf, or his anceftors or authors, mult be, of all evidence,
the leaft liable to exception; therefore evcry debt or allegation may be proved by proper evidence in writing. The folemnities effential to probative deeds have been already explained, ( $n^{\circ}$ clxxiv. 3. et Seq.) Books of account kept by merchants, tradefmen, and other deaters in bufinefs, though not fubfrribed, are probative againft him who keeps them; and, in cafe of furnifhings by a shop keeper, fuch books, if they are regularly kept by him, fupported by the teftimony of a fingle witnefs, afford a femiplena probatio in his favour, which becomes full evidence by his own oath in fupplement. Notorial inftruments and executions by meffengers bear full evidence, that the folemnities therein fet forth were ufed, not to be invalidated otherwife than by a proof of falfehood; but they do not prove any other extrinfic facts therein averred, againft third parties.
3. Regularly, no perfon's right can be proved by Probation 3. Regath, nor taken away by that of his adverfary; becaufe thefe are the bare averments of parties in their own favour. But, where the matter in iffue is referred by one of the parties to the oath of the other, fuch oath, though made in favour of the deponent himfelf, is decifive of the point; becaufe the reference is a vir-
tual contract between the litigants, by which they are underitood to put the iffue of the caufe upon what thatl Scotlan be depofed: and this contract is fo Atrictly regarded, that the party who refers to the oath of the other cannot afterwards, in a civil astion, plead upon any deed againt the party depofing, inconfiftent with his oath. To obviate the fnares that may be laid for perjury, he, to whofe oath of verity a point is referred, may refufe to depofe, till his advertary fwear that he can bring no other evidence in prouf of his altegation.
4. A defender, though he cannot be compelled to fwear to facts in a libel properly criminal; yet may, in trefpaffes, where the conclution is limited to a fine, or to damages. In general, an oath of party cannot cither hurt or benefit third parties; being, as to them, res inter alios ata.

5: An oath upon reference is fometimes qualified by Qalifi fpecial limitations refricting it. The qualities which oaths. are admitted by the judge as part of the oath, are called intrinffc ; thofe which the judge rejects or feparates from the oath, exirrinfic. Where the quality makes a part of the allegation which is revelantly referred to oath, it is intrinfic. Thus, becaufe a merchant, fuing for furnifhings after the three years, muft, in order to make a relevancy, offer to prove by the defender's oath, not only the delivery of the goods, but that the price is ftill due; therefore, though the defender hould acknowledge upon oath his having received the grods, yet, if he adds, that he paid the price, this lait part being a denial that the debt fubsills, is intrinfic, fince it is cruly the point referred to nath. Where che quality does not import an extinction of the debt, but barcly a counter-clain, or mutua petitio, againd the purfuer, it is held as extrintic, and mult be proved aliunde. Neither can a defender who in his oath admits the conftitution of a debt, get off by adjecting the quality of payment, where the payment ought by its nature to be vouched by written evidence.
6. Oaths of verity are fometimes referred by the judge to either party, ex officio; which, becaule thcy Oathpiter are not founded on any implied contract between the litigants, are not finally decifive, but may be traverfed on proper evidence afterwards produced. Thefe oaths are commonly put by the judge for fupplying a lame or imperfect proof, and are therefore cailed oatlos in fupplement. (See par. 2.)
7. To prevent groundlefs allegations, oaths of ca- Oath o lumny have been introdused, by which either party may caluna demand his adverfary's oath, that he believes the fact contained in his libel or defences to be juft and true. As this is an oath, not of verity, but only of opinion, the party who puts it to his adverfary does not renounce other probation; and therefore no party is bound to give an oath of calumny, on recent facts of his own, for fuch oath is really an oath of verity. Thefe oaths have not been fo frequent fince the act of federunt, Feb. 1. 1715, whereby any party, againft whora a fact thall be alleged, is obliged, without making oath, to confefs or deny it ; and, in cafe of calumnious denia!, is fubjected to the expence that the other party bas thereby incurred.
8. In all oaths, whether of verity or calumny, the citation carries, or at leat implies, a certification, that if the party does not appear at tbe day afligned for depofing, he fhall be held proconfeflo; from a prefump.
av of tion of his confeinufnefs, that the fact upon which be rlat. dechines to fwear makes againf him; but no party can be held pro confein, if he be in the kingdon, withont a previous perfmal citation ufed againft him. Though an wath which refolves into a non memini, cannot be faid to prove any point ; yet where one fo depufes up. on a recent fact, to which he himfelf was privy, his oath is confidered as a difembling of the truth, and he is lield pro confejfo, as if he bad refufed to fwear.
9. An oath in lilem, is that which the judge refers to a purfuer, for afeertaising either the quantity or the value of goods which have been taken from him by the defender without order of law, or the extent of his damages. An oath in litem, as it is the affirmation of a party in his own behalf, is only allowed where there is proof that the other party has been engaged in fome illegal act, or where the public policy has made it neceflary, (fee $n^{\circ}$ elxxiii. 11.) This oath, as to the quancities, is not admitted, where there is a concurring teAlimony of witneffes brought in proof of it. When it it put as to the value of goods, it is only an oath of credulity ; and therefore it has always been fubject to the modification of the court.
10. The law of Scotland rejects the teflimony of witnefics, (1.) In payment of any funs above L. ico Seots, all which mult be proved either firipto vel juramento. (2.) In all gratuitous promifes, though for the fmalleth trifle. (3.) In all coutracts, where writing is either effential to their conflitution, (fee ${ }^{\circ}$ claxiy. 2.) or where it is ufually adhibited, as in the borrowing of money. And it is a general rule, fobject to the reffrictions mentioned in the next par. that no debt or right, once conftituted by writing, can be taken away by witrieffes.
15. On the other part, probation by witneffes is admitted to the extent of L. 100 Scots, in paymente, nuncupative legacies, and verbal agreements which contain matual obligations. And it is received to the highelt extent, (1.) In all bargains which have known engagements naturally arifing from them, concerning moveable goods. (2.) In facts performed in fatisfaction, even of a written obligation, where fuch obligation bincis the party precifely to the performance of them. (3.) In facts which with difficulty admit of a proof by writing, even though the effect of fuch proof fhould be the extiaction of a written obligation, efpecially if the facts import fraud or violence; thus, a bond is reducible ex dolo, on a proof by witneffes. Laftly, all intromifuon by a creditor with the rents of his debtor's eltate payable in grain, may be proved by witneffes; and even intromiffion with the filver-rent, where the creditor has entered into the total poffefion of the debtor's lands.
12. No perfon, whofe near relation to another bars hin from being a judge in his caufe, can be admitted as a witnefs for him ; but he may againft him, except a wite or ehild, who cannot be compelled to give teflimony againft the huband or parent, ol reverentiam perfons, et niteum perjuriz. Though the witnefs, whofe propinquity to one of the parties is objected to, be as nearly related to the other, the objection Itands good.
13. The teftimony of infarnous perfons is rejected, i.e. perfons who have been guilty of crimes that law declares to infer infamy, or who have been deelared infamous by the fentence of a judge; but infamia fadi
does not difqualify a witnefs. Pupils are inhabile witnefles; being, in the judgment of $1 a r$, incapable of the impreffions of an oath. And in general witnefics o. therwife sxeeptionable may, where there is a penury of witnefles ariling from the natore or ciremmifanees of the fact, be received cunn nota; that is, their teftimony, though not quite free from fufpicion, is to be conjoined with the other evidence, and to have foch weight given it as the judge fhall think it deferves.
14. All witneffes, before they are examined in the Purgation caufe, are purged of partial counfel; that is, they mult of winefdeclare, that they have no intereft in the fuit, nor bave fee. given advice how to eonduct it ; that they have got neither bribe nor promife, nor have been initructed how to depofe; and that they bear no enmity to either of the parties. Thefe, becaule they are the points put to a witnefs before his making oath, are called initialia t.Atimonii. Where a party can bring prefent proof of a witnefs's partial counfel, in any of the above partienlars, he oaght to offer it before the witnefs be fworn; but, becaufe fuch objection, if it cannot be inftantly veribed, will be no bar to the examination, law allows the party in that cafe to proteft for reprobator, before the witnefs is exanimed; i.e. that he may be afterwards allowed to bring evidence of his enmiiy, or other inability. Reprobator is competent even after fentence, where protefation is duly entered; but in that cafe, the part: infilting mult contign L. 100 Scots, which he forfeits if he fuecumb. This action muft have the concorrence of the king's advoeate, becaufe the conclufion of it imports perjary ; and for this reafon, the witnefs muit be made a party to it.
15. The interlocutory fentence or warrant, by which Diligence 7 partes are authorifed to bring their proof, is either by againe wito way of act, or of incident diligence. In an act, the neffes. lord ordinary who pronounces it is no longer judge in the procets; but in an incisent diligence, which is commonly granted upon fpecial points, that do not exhault the caure, the lord ordinary continues judge. If a witnefs does not appear at the day fixed by the warrant of citation, a fecond warrant is granted of the nature of a eap:tion, containing a command to meffengers to apprehend and bing him before the court. Where the party to whom a proof is granted, brings none within the term allowed by the warrant, an interlocutor is pronounced, circumdaeing the term, and pre-Circumcloding him from bringing evidence thereafter. Where duetion. evidence is brought, if it be upon an act, the lord ordinary on the acts, after the term for proving is elapfed, declares the proof concluded; and thereupon a ftate of the cafe is prepared by the ordinary on concluded caufes, which mult be judged by the whole lords; but if the proof be taken upon an ineident diligence, the import of it may be determined by the lord ordiaary in the caufe.
16. Where facts do not admit a direct proof, pre- prefumpfumptions are received as evidence which in many cafes, tions. make as convincing a proof as the direet. Prefumptions are confequences deduced from facts known or proved, which infer the certainty, or at ledft a flrong probatility, of another fact to be proved. This kind of probation is therefore called aitificial, becaufe it tequires a reafoning ts infer the truth of the point in quellion, from the facts that already appear in proof. Prefump. tions are cither, 1. juris et de juire; 2.juris; or, 3. bo-
minis
I. IW of Ecolland.
minis or jadicis. The Grif fort obtains, where flatute or cuftum eftablifkes the truth of any point upon a prefumption; and it is fo Atrong, tbat it rejects all proof that may be brought to elide it in fpecial cales. Thus, the tellimony of a witneff, who forwardly offers himfelf without being cited, is, from a prefumption of his partiality, rejected, let his character be ever fo fair; and thus alfo, a minor, becaule he is by law prefumed incapable of conducting his own affairs, is upon that prefumption difacled from acting without the confent of his curators, though he flould be known to behave with the greatell prudence. Many fuch prefumptions are fixed by flatute.
17. Prefunpliones juris are thole which our lawtooks or Lecilions have eftablithed, without founding any particular confequence upon them, or flatuting fuper prefumpto. Moft of this kind are not proper prefumptions inferred from pofitive facts, but are founded merely on the want of a contrary proof; thus, the legal prefumptions for freedom, for life, for innocence, \&c. are in effect fo many negative propofitions, that fervitude, death, and guilt, are not to be prefumed, without evidence brought by him who makes the allegation. All of them, whether they be of this fort, or proper prefumptions, as they are only conjectures formed from what commenly happens, may be elided, not only by direct evidence, but by other conjectures, affording a ftronger degree of probability to the contrary. Prefumptiones bominis or judicis, are thofe which arife daily from the circumftances of particular cafes; the flrength of which is to be weighed by the judge.
žirio juris. 18. A fictio juris differs from a prefumption. Things are prefumed, which are likely to be true; but a fictiou of law affumes for truth what is either certainly falfe, or at leall is as probably falfe as true. Thus an heir is feigned or confidered in law as the fame perfon with his anceftor. Fictions of law muft, in their effects, be always limited to the feccial purpofes of equity for which they were intruduced; fee an example, $\mathrm{N}^{\circ}$ clxxxiii. 3 .

## Sect. Ill. Of Sentences and their Executions.

Property would be molt uncertain, if debateable points might, after receiving a definitive judgement, be brought again in queftion, at the pleafure of either of the parties: every flate has therefore fixed the character of final to certain fentences or decrees, which in
the Roman law are called res judicata, and which exclude all review or rehearing.
2. Decrees of the court of feflion, are either in foro contradiacorio, where both parties bave litigated the caufe, or in abfence of the defender. Decrees of the feffion in foro cannot, in the general cafe, be again brought under the review of the court, either on points which the parties neglected to plead before fentence (which we call competent and onzitted), or upon points pleaded and found infufficient (proponed and repelled.) But decrees, though in foro, are reverfible by the court, where either they labour under effential nullities ; e. g. where they are ultra. petita, or not conformable to their grounds and warrants, or founded on an error in calcul, Eic.; or where the party againlt whom the decree is obtained has thereafter recovered
evidence fufficient to overturn it, of which he knew Lawo
not befure.
3. As parties might formerly reclaim againt the fentences of the fefion, at any time before extrating the decree, no judgment was final till extract; but cutive ul now, a fentence of the inner-houle, either not reclaimed againlt within fix federunt days affer its date, or adhered io upon a reclaiming bill, thou h it cannot receive execution till extract, makes the judgment final as to the court of feffion. And, by an order of the houle of lords, March 24.1725, no appeal is to be received by thein from fentencers of the felfion, after Time lio five years from extrafting the fentence; unlefs the per-ted for a fon intitled to fuch appeal be minor, clothed with a ${ }^{\text {peals. }}$ hufband, non compos mentis, inprifoned, or out of the kingdom. Sentences pronounced by the lord ardinary lave the fame effect, if not reclaincd againtt, as if they were pronounced in prefence; and all petitions againit the interlocutor of an ordinary mult he preferred within eight federunt days after figning fuch interlocutor.
4. Decrees, in abfence of the difender, have not Decrees the furce of res juthicatex as to him; for where the de-ablence. fender does not appear, he cannot be faid to have fubjected himfelf by the judicial contract which is implied in litifconteftation; a party thersfore may be reftored againt thefe, upon paying to the ot her his colts in recovering them. The fentences of inferior courts may be reviewed by the court of feflion, -before decree, by advocation, -and after decree, by fufpenfion or reduction; which two laft are alfo the methods of calling in quellion luch decrees of the feffion itfelf, as can again be brouglit under the review of the court.
5. Reduction is the proper remedy, tither where ${ }_{\text {Decrees }}$ the decree has already received full execution by pay- verwees, ment, or where it decrees nothing ta by paid or per- ther by formed, but fimply declares a right in favour of the purfuer. Sufpenfion is that form of law by which the effcet of a fentence condemnatory, that has not yet received execution, is flayed or pollponed till the caufe be again confidered. The firt ftep towards fulpenfion is a bill pieferred to the lord ordinary on the sills. This bill, when the defire of it is granted, is a warrant for iffuing letters of fufpenfion which pafs the fignet ; but if the prefenter of the bill ihall not, within 14 days after paffing it, expedite the letters, execution may by act of federunt 1677 proceed on the fentence. In practice, however, it is ufual for the charger to put up a proteftation in the minute book for production of the fufpenfion, which may be expedited at any time before this is done; and if the fufpender Thall allow the proteflation to be extracted, the litt falls. Sufpenfions of decrees in foro cannot pafs, but by the whole lords in time of feffion, and by three in vacation time; but other deerees may be fulpended by any one of the judges. By the late act of federunt ( 1.787 ), in order to remedy the abufe of prefenting a nultiplicity. of bills of fufpenfion of the decrees of inferior judges in fmall caufes which have paffed in abfence, it is declared, that all bills of fulpenfion of decreets by infe. rior judges in abfence of the defenders in caufes under. 82 l. Sterling value, thall be refufed and remitted to the inferior judge if competent; the fufpender, how. evcr, before being heard in the inferior court, reimbur-
figg

Law of fing the charger of the expences incurred by him pre. joorland. vious to the remit.
6. As fufpenfion has the effect of flaying the execution of the creditor's legal diligence, it cannot, in the general cafe, pafs without caution given by the furpender to pay thie debt, in the event it thall be found due. Where the fufpender cannot, from his low or fufpected circumblarices, proeure unqueftionable fecurity, the lords admit juratory caution, $i$ e. fuch as the fufpender fwears is the bell he can offer ; bur the reafons of fulpenfion are, in that caft, to be confidered with particular accuracy at paffing the bill. Decrees in favour of the elergy, of univerfities, hofpitals, or pariflfchoolmallers, for their hipends, rents, or falaries, cannot be fufpenced, but upon production of difcharges, or on confignation of the fums charged for. A charger, who thinks himfelf fecure without a eautioner, and wants difpatch, may, where a fulpenfion of his diligence is fought, apply to the court to get the reafons of fufpenfion fuminarily difcuffed on the bill.
7. Though he, in whofe favour the decree fulpencl-
 ecent. decree may be fufpended before a charge be given on it. Nay, fufpenfion is competent even here there is no decree, for putting a flop to any illegal act whatfoever : thus, a building, or the exercife of a power which one aflumes unwarrantably, is a proper fubject of fufpenfion. Letters of fulpenfion are confidered merely as a prohibitory diligence; fo that the fufpender, if he would turn provoker, mult bring an action of reduction. If, upon difcuffing the letters of fufpenfion, the reafors thall be fultained, a decree is pronounced, fufpending the letters of diligence on which the charge was given fimpliciter; which is called a decree of fufpenforis, and takes off the effect of the decree fufpended. If the reafons of fufpenfion be repelled, the court find the letters of diligence orderly proceeded, i. e. regularly carried on; and they ordain them to be pur to fatther execution.
yeradica 8. Decrecs are carried into execution, by diligence, decrees. either againft the perfon or againft the ellate of the debtor. The firft flep of perfonal execution is by letters of horning, which pafs by warrant of the court of feffion, on the decrees of magill rates of borough Sheriffs, admirals, and commiffaries. If the debtor does not obey the will of the letters of horning within the days of the charge, the charger, after denouncing him rebel, and regittering the horning, may apply for letters of caption, which contain a command, not ondy to meffengers, but to magiltrates, to apprehend and imprifon the debtor. All meffengers and magiftrates, who rcfufe their affiltance in executing the caption, are liable fubfidiariè for the debt; and fuch fublidiary action is fupported by the execution of the meffenger employed by the creditor, exprefling that they were charged to concur, and would not. Letters of caption contain an exprefs warrant to the meffenger, in cafe he cannot get accefs, to break open all doors and other lock fatt places.
9. Law fecures peers, married women, and pupils, againt perfonal execution by caption upon civil debts. Sueh commoners alfo as are elected to ferve in parliament, are fecured againft perfonal execution by the privilege of parliament. No caption can be executed
agaiat a debtor trithin the precincts of the king's pa. lace of Holyroodthoufe : hut this privilege of fanctuary afforded no fecurity to criminals, as that did which was, by the canon law, conferred on churches and religious houfes. Where the perfonal prelence of a debtor, under caption. is neceffary in any of our fupreme courts, the judges are empowered to grant him a protection, for fuch time as may be fufficient for his coming and going, not exceeding a month. Protection from dili gence is alfo granted by the eourt of feffion under the late bankrupt tatute, where it is applied for, with coneurrence of the truftee, or a certain number of the creditors as the cafe may require.
10. After a debtor is imprifoned, he ought not to Prifoners be indulged the benefit of the air, not even under a muze he guard ; for creditors have an intereft, that their debiors fincely be kept under clofe confinement, that, by the fqualor carceris, they may be brought to pay their debt: and any magiltrate or jailor, who fhall fuffer the prifoner to go abroad, without a proper atteilation, upon oath, of the dangerous itate of his health, is liable julfidiarit for the debt. Magittrates are in hike manner liable, if they thall fuffer a prifoner to efeape through the infufficiency of their prifon: but, if he thall eleape under night, by the ufe of inftruments, or by open force, or by any other accident which eannot be unputed to. the magiflrates or jailor, they are not chargeable with the debt ; provided they fhall have, immediately after his eficape, made all pollible fearch for him. A cafe lately occurred where a meffenger having apprehended a perfon for a debt, upon letters of caption, delivered him over to the pruvolt of the burgh, and took a receipt for him. The provoft allowed him to remain at the inn all night. and afterwards allowed him what is. called open gaol, by which he had aecefs to the courthoufe, under the fame roof with the prifon, where he tranfacted bufinefs. As the perion at whore inflanec be was apprehended upon the capcion, confidered that the magiltrates had not kept the debtor in prifon as commanded by the letters, brought an action agaiuft them for the debt, althongh the debtor had not fo much as attempted to make bis efcape. It was contended by the magiftrates, that they were not liable, having only followed the ufual practice of the burgh:but the court of feffion, confdering the magiftrates as principal keepers of the prifon, and as fueh haviog no diferetionary power, were of opinion, that the debtor had never been impifoned in the eye of law, and therefore found the magittrates liable; and their judgment was affirmed upon appeal. Regularly, no prifoner for Form of fion debt upon letters of caption, though he fhould have berating a. made payment, could be releafed without letters of fuff $\mathrm{E}^{\text {rifo ners }}$ penfion, containing a charge to the jailor to fet him at liberty; becaufe the ereditor's dicharge could not take off the penalty incurred by the debtor for contempt of the king's authority: but to fave unneceflary expence to debtors in fmall debts. jailorgare empowered to let go prifoners where the debt does not exceed 200 merks Scots, upon production of a difcharge, in which the creditor confents to his relcafe.
i1. Our law, from a confideration of compaffion, allows infolvent di btors to apply for a releafe from pri. fon upon a cefo bourum, a e. upon their making over unn a acrez to to the creditors all their eftate retl and perional. This mul be iffifed for by way of antion, to which all the
creditas:

Law of Ecotland. not eninpeienc to delinquents. ing on a fubnifion to arbiters, has Come affinity with a judicial fentence, though in moll refpects the two dif-
Submifion. fer. A fubinifion is a contract entered into by two or more parties who have difputable rights or claims, whereby they tefer their differences to the final determination of an arbiter or arbiters, and oblize themfelves to acqueffe in what ftall be decided. Where the day withnn which the arbiters are to decide, is left blank in the fubmiffon, practice has limited the arbieqre power of deciding to a year. As this has proceed-
ed from the ordinary words of ftyle, empowering the arbiters to determine betwixt and the
day of
next to come; therefore, where a fiumifition is indefinite, without fpecifyinr any time, like all other contracts or obligat:ons, it fublills for 40 years. Submiffinas, like mandates, expire by the deaih of any of the parties-fubmitters lefore fentence. As arbiters are not vefted with juriddiction, they cannot compel witnefles to make oath before them, or havers of writings to exhibit them; but this defect is fupplied by the court of feffion, who, at the fuit of the arbiters, or of either of the parties, will grant warrant for citing wit. nefles, or for the exhibition of writings. For the fame reafon, the power of arbiters is barely to decide; the execution of the decree belongs to the judge. Where the fubmitters confent to the regillration of the de-cree-arbitral, performance may be enforced by fummary diligence.
16. The power of arbiters is wholly derived from Powers the confent of parties. Hence where their powers are arbuters. limited to a certain day, they cannot pronounce fentence afier that day. Nor can they fubject parcies to a penalty higher than that which they have agreed to in the fubmifion. And where a fubmiffion is limited to fpecial claims, fentence pronounced on fubjects nut fpecified in the fubmifion is null, as being ultra vires compromi/f.
17. But, on the other hand, as fubmifions are de- Decrees a figned for a moft favourable purpofe, the amicable com- bitrat, $h 1$ pofing of differences, the powers thereby cor.ferred on tar reduarbiters receive an ample interpretation. Decrees-ar- ${ }^{\text {cible. }}$ bitral are not reciucible upon any ground, except corruption, bribery, or falfehood.

## Sect. IV. Of Crimes.

cixxxyi.
The word crime, in its moft general fenfe, includes Crimes, every breach either of the law of God or of our coun. try; in a more reftricted meaning, it fignifies fuch tranfgrefions of law as are punifhable by courts of juftice. Crimes were, by the Roman law, divided into public and private. Public crimes were thofe that were exprefsly declared fuch by fome law or conftitution, public, 2 and which, on account of their more atrocious nature and hurtful confequences, might be profecuted by any member of the community. Private crimes could be private. purfued only by the party injured, and were generally punifhed by a pecuniary tine to be applied to his ufe. By the law of Scotland, no private party, except the perfon injured, or his next of kin, can accule criminally: but the king's advocate, who in this queltion reprefents the community, has a right to profecute all crimes in vindialam publicum, though the party injured fhould refufe to concur. Sinaller offences, as petty riot, injuries, \&cc. with do not demand the public vengeance, pafs generally by the appellation of delicis, and are punifhed either by fine or imprifonment.
2. The effence of a crime is, that there be an inten- What ef tion in the actor to commit; for an action in which fential to the will of the agent has no part, is not a proper ob-crimes-d ject either of rewards or punithments: hence arifes the rule crimen dulo contrabitur. Simple negligence does not therefore conltitute a proper crime. Yet where it is extremely grofs, it may be punithed arbitrarity. Far lefa can we reckon in the number of crimes, thofe com-
L.aw of mitted by an idiat or furious perfon: but leffer degrees of fatuity, which only darken wafon, will nut afford a total defence, though they may fave from the pana ordimaria. Actions committed in drunkennefs are not to be confidered as involumtary, fecing the drunkennefs itfelf, which was the firlt caufe of the action, is both voluntary and criminal.
3. On the fame pricucipla, fuch as are in a flate of infancy, or in the confines of it, are incapable of a criminal action, dole not heing iucident to that age ; but the precife age at which a perfon becomes capable of dole, being fixed neither by nature nor by flatute, is by our pradtice to be gathered by the judge, as he beft can, from the undertanding and manners of the perfon accufed. Where the guilt of a crime arifes chiefly from flatute, the actor, if he is under puberty, can hardly be found guilty; but, where nature itfelf points out its deformity, he may, if he is proximus pulertati, be more eafily profumed capable of committing it: yet, even in that cafe, he will not be punilhed poxa ordimaria.
4. One may be guilty of a crime, not only by perpetrating it himedf, but being acceffory to a crime committed by another; which latt is by civilians fyled ope et conflitio, and, in our law-phrafe, art and part. A perfon may be guilty, art and part, either by giving advice or counfel to commit the crine; or, 2. By giving warrant or mandate to commit it; or, 3. By actually affitting the criminal in the execution. It is generally agreed by doctors, that, in the more atrocious crimes, the adviler is equally punilhable with the criminal ; and that, in the flighter, the circumftances arifing from the advifer'- leffer age, the jocular or carelefs manner of giving advice, \&c. may be received as pleas for foftening the punifhment. One who gives mandate ro commit a crime, as he is the firlt fpring of action, feems more guilty than the perfon employed as the inflrument in executing it ; yet the actor cannot excufe himfelf under the pretence of orders which he ought not to have obeyed.
5. Affiftance may be given to the committer of a crime, not only in the actual execution, but previous ro it, by fornifhing him, intentionally, with poifon, arms, or the other means of perpetrating it. That fort of affiftance which is not given till after the criminal act, and which is commonly called abecting, though it be of itfelf criminal, does not infer art and part of the principal crime; as if one fhould favour the efcape of a criminal knowing him to be fuch, or conceal him from juftice.
6. Thofe crimes that are in their confequences moft hurfful to fociety, are punifhed capitally, or by death; others efcape with a leffer punifhment, fometimes fixed by flatute, and fometimes arbitrary, i. e. left to the difcretion of the judge, who may exercife his jurifdiction, either by tine, imprifonment, or a corporal punifhment. Where the puniflment is left, by law, to the difcretion of the judge, be can in no cafe extend it to death. The fingle efcheat of the criminal falls on conviction, in all capital triale, though the fentence fhould

Mfyhemy. 7. Certain crimes are committed more immediately againt God himfelf; others, againlt the flate; and a third kind, againft particular perfons. The chief crime in the firli clafs, cognifable by temporal courts, is blaf.
not exprefs it.
phemy, under whitch may be included atbei/m. This crime conlift in the denying or vilifying the Deity, by fpetch or writing. All whin curfe God or any of the petfons of the bitfled Trinity, are to fuffier deach, even for a fingle act; and thofe who deny him, if they perfill in their denial. The denial of a Providence, or of the authority of the holy Scriptures, is punihable capitally for the third offence.
8. No profecution can mow be carried on for witchcraft or conjuration. But all who undertake, from their fill in any occult Ccience, to tell fortupes, or difcover follen goods, are to fuffer imprifonment for a year,
Hand in the pillore four Hand in the pillory four times in that year, and find furety for their future good behaviour.
9. Some crimes againt the trate are levelled dircetly Treafon, againft the fupreme power, and frike at the conftitution itfelf: olhers difcover fuch a contempt of law, as tends to baffle authority, or facken the reins of government. Treafon, crimen majeflatis, is that crime which is aimed againtt the majelly of the ftate; and can be committed only by thofe who are fubjects of that thate either by birth or relidence. Soon after the union of the two kingdoms in 1707, the laws of treafon, then in force in England, were made ours by 7 . Ann. c. 2 1. both with regard to the facts conllituting that crime, to the forms of trial, the corruption of blood, and all the penalties and forfeitures confequent on it.
10. It is high treafon, by the law of England, to imagine the death of the King, Queen-confort, or of the heir apparent of the crown; to levy war againft the King, or adhere to his enemies; to counterfeit the kiug's coin, or his great or privy feal ; to kill the chancellor, treafurer, or any of the 12 judges of England. wh:le they are doing their offices: which latt article is by the forenanied act 7 . Ann. applied to Scotland, in the cafe of flaying any judge of the feffion or of jalticiary fitting in judgment. Thofe who wafh, clip, or lighten, the proper money of the realm ; who advifedly affirm by writing or printing, that the Pretender has any right to the crown, that the king and parliament cannot limit the fucceffion to it, or who hold correfpondence with the Pretender, or any perfon employed by him, are alfo guilty of treafon.
11. The forms of proceeding in the trial of treafon, Pains of whether againft peers or commoners, are fet forth in a treaforo fmall treatife, publithed by order of the houfe of lords in $\mathbf{7 0 9}$, fubjuined to a collection of thatutes concerning treafon. By the conviction upon this trial, the whole eftate of the traitor forfcits to the crown. His blood is alfo corrupted, fo that, on the death of an anceltor, he cannot inherit; and the eftate which be cannot take, falls to the immediate fuperior as efcheat, ob defeitum beredis, without ditinguinhing whether the lands hold of the crown, or of a fubject. No attainder for treafon flall, after the death of the Pretende: and all his fons, hurt the right of any perfon, other than that of the offender, during his natural life; the rights of creditors and other third parties, in the cafe of forfeiture on treafon, mult be determined by the law of England.
12. Mifprifion of treafon, from megrendre, is the o-mifprifian verlooking or concealing of treafon. It is inferred by of ircafurn one's bare knowledge of the crime, and not difcovering it to a magittrate or other perfon intitled by his
office

Sedition.

## Corruption

 in judges.Weforse nnent,
office to take examinations; though he fhould not in the leaft degree aflent to it. The forefaid adt 7 Ann. makes the Enclifh law of mifprition ours." Its punifhment is, by the law of England, perpetual imprifonment, together with the forfeiture of the offender's moveables, and of the profits of his heritable eftate, during his life; that is, in the fyle of our law, his fingle and liferent efcheat.
13. The crime of fedition confifts in the raifing commotions or difturbancers in the flate. It is either verbal or real. Verbal fedition, or leafing making, is inferred from the uttering of words tending to create difcord between the king and his people. It is punifhed either by imprifonment, fine, or banifhment, at the difcretion of the judge. Real fedition is generally committed by convocating togerher any corfiderable number of pcople, without lawful authority, under the pretence of redrefing fome public grievance, to the diflurbing of the public peace. Thofe who are convicted of this crime are punifhed by the confifcation of their foods; and their lives are at the king's will. If any perfons, to the number of 12 , hall affemble, and being required by a magillate or contable to difperfe, hall neventhelefs continue together for an hour after fuch command, the perfons difobeying fhall fuffer death and conffication of moveables.
I 4 . Juiges, who, wilfully or through corruption, ufe their authority as a cover to injullice or oppreflion, are punifhed with the lofs of honour, fame, and dignity. Under this head may be claffed theftiote (from bote, "compenfation"), which is the taking a conlideration in money or gonds from a thief to exempt hime from punifhment, or connive at his efcape from juffice. A fheriff or other judge, guilty of this crime, forfeits his life and goods. And even a private perfon, who takes theftbote, fulfers as the principal thicf. The buying of difputed claims, concerning which there is a pending procefs, by any judge or member either of the feffion or of an inferior court, is punifhed by the lofs of the delinquent's office, and all the privileges thcreto belonging.
15. Deforcement is the oppoition given, or refittance made, to meffengers or other officers, while they are employed in executing the law. The court of feflion is competent to this crime. It is punifhable with the confifcation of moveables, the one half to the king, and the other to the creditor at whofe fuit the diligence was uffed. Armed pcrfons, to the number of three or more, afifing in the illegal rumning, landing, or exporting of prohibited or uncuflomed goods, or any who fhall refif, wound, or maim any officer of the revenue, in the execution of his office, are panifhable with death and the confifcation of moveables.
Breach of
16. Breach of arrefment (fee No Ixxviii. 5.) is a arreftment. crime of the fame nature with deforcement, as it imports a contempt of the law and of our judges. It fubjects to an arbitrary corporal punifhment, and the efcheat of movcables; with a preference to the creditor for his debt, and for fuch farther fum as thall be modified to him by the judge. Under this head of crimes againft good government and police, may be reckon-
xoreftal-
king, \&c. ed the foreflalling of markets; that is, the buying of goods intended for a public market, before they are carried there ; which for the third criminal act infers the efcheat of moveables; as alfo flaying falmon in No $: 7^{8 .}$.
forbidden time, dellroying plough graith in time of tillage, flaying or houghing horfes or cows in time of harveft, and deftroying or fpoiling growing timber; as to the punifhment of which, fee itatutes $1503, c .72$. -1587, c. 82 . and 1689 , c. 16.-I Geo. I. St. 2. c. 48.
17. Crimes againt particular perfons may be di-Murder. rceted either againft life, limb, liberty, chaltity, goods, or reputation. Murder is the wilful taking away of a perfon's life, without a necelfary caufe. Our law makes no diftinction betwixt premeditated and fudden homicide: both are punifled capitally. Cafual homicide, where the actor is in fome degree blameable; and homicide in felf-defence, where the jult bounds of defence have been exceeded; are punifhed arbitrarily: but the flaughter of night-thieves, houfe-breakers, afo fiftants in mafterful depredations, or rebels denounced for capital crimes, may be committed with impunity. The crime of demembration, or the cutting off of a member, is joined with that of murder ; but in practice, its punifhent has been reftricted to the efcheat of moveables, and an affythment or indemnification ta the party. Mutilation, or the difibling of a member, is punifhed at the difcretion of the judge.
18. Self-murder is as highly crimilial as the killing Self-murour neighbour; and for this reafon, our law has, con- der. trary to the rule, crimina morte extinguuntur, allowed a proof of the crime, after the offender's death, that his fingle efcleat might fall to the king or his donatory. To this eod, an action muft be brought, not before the jufticiary, but the feffion, becaufe it is only intended aid civilem effetum, for proving and declaring the felf-murder ; and the next of kin to the deceafed mult be made a party to it.
19. The punifhment of parricide, or of the murder Parriciden of a parent, is not confined, by our law, to the criminal himfelf. All his pofterity in the right line are declared incapable of intheriting; and the fucceflion devolves on the next collateral heir. Even the curfing or beatingof a parent infers death, if the perfon guilty be above 16 years; and an arbitrary punithment, if he be under it. A prefumptive or llatutory murder is conllituted by 1690 , c. 21 . by which any woman who fhall conceal her pregnancy, duriug its whole courfe, and thall not call for, or make ufe of, help in the birth, is to be reputed the murderer, if the child be dead, or amiffing. This act was intended to difcourage the unnatural practice of women making away with their children begotten in fornication, to avoid church-cenfures.
20. Duelling, is the crime of fighting in fingle com-Ducliizg. bat, on previous challenges given and received. Fighting in a duel, without licence from the king, is punifhable by death; and whatever perfon, principal or fecond, fhall give a challenge to tight a duel, or fhall accept a challenge, or otherwife engage therein, is punifhed by banifhmert and efcheat of moveables, though no actual fighting fhould enfue.

2 1. Haimfucken (from bain "home," and focken "to Haimfuc. feek or purfue") is the affaulting or beating of a per- ken. fon in his own houfe. The punifhment of this crime is nowhere defined, except in the books of the Majelty, which make it the fame as that of a rape; and it is, like rape, capital by our practice. The affault muft be made in the proper houfe of the perfon affaulted. where
aw of where he lies and rifes daily and nightly; fo that neither a public houfe, nor even a private, where one is only tranfiently, falls within the law.
22. Any party to a law.fuit, who fhall fay, wound, or otherwife invade his adverfary, at any period of time between executing the fummons and the complete execution of the decree, or fhall be acceffory to fuch invafion, thall lofe his caufe. The fentence pronounced on this trial, againft him who has committed the battery, is not fubject to reduction, either on the head of minority, or on any other ground whatever: and if the perfon profecuted for this crime flall be denounced for not appearing, his liferent, as well as fingle efcheat, falls upon the denunciation.
23. The crime of zurongous imprifonment is inferred, by granting warrants of commitment in order to trial, proceeding on informations nut fubferibed, or without exprefling the caufe of commitment; by receiving or detaining prifoners on fuch warrants; by refufing to a prifoner a copy of the warrant of commitment; by detaining him in clofe confinement, above eight days after his commitment; by not releafing him on bail, where the crime is bailable; and by tranfporting perfons out of the kingdom, without either their own confent, or a Jawful fentence. The perfons guilty of a wrongous imprifonment are punifhed by a pecuniary mulet, from L. 6000 down to L. 400 Scots, according to the rank of the perfon detained; and the judge, or other perfon guilty, is over and above fubjected to pay to the perfon detained a certain fum per dicm, proportioned to his rank, and is declared incapable of public truift. All thefe penalties may be infilted for by a fummary action before the feffion, and are fubject to no modification.
24. Adultery, is the crime by which the marriagebed is polluted. This crime could neither by the Roman nor Jewifh law be committed, but where the guilty woman was the wife of another: by ours, it is adultery, if either the man or woman be married. We diltinguifh between fimple adultery, and that which is notorious or manifet. Open and manifeft adulterers, who continue incorrigible, notwithftanding the cenfures of the church, are punifhed capitally. This crime is diftinguifhed by one or other of the following characters : where there is iffue procreated between the adulterers; or where they keep bed and company together notoriouly; or where they give fcandal to the church, and are, upon their obftinate refufing to liften to its admonitions, excommunicated. The punillment of fimple adultery, not being defined by ita. tute, is left to the diferetion of the judge; but cuftom has made the falling of the fingle efcheat one of its penalties.
25. Bigamy, is a perfon's entering into the engagements of a fecond marriage, in violation of a former marriage-vow ftill fubfifting. Bigamy, on the part of the man, has been tolerated in many ftates, before the eftablifhment of Chiiftianity, even by the Jows themfelves; but it is prohibited by the precepts of the gofpel, and it is punifled by our law, whether on the part of the man or of the woman, with the pains of perjury.
26. Itef, is committed by perfons who fland within the degrees of kindred forbiuden in Lev. xviii. and is puninied capizally. The fame degrees are prohiVor. IX. Parc Iİ.
bited in affinity, as in confanguinity, Lev. xviii. 13. et feq. As this crime is repugnant to nature, all children, whether lawful or natural, fland on an equal footing : civilis ratio civilia jura carrumpere potef, non vero naturalia. It is difficult indeed to bring a legal proof of a relation merely natural, on the fide of the father ; but the mother may be certainly known without marriage.
27. There is no explicit flatute making rape, or the ravifhing of women, capital; but it is plainly fuppofed in act IGI2. c. 4. by which the ravifher is exempted from the pains of death, only in the cafe of the woman's fubfequent confent, or her declaration that fhe went off with him of her own free-will; and even then, he is to fuffer an arbitrary punifhment, either by imprifonment, confifcation of goods, or a pecuniary fine.
28. Theft is defined, A fraudulent intermeddling with the property of another, with a view of making gain. Our ancient lav proporticned the punifhment of the theft to the value of the goods flolen; beighteming it gradually, from a flight corporal puniflument to a capital, if the value amounted to thirty-two pennies Scots, which in the reign of David I. was the price of two fheep. In feveral latter acts, it is taken for granted, that this crime is capital. But where the thing ftolen is of fmall value, we confider it not as theft but as pickery, which is punifhed either corporally or by baniflment. The breaking of orchards, and the ftealing of green wood, is punifhed by a fine, which rifes as the crime is repeated.
29. Theft may be aggravated into a capital crime, though the value of the thing ftolen be trifing; as theft twice repeated, or committed in the night, or by landed men; or of things fet apart for facred ufes. The receivers and concealers of folen goods, knowing Refes of them to be fuch, fuffer as thieves. Thofe who barely ${ }^{\text {eheft. }}$ harbour the perfon of the criminal within 48 hours either before or after committing the crime, are punifhed as partakers of the theft. Such as fell goods belonging to thieves or lawlefs perfons who dare not themfelves come to market, are punifhed with banillment and the efcheat of moveables.
30. Theft attended with violence is called roblery; Robbery; and in our old ftatutes, rief or Routbrief; under which\&c. clafs may be included forning, or the taking of meat and drink by force, without paying for it. Stouthrief came at lait to be committed fo audaciouny, by bands of men affociated together, that it was thought neceffary to velt all our freeholders with a power of holding courts upon forners and rievers, and condemning them to death. Nay, all were capitally punifhed, who, to fecure their lands from depredation, payed to the rievers a yearly contribution, which got the name of black-mnail. An act alfo paffed, commanding to banifhment a band of forners, who were originally from Egypt, called gypfies, and adjudging to death all that fhould be reputed Egyptians, if found thereafter within the kingdom. Robbery committed on the feas is called piracy, and is punilhed capitally by the ligh admiral. Scveral of the facts which conftitute this crime are fet forth in a Britifh flatute, 8 Geo. I. c. 2.4.
31. Falfebood, in a large fenfe, is the fraudulent imi. Falfehood. tation or fuppreflion of truth, to the damage of another. The lives and goods of perfons convicted of ufiug falfe

Scotland. Scotland.

Forgery.
mercy: and their heirs could not inherit but upon a remiffion. The lateft ftatute agaialt this crime, punifhes it by confifcation of moveables. That particular fpecies of fallehood, which confifts in the fallifying of writings, paffes by the name of forgery. Our practice has now of a long time, agreeably to the Roman law, made this crime capital; unlefs the furgery b: of executions, or other writings of finalier moment; in which cafe, it is punifhed arbistarily.
32. The writing mult not only be fabricated, but put of ufe or founded on, in order to infer this crime. And though it be frictly criminal, yer the trial of it is proper to the court of feffion; but where improba. tion is moved 'againft a deed by way of exception, the inferior judge, be fore whom the action lies, is competent to it ad civilem effectum. When it is pleaded as an exception, our practice, to difcourage affected delays, obliges the defender, who moves it, to cenfign L. 40 Scots; which he forfeits, if his plea thall appear calumnious.
33. Where a perfon, found guilty of forgery by the court of feffion, is by them remitted to the jufticiary, an indicament is there exhibited againlt him, and a jury fwon, before whom the decree of felfion is produced, in place of all other evidence of the crime, in refpect of which the juryfind the pannel guilty; fo that that decree being pronounced by a competent court, is held as full proof, or, in the ityle of the bar, as probatio probata
Perjury.
34. Pirjury, which is the judicial affirmation of a falfehood on oath, really conltitutes the crimuen fulfz; for he who is guilty of it dues, in the moft tolemn manner, fubftitute falfehood in the place of truts. "Po conftitute this crime, the violation of truth muft be deliberately intended by the fwearer, and therefore reafonable allowatces ought to be given to forgetfulnefs or inifapphenenfion, according to his age, health, and other circumitances. The breach of a promiffory oath, does not infer this crime; for he who promifes on oath, may fincerely intend performance when he fwears, and fo cannot be faid to call on God to atteft a falfehood. Though an oath, however falfe, if made upon reference in a civil queftion, concludes the caufe, the perfon perjured is liable to a criminal trial; for the effect of the reference can go no further than the private right of the parties.
35. Notwithttanding the mifchievous confequences of perjury to fociety, it is not punifhed capitally. but by confifcation of moveables, imprifonment tor a year, and infamy. The court of feffion is competent to perjury incidenter, when, in any examination upon oath, taken in a caufe órpending before them, a perfon appears to have fworn falfely; but in the common cale, that trial is proper to the jufticiary. Subarnation of perjury conlifts in tampering with perfons who are to fwear in judgment, by directing them how they are to depofe; and it is punifhed with the pains of perjury.
Stellionate.
36. The crime of fielionate, from Rellio, includes every fraud which is not diftinguiftad by a fpecial name; but is chiefly applied to conveyances of the fame numerical right, granted by the proprietor to different difponees. Th punifhment of fellionate mult neceffarily be arbitrary, to adapt it to the various natures and different aggravations of the fraudulent aets.

The perfons guilty of that kind of it, which confits in granting double conveyances, are by our law declared Lawo infamous, and their lives and goods at the king's mercy. The cognifance of fraydulent bankruptcy is appropriated to the court of feffion, who may inflict any punifhment on the offender that appears proportioned to his guilt, death excepted.
37. The crime of ufury, before the reformation, confifted in the taking of any intereft for the ufe of money; and now in taking an higher rate of interel than is authorifed by law. It is divided into $u$ ura manifefa, or direet ; and velata, or covered. One may be guilty of the firit kind, either where he covenants with the debtor for more than the lauful interelt on the loan-money : or where one receives the interent of a fum before it is due, fince thereby he takes a confideration for the ufe of money before the debtor has really got the ufe of it. Where a debt is clogged with an uncertain condition, by which the creditor runs the hazard of lofing his fum, he may coveman: for an higher interelt than the legal, wit!out the crime of ufury ; for there, the intereft is nut given merely in confideration of the ufe of the moncy, but of the danger underaken by the creciitor.
38. Vovered ufury, is that which is committed under the mafk not of a loan but of fome other contract; e. g. a fale or an inproper wadiet. And in goneral, ail obligations entered into with an intention of getting more than the legal intereft for the ufe of money, however they may be difguiled, are ufuricus. As a farther guard againtt this crime, the taking more than the legal intereft for the forbearance of payment of muncy, merchandife, or other commodities, by way of loan, exchange, or other contrivance whatever, or the taking a bribe for the luan of money, or for delaying its payment when lent, is declared ufury. Where ufury is proved, the ufurious obligation is not only declared void, but the creditor, if he has received any unlawful profits, forfeits the treble value of the fums or goods lent. Ufury, when it is to be purfued criminally, muft be tried by the julticiary ; but where the libel concludes only for voiding the debt, or rellitution, the feffon is the proper court.
39. Injury, in its proper acceptation, is the reproaching or affronting our neighbour. Injuries are either verbal or real. A verbal injury, when directed againtt a private perfon, confitts in the uttering contumelious words, which tend to expofe our neighbour's character by making him little or ridiculous. It does not feem that the twitting one with natural defects, without any farcaltical reflections, though it be inhuman, falls under this defcription, as thefe imply no real reproach in the juft opinion of mankind. Where the injurious expreffions have a tendency to blacken one's moral characier, or fix fome particular guilt upon him, and are deliberately repeated in different companies, or handed about in whifpers to confidents, it then grows up to the crime of flander: and where a perfon's moral character is thus attacked, the animus injuriandi is commonly inferred from the injurious words themfelves, unlefs fpecial circumfances be offered to take off the prefumption, ex. gr. that the words were uttered in judgment in one's own defence, or by way of information to a magittrate, and had fome foundation in fact. Though the cognizance of Alander is proper to the commiffaries,
aw of miltaries, who, as the judices Chrifianitatis, are the only judges of fcandal; yet, for fome time paft, bare verbal injuries have been tried by other criminal judges, and even by the feffion. It is punifhed either by a tine, proportioned to the condition of the perfons injuring and injured, and the circumftances of time and place; or if the injury import fcandal, by publicly acknowledging the offence; and frequently the two are conjoined. The calling one a bankrupt is not, in Atrick Ipeech, a verbal injury, as it does not affeet the perfon's mooal character ; yet, as it may hurt his credit in the way of bufinefs, it founds him in an action of damages, which mult be brought before the judge-rrdinary. A real injury is inflicted by any fact by which a perfon's honour or dignity is affected; as friking one with a cane, or even aiming a blow without Atriking; spitting in one's face; affuming a coat of arms, or any other mark of diflinction proper to another, \&c. The compofing and publifhing defamatory libels may be reckoned of this kind. Real injurries are tried by the judge-ordinary, and punifhed either by fine or imprifonment, according to the demerit of the offenders.
40. After having fhortly explained the feveral crimes punihable by our law, this treatife may be concluded with a few obfervations on criminal jurifdiction, the forms of trial, and the methods by which crimes may be extinguifhed. Criminal juriddiction is founded, 1. Ratione domicilit, if the defender dwells within the territory of the judge. Vagabonds, who have no certain dsmicile, may be tried wherever they are apprehended. 2. Ratione delizi, if the crime was committed within the territory. Treafon is triable, by the Englifh law, in any county that the king fould appoint ; and, by a temporary act now expired, treafon committed in certain Scots counties, was made triable by the court of julticiary, wherever it Thould fit.
hat per- 41. No criminal trial can proceed, unlefs the perfon is are nut accufed is capable of making his defence. Abfents therefore canuot be tried; nor fatuous nor furious perfons, durante furore, even for crimes committed while they were in their fenfes. For a like reafun, minors who had no curators, could not, by the Roman law, be tried criminally; but our practice confiders every perfon who is capable of dole, to be alfo fufficiently qualified for making his defence in a criminal trial.
42. No perfon can be imprifoned in order to ftand trial for any crime, without a warrant in writing expreffing the caufe, and proceeding upon a fublcribed information, unlefs in the cafe of indignities done to judges, riots, and the other offences feccially mentioned in 1701.c.6. Every prifoner committed in order to trial, if the crime of which he is accufed be not capital, is entitled to be releafed upon bail, the extent of which is to be modified by the judge, not exceeding 12,000 merks Scots for a nobleman, 6000 for a landed gentleman, 2000 for every other gentleman or burgefs, and 600 for any other inferior perfon. That perfons who, either from the nature of the crime with which they are charged, or from their low circumitances, cannot procure bail, may not lie for ever in prifon untried, it is lawful for every fuch prifoner to apply to the criminal judge, that his trial may be brought on.

The judge mult, within 24 hours after fuch applica- Law of tion, iffue letters directed to meffengers, for intimating Scotland. to the profecutor to fix a diet for the prifoner's trial, within 60 days afier the intimation, under the pain of wrongous imprifonment : And if the profecutor does not infift within that time, or if the trial is not finifhed in forty days more when carried on before the Jufticiary, or in thirty when before any other judge; the prifoner is, upon a fecond application, ferting forth that the legal time is elapfed, catitled to his freedom, under the fame penalty.
43. Upon one's committing any of the groffer Precognicrimes, it is ufual for a juftice of the peace, fheriff, or tima other judge, to take a precognition of the facts, i.e. to examine thofe who were prefent at the criminal act, upon the fpecial circumitances attending it, in order to know whether there is ground for a trial, and to ferve as a direction to the profecutor, how to fet forth the facts in the libel ; but the perfons examined may infift to have their declarations cancelled before they give teftimony at the trial. Juftices of the peace, fheriffs, and magiftrates of boroughs, are alfo authorifed to receive informations, concerning crimes to be tried in the circuit-cuarts; which informations are to be tranfmitted to the juftice-clerk 40 days before the litting of the refpective courts. To difcourage groundlefs criminal trials, all profecutors, where the defender was abfolved, were condemned by flatute, in colls, as they fhould be moditied by the judge, and befides were fubjected to a fmall fine, to be divided between the fifc and the defender: And where the king's advocate was the only purfuer, his informer was made liable. This fufficiently watrants the prefent practice of condemning vexatious profecutors in a pecuniary mulet, though far exceeding the itatutory fum.
44. The forms of trial upon criminal accufations, Form of differ much from thofe obferved in civil actions, if we trial. except the cafe of fuch crimes as the court of feflion is competent to, and of leffer offences tried before inferior courts. The trial of crimes praceeds either upon indictnent, which is fometimes ufed when the perfon to be tried is in prifon; or by criminal letters iffuing from the fignet of the julliciary. In either cafe, the defender mult be ferved with a full copy of the indictment or letters, and with a lift of the witneffes to be brought againit him, and of the perfons who are to pafs on the inqueft, and 15 free days mult intervene between his being fo ferved and the day of appearance. When the trial proceeds upon criminal letters, the private profecutor mult give fecurity, at raifing the letters, that he will report them duly executed to the julticiary, in terms of 1535, c. 35 . ; and the defender, if he be mot already in prifon, is, by the letters, required to give caution, within a certain number of days after his citation, for his appearance upon the day fixed for his trial: And if he givcs none within the days of the cbarge, he may be denounced rebel, which infers the forfeiture of his moveables.
45. That part of the indictment, or of the criminal letters, which contains the ground of the charge againlt the defender, and the nature or degree of the puniflment he ought to fuffer, is called the libel. All libels muft be fpecial, fetting forth the particular facts inferring the guilt, and the particular place where
piets of appearance.
thefe facts were done. The tine of committing the crime may be libelled in more gencial terms, with a! alternative as to the month, or day of the month: but as it is net practicable, in moft cafes, to libel upon the precile circumftances of accuffin that may appear in proof, libels againtt acceffories are fuffcient, if they mention, in general, that the perfons profecuted are guilty art and part.
46. The defender in a criminal trial may raife letters of exculpation, for citing witneffes in proof of his defences againt the libul, or of his objections againft any of the jury or witneffes; which inult be ex. ecuted to the fame day of appearance with that of the indietment or criminal letters.
47. The dicts of appearance, in the court of juficiary, are peremptury: the criminal letters mutt be called on the very day to which the defonder is cited; and hence, if no aceufer appears, their effect is loik, inflatio perit, and new letters muit be raifu. If the libel, or any of the expentions, fhall tu the profecutor appear informal, or if he be diffident of the proof, from the abfconding of a meceflay witnefs, the court will, upon a motion made by him, defert the diet pro loco et tempore; after which new letters become alfo neceflary. A defender, who does not appear on the very day to which he is cited, is declared fugitive; in confequence of which, his fingle efcheat falls. The defender, afier his appearance in court, is called the pannel.
48. The two things to be chiefly regarded in a criminal libel, are, 1 . The relevancy of the facts, i.e. their fufficiency to infer the conclufion; 2. Their truth. The conlideration of the firlt belongs to the judge of the court ; that of the other, to the jury or aflize. If the facts libelled be found irrelevant, the pannel is difmiffed from the bar; if relevant, the court remits the proof thereof to be determined by the jury ; which mult confift of 15 men picked out by the court from a greater number not exceeding 45, who have been all fummoned, and given in lift to the defender at ferving him with a copy of the libel.
Probation of crime:defencer's oath ; for no perfon is compellable to fwear againft himfelf, where his life, limb, liberty, or ellate is concerned, nor eren in crimes which infer infamy; becaufe one's good wame is, in right eftimation, as valuable as hislife. There is one exception however to this rule in trying the crime of ufury, which may be proved by the ufurer's own oath, notwithftanding the rule, Nemo tenetur jurare in fuam turpitudinem. Crimes therefore are in the general cafe proveable only by the defencler's free confeffion, or by writing, or by witneffes. No extrajudicial confeffor, unlefs it is adbered so by the pannel in judgement, can be admitted as evidence.
50. All objections relcvant againtt a witnels in civil cafes are alfo rclevant in crimisal. No witnefs is ad- mitted, who may gain or lofe by the event of the trial. Socii criminis, or affociates in the fame crime, are not admitted againft one another, except either in crimes againlt the itate, as treafon; in occult crimes, where other witneffes cannot be had, as forgery ; or in thefts or depredations committed in the Highlands. 'ihe teltimony of the private party injured may be reccived againt the panuel, where the king's advocate
is the only profecutor. if from the nature of the crime, there muit needs be a penury of witneffes, as in rape, sobbery, \&c.
51. After all the witneffes Save been examined in Verdict count, the jury are fhut up in a room by themfelves, affife. uhere they muft continue, excluded from all correfpondence, till their verdict or judgment be fubferibed by the foreman (or chancellor) and clerk; and according to this verdict the court pronounces fentence, either abfolving or condemning. It is not neceffary, by the law of Scotland, that a jury fhould be unanimous in finding a perfon guilty ; the narroweft majority is as fufficient againft the pannel, as for him. Juries cannot be punified on acconnt of an erroneous verdict, either for or againft the pannel.
52. Though the proper bufinefs of a jury be to in. Powers quire into the truth of the facts found relevant by the a jury. connt, for which reafon they are fometimes called the inguef; yet, in many cafes, they judge alfo in matters of latw or relevancy. 'I'hus, though an objection againft a witnefs fhould be repelled by the court, the jury are under no neceflity to give more credit to his teftimony than they think ju!t: And in all trials of art and part, where fpecial facts are not libelled, the jury, if they return a general rudict, are indeed judges not only of the truth, but of the relevancy of the facts that are fworn to by the witneffes. A general verdict, is that which finds in general terms, that the pannel is guilty or not guilty, or that the libel or defences are proved or not proved. In a fpecial verdict, the jury finds certain facts proved, the import of which is to be afterwards conlidered by the courc.
53. Criminal judges mult now fufpend for fome Sentence time the execution of fuch fentences as affect life or limb, that fo condemned criminals, whofe cafes deferve favour, may have accefs to apply to the king for mercy. No fentence of any court of judicature, fouth of the river Forth, importing either death or demembration, can be executed in lefs than 30 days; and, if north of it , in lefs than 40 days, after the date of the fentence. But corporal punifhments, lefs than death or difmembering, e. g. whipping, pillory, Eoc. may be inflicted eight days after fentence on this fide Forth, and twelve days after fentence beyond it.
54. Crimes are extinguifhed, I. By the death of Extinctio the criminal: both becaufe a dead perfon can make of crime no defence, fo that his trial is truly a judging upon the hearing of one fide; and becaufe, though his guilt thould be ever fo notorious, he is after death carried beyond the reach of human penalties: Such trials therefore can have no effect, but to punifh the innocent heir, contrary to that molt equitable rule, Culpa tenet funs auliores. 2. Crimes may be extinguifhed by a remiflion from the fovereign. But a remiffion, tho ${ }^{\text { }}$ it lecures the delinquent from the public refentment, the exercife of which belongs to the crown, cannot cut off the party injured from his claim of damages, over which the crown has no prerogative. Whoever therefore foundsjon a remiffion, is liable in damages, to the private profecutor, in the fame manner as if he had been tried and found guilty. Even general acts of indemnity paffed in parliament, though they fecure againft fuch penalties as law inflicts upon the criminal nerely per modun pund, yet do not againtt the payment of any pecuniary fine that is given by ftatute

Law of to the party injured, inne againt the demand of any Scotland. claim competent to him in uame of damages.

5\%. Leffer injuries, wheh cannot be properly faid to after the public paace, may he extinguifhed, either by the private party's exprefly forgiving him, or by his heing reconciled to the offader, after receiving the injury: Hence arifes the rule, Diffomulatione ollitiar injuria. But where the offence is of a higlier nature, the party injured, though he may pais from the profecution, in fo far as his private intereft is concerned, cannot preclude the king's advocate, or procuratorfircal, from intitiling ad vindianan pullicam.
56. Crimes are alfo extinguilhed by prefcription, which operates by the mere lapfe of time, without any act ei her of the fovereign or of the private fufferer. Crimes prefcribe in 20 years; but in particular crimes, the prefeription is limited by flatute to a florter time. No perfon can be profecuted upon the act againt wrongous imprifonment. after three years. High treafon, committed within his majenty's dominions, fuffers likewife a trienuial prefoription, if indictment be not found againt the trator within that time. All actions
brought npon any penal fatute madc or to be made, where the penalty is appropriated to the crown, expire in two years after committing the offence; and where the penalty goes to the crown or other profecutor, the profecutor mult fue within one year, and the crown within two years after the year ended. Certain criness are, withour the aid of any Athate, extinguilled by a fhorter prefcription than twenty years. By our old law, in the cales of rape, robbery, and hamefueken, the party iujured was not heard after a filence of twenty-four hours; from a prefimption, that perfons could not be fo grofsly injured, without immediately complaining: And it is probable, that a profecution for thefe crimes, if delayed for any confiderable time, would be caft even at this day, or at lealt the punihment reftricted. Leffer injuries fuffer allo a hort prefcription; law preffuning forgivenefs, from the nature of the offence, and the filenee of the party. The particular fpace of time fufficient to eltablith this prefumption mult be determined by the judge, according to circumftances.

## L A W

Law
Larr-Language. In England all law-preceedings were formerly written, as indeed all publie proceedings were, in Norman or law Freuch, and even the argu. ments of the counfel and decifions of the court were in the fame barbarous dialect. An evident and fhameful badge, it nuft be owned, of tyranny and foreign fervitude; being introduces under the aufpices of William the Norman, and his fons: whereby the obfervation of the Ruman fatyrift was onee more verified, that Gallia caufulicos ducuit facunda Britannos. Thlis continued till the reign of Edward III.; who, having employed his arms fuccefffuilly in fubduing the crown of France, thought it uabefeeming the dignity of the victors to ufe any longer the language of a vanquifhed country. By a flatute, therefore, paffed in the 3 6th year of his reign, it was enactel, that for the future all pleas fhould be pleaded, thown, defended, anfwered, debated, and judged, in the Englifh tongue; but be entered and inroiled in Latin : In like manner as Don Atonfo X. king of Caltile (the great-grandfather of our Edward III.) obliged his fubjects to ufe the Caftilian tingue in ath legal proceedings; and as, in 1286, the German languase was etrablifhed in the coutts of the empire. And perhaps, if our legiflature had then directed that the writs themfelves, whieh are mandates from the king to his fubjects to perform certain acts or to appear at certain places, fhould have been framed in the Englifh language, according to the rule of our ancient liaw, it had not been very improper. But the record or enrolment of thofe writs and the proceedings thereon, which was calculated for the benefit of poiterity, was more ferviceable (becaufe more durable) in a dead and immutable language, than in any finx or living one. The practifers, however, being ufed to the Norman language, and therefore imagining they could exprefs their thou, hes more apty and more concifely in that than in any other, Aill continued to take their notes in law Freuch; and of courfe, when thofe notes came to be publifhed, under the denomination of $r$ :-

## L A W

ports, they were printed in that barbarousdialec; which, joined to the arlditional terrors of a Gothic black lettir, has occafioned many a tudent to throw away his Plowden and Listleton, without venturing to attaek a page of them. And yet in reality, upon a nearer acquaintance, they would have found nothing very formidable in the language; which ditiers in its grammar and orthography as much from the modern French, as the diction of Cnaucer and Gower does from that of Addifon and Pope. Befidrs, as the Englifh and Norman languages were concurrently ufed by our anceftors for feveral centurits together, the two idioms have naturally afimilated, and mutually borrowed fromeaeh other : for which reafon the grammatical conflruction of each is io very much the fame, that 1 apprehend an Enslifhman (with a week's preparation) wuld underAtand the laws of Normandy, collected in their grarod couffumier, as well, if not heite, than a Frenchnan bred within the wails of Patiz.
The Latin, which fucceeded the French for the entry and entolment of pleas, and which continued in ufe for four centuriss, aufwers io nearly to the Englih (oftentimes word for word) that it is not at all furpriling it thould generally be imagined to be totally fa. bricated at home, with little more art or trouble than by adding Roman teraniutions to Englifh words. Whereas in reality it is a very univerfal dialect, fpread threughout all Europe at the irruption of the northern mations; and particularly accommodated and nooulded to anfwer all the purpoles of the hawyers with a pect1liar exactnefs and precifion. This is principally owing to the finplicity, or (if the reader pleafes) the poverty and baldnefs of its texture, calculated to exprefs the ideas of mankind juft as they arife in the human mind, withont any rhetorical flouridnes, or perplexed ornaments of Ayle : for it may be obferved, that thofe laws and ordinances, nf public as well as private communities, are generally the moft cafily underttood, where Itrength and perfpicuity, not harmony or elegance of

Law- exprefion, have been principally confulted in compilanguage, ling them. Thefe northern nations, or rather their legiflators, though they refolved to make ufe of the Latin tongue in promulging their laws, as being more durable and more generally known to their conquered fubjects than their own Teutonic dialeets, yet (either through choice or neceffity) have frequently intermixed thercin fome words of a Gothic original ; which is, more or lefs, the cafe in every country of Europe, and therefore not to be imputed as any peculiar blemifh in our English legal latinity. The truth is, what is generally denominated lazw-Latin is in reality a mere technical language, calculated for eternal duration, and eafy to be apprehended both in prefent and future times; and on thofe accounts beft fuited to preferve thofe memorials which are intended for perpetual rules of action. The rude pyramids of Egypt bave endured from the earlief ages, while the more modern and more elegantettructures of Attica, Rome, and Palmyra, have funk beneath the lloke of time.

As to the objection of locking up the law in a ftrange and unknown tongue, this is of little weight with regard to records; which few have occafion to read, but fuch as do, or ought to, underfland the rudiments of Latin. And befides, it may be obferved of the lawLatin, as the very ingenious sir John Davis obferves of the law-French, "that it is fo very eafy to be learned, that the meaneft wit that ever came to the fludy of the law doth come to underfand it almoft perfectly in ten days without a reader."

It is true, indeed, that the many terms of art, with which the law abounds, are fufficiently harfh when Latinized (yet not more fo than thofe of other fciences), and may, as Mr Selden obferves, give offence "to fome grammarians of fqueamilh fomachs, who would rather choofe to live in ignorance of things the moft ufeful and important, than to have their delicate ears wounded by the ufe of a word unknown to Cicero, Sallutt, or the other writers of the Auguftan age." Yet this is no more than mult unavoidably happen when things of moderu ufe, of which the Romans had no idea, and confequently no phrafes to exprefs them, come to be delivered in the Latin tongue. It would puzzle the moft claffical fcholar to find an appellation, in his pure Latinity, for a conftable, a record, or a deed of feoffment: it is therefore to be imputed as much to neceffity as ignorance, that they. were flyled in our forenfic dialect, confabuharius, recordum, and feoffamentum. Thus again, another uncouth word of our ancient laws (for I defend not the ridiculous barbarifins fometimes introduced hy the ignorance of modern practifers), the fubfantive murdrum, or the verb murdrare, however liarfh and unclaffical it may feenn, was necelfarily framed to exprefs a particular offence; fince no other word in being, occidere, interficere, necare, or the like, was fufficient to exprefs the intention of the criminal, or quo animo the act was perpetrated; and therefore by no means came up to the notion of murder at prefent entertained by a law ; viz. a killing wuith malice aforethought.

A fimilar neceflity to this produced a fimilar effect at Byzantium, when the Roman laws were turned into Greek for the ufe of the oriental empire: for, without any regard to Attic elegance, the lawyers of the im. perial courts made no feruple to tranfate fidei commif.

 and the like. They fludied more the exact and precife import of the words, than the neatnefs and delicacy of their cadence. And it may be fuggelted, that the terms of the law are not more numerous, "more uncouth, or more difficult to be explained by a teacher, than thofe of logic, phyfics, and the whole circle of Ariftotle's philofoplyy; nay, even of the politer arts of architecture and its kindred fludies, or the fcience of rhetoric itfelf. Sir Thomas More's famous legal queftion contains in it nothing more difficult, than the detinition which in his time the philofophers currently gave of their natatria prima, the groundwork of all natural knowledge ; that it is neque quid, neque quantum, neque quale, neque aliquid eorum quibus ens determinatur; or its fubfequent explanation by Adrian Hecreboard, who affures us, that materia prima non efl corpus, neque per formam corporeitatis, neque per finplicem effentiann: eft tamen ens, et quidem fubfantia, licet incomplea; ; babetque actume ex fe entitativum, et fomul oft potentia fubjeciiva. The law, therefore, with regard to its technical phrafes, Itands upon the fame footing with other fludies, and requetts only the fame indulgence.

This technical Latin continued in ofe from the time of its firft introduction, till the fubverfion of our ancieut conftitution under Cronwell; when, among many other innovations in the law, fome for the better and fome for the worfe, the language of our records was altered and turned into Englihh. But, at the reltoration of king Charles, this novelty was no longer countenanced; the practifers finding it very difficule to exprefs themfelves fo concifely or fignificantly in any other language but the Latin. And thus it continued without any fenfible inconvenience till about the year 1730 , when it was again thought proper that the proceedings at law fhould be done into Englifh, and it was accordingly fo ordered by ltatute 4 Geo. 1I. c. 26 . This was done, in order that the common people might have knowledge and underlanding of what was alleged or done for and againlt them in the procefs and pleadings, the judgment and entries in caufe. Which purpofe it is doubtful how well it has anfwered; but there is reafon to fufpect, that the people are now, after many years experience, altogether as ignorant in matters of law as before. On the other hand, thefe inconveniences have already arifen from the alteration; that now many clerks and attcrneys are hardly able to read, much lefs to underHand, a lecord even of fo modern a date as the reign of George I. And it has much enhanced the expence of all legal proceedings : for fince the practifers are confined (for the fake of the flamp-duties, which are thereby conliderably increafed) to write only a flated number of words in a fleet; and as the Englifh language, through the multitude of its particles, is much more verbofe than the Latin ; if follows, that the number of nisets mult be very much augnented by the clange. The trandation alfo of technical phrafes, and the names of writs and other procefs, were found to be fo very ridiculous (a writ of nifi prius, quare impedit, ferifacias, babeas corpus, and the relt, not being capable of an Englifh drefs with any degree of feriouf. nefs), that in two gears time a new act was obliged to

## L A W [ 727 ] L A W

Law. be made, 6 Geo. II. c. 14. which allows all technical words to continue in the ufual language, and has thereby defeated every beneficial purpofe of the former flatute.

Trial by Wager of Larr, (vadiatio legis; ) a fpecies of trial, in the Englifh law, fo called, as another fpecies is ftyled " wager of battel," vadiatio duelli, ( (ee BATtel): becaufe, as in the wager of hattel, the defendant gave a pledge, gage, or vadium. or try the caufe by battel; fo here he was put in fureties or vadios, that at fuch a day he will make his law, that is, take the benefit which the law has allowed him, (fee the article Trias). For our anceftors confidered, that there were many cafes where an innccunt man, of gond ere. dit, might be overborne by a multitude of falft witneffes; and therefore efablifhed this fpecies of trial, hy the oath of the defendant himfelf: for if he will abfolutely fwear himfelf not chargeable, and appears to be a perfon of reputation, he thall go free, and for ever acquitted of the debt, or other caufe of action.

The manner of waging and making law is this. He that has waged, or given fecurity, to make his law, brings with him into court eleven of his neighbours: a cultom which we find particularly deferibed fo early as in the league between Alfred and Guthrun the Dane; fer by the old Saxon conftitution every man's credit in courts of law depended upon the opinion which his neighbours had of his veracity. The defendant then, ftanding at the end of the bar, is admonifhed by the judges of the nature and danger of a falfe oath. And if he till perfifts, he is to repeat this or the like oath: "Hear this, ye juftices, that I do not owe unto Richard Jones the fum of ten pounds nor any penny thereof, in manner and form as the faid Richard hath declared againft me. So help me God." And thereupon his eleven neighbours or compurgators thall avow upon their oaths, that they believe in their confciences that he faith the truth; fo that himfelf mult be fworn de fidelitate, and the eleven de creduhitate.

In the old Swedifh or Gothic conflitution, wager of law was not only permitted, as it is in criminal cafes, unlefs the fact be extremely clear againft the prifoner; but was alfo abfolutely required, in many civil cafes: which an author of their own very juflly charges as being the fource of frequent perjury. This, he tells us, was owing to the Popifh ceclefiaftics, who introduced this method of purgation from their canon law; and, having fown a plentiful crop of oaths in all judicial proceedings, reaped afterwards an ample harveft of perjuries: for perjuriss were punilhed in part by pecuniary fines, payable to the coffers of the church. But with us in England wager of law is never required; and then only admilted, where an action is brought upon fuch matters as may be fuppofed to be privately tranfacted between the parties, and where. in the dcfendant may be prefumed to have made fatisfaction without being able to prove it. Therefore it is only in actions of dibt upon fimple contract, or for amercement, in actions of detinue, and of account, where the debt may have been paid, the goods reftored, or the account balanced, without any evidence of either. And by fuch wager of law (when admitted) the plaintiff is perpetually barred; for the law, in the himplicity of the ancient times, prefumed that no one
would forfwear himfelf for any worldly thing. Wager of law, however, lieth in a real action, where the tenant alleges he was not legally fummoned to appear, as well as in mere perfonal contracts.

The wager of law was never permitted but where the defendant bore a fair and unreproachable character; and it was alfo confined to fuch cafes where a debt might be fappofed to be difcharged, or fatisfaction made in private, without any witneffes to atteft it: and many other prudential reftrictions accompanied this indulgence. But at length it was confidered, that (even under all its reflrictions) it threw too great a temptation in the way of indigent or profligate men: and therefore by degrees new remedies were devifed, and new forms of action were introduced, whercin no defendant is at liberty to ware his law. So that now no plaintiff tueed at all apprehend any danger from the hardınefs of his debtor's c~nfcience, unlefs he voluntarily choofes to rely on his adverfary's veracity, by bringing an ohfolete, inftead of a modern, action. Therefore, one fhall hardly hear at prefent of an action of debt brought upon a fimple contract : that being fupplied by an action of trefpafs on the cafe for the breach of a promife or afumpfot; wherein, thouglt the fpecific debt cannot be recovered, yet damages may, equivalent to the \{pecific debr. And, this being an action of trefpafs, no law can be waged therein. So, initead of an action of detinue to recover the very thing detained, an action of trefpafs on the cafe in trover and converfion is ufually brought; wherein, though the horfe or other fpecific chattel cannot be had, -yet the defendant flall pay damages for the converfion, equal to the value of the chattel; and for this trefpafs alfo no wager of law is allowed. In the room of actions of account, a bill in equity is ufually filed: wherein, though the defendant anfwers upon his oath, yet fuch oath is not conclufive to the plaintiff; but he may prove every article by other evidence, in contradiction to what the defendant has fivorn. So that wager of law is quite cut of ufe, being avoided by the mode of bringing the action ; but ftill it is not out of force. And thercfore, when a new flatute inflicts a penalty, and gives an action of debt for recovering it, it is $u$ fual to add, "in which no wager of law fhall be allowed:" otherwife an hardy delinquent might efcape any penalty of the law, by fwaring he had never incurred, or elfe had difclarged it.

Cuflom-Houfe Latrs. The expedient of exacting duties on goods imported, or exported, has betn adupted by every commercial nation in Europe. The attention of the Britifh legiflature has not been confined to the object of raifing a revenue alone, but they have attempted by duties, exemptions, drawbacks, buunties, and other regulations, to direct the national trade into thofe channcls that contribute moft to the public benefit. And, in order to obtain every requilite information, all goods, expurted or imported, whether liable to dnty or not, are required to be entered at the lefpective cuftom honfes; and, from thefe entries, accounts are regularly made up of the whole Britifh trade, dillinguifhing the articles, their quantity and value, and the countries which fupply or receive them.
The objects of the Britifh legiflature may be reduced to the following heads:

Cuftome

Firf, To encourage the employment of Britifh fhipping and feamen, for the purpofe of fupplying our navy when public exigencies require.

Secondly, To increafe the quantity of money in the nation, by prohibiting the exportation of Britifh coin, by encourazing exportation, and difcouraging importation, and by promoting agriculture, fifheries, and manufactures. For thefe purpofes, it is penal to en. tice certain manufacturers abroad, or export the tools ufed in their manufactures; the exportation of raw materials is, in moft inflances, prohibited; and their importation permitted free from duty, and fometimes rewarded with a bounty. The exportation of fome goods, manufactured to a certain length only (for example white cloth), is loaded with a duty, but permitted duty-free when the manufacture is carried to its full extent. The importation of rival manufactures is loaded with heavy duties, or abfolutely prohibited. Thefe reftrictions are molt fevere towards nations with which the balance of trade is fuppofed againtt us, or which are confidered as our molt formidable rivals in power or commerce. Upon this pienciple the comnerce with France, till lately, laboured under the lieavielt reftrictions.

Thirdly, To fecure us plenty of neceffaries for fubfiftence and manufacture, by difcouraging the exportation of fome articles that confume by length of time, and regulating the corn-trade according to the exigencies of the feafons.

Fourthly, To fecure the trade of the colonies to the mother-country, and preferve a mutual intercourfe, by encouraging the produce of their \{laplecommodities, and reftraining their progrefs in thefe manufactures which they reccive from us in exchange.

## Hamiltan's

The foundation of our commercial regulations is the famous act of navigation, which was firlt enacted during the time of the commonwealth, and adopted by the firt parliament after the reftoration. The lubftance of this act, and fubfequent amendments, is as follows.

1. Goods from Afia, Africa, and America, may not be imported, except in Britifh fhips duly navigated, or Mips belonging to the Britifh plantations; and they can only be imported from the place of their production or manufacture, or the part where they are ufually firft fhipped for tranfportation. Goods of the Spanifh or Portuguefe plantations, imported from Spain and Portugal in Britifh hips, bullion and fome other inconfiderable articles are exeepted.

The reftriction on European goods is not univerlal, but extends to feveral of the bulkieft articles. Ruftian goods, mafts, timber, boards, falt, pitch, rofin, tar, hemp, flax, raifins, figs, prunes, olives, oil, corn, fugar, potafhes, wine, and vinegar, may not be imported, except in hips belonging to Great Britain or Ireland, legally manned; nor Turkey goods and currants, except in hips Britifh built ; or in hips belonging to the country where thefe goods are produced or manitfactured, or firt flipped for exportation ; and, if imported in foreign thips, they pay alien's duty.

In order to intitle a fhip to the privileges of a Britifh fhip, it mult be built in Britain, and belong entirely to Britih fubjects; and the maller, and theecfourtis of the mariners, mult bc Britifh fubjects, except in cafe of death, or unavoidable accidents. In
. $\mathrm{N}^{\circ} \mathrm{I} 79$.
time of war, the proportion of Britith mariners requited is generally confined to one-fourth; and the fame proportion only is required in the Greenland fifhery.

No goods may be imported into, or exported from, the plantations in Afia, Africa, or America, except in Thips built in Britain, Ireland, or the plantations, or prize- ीnips, manned by Britifh fubjects, duly re. gittered, and legally navigated.

The following goods, enumerated in the act of navigation and fubfequent acts, may not be exported from the plantations, except to fome other plantation or to Britain : 'Tobacco, cotton-wool, indigo, ginger, fultic, and other dying wood, molaffes, hemp, copperore, beaver-fkins and other furs, pitch, tar, turpentine, mafts, yards, and bolfprits, coffee, pymento, co-coa-nuts, whale-fins, raw filk, pot and pearl afhes. Rice and fugar were formerly comprehended in this lif, but their exportation is now permitted under certain reftrictions.

Iron may not be imported to Europe, except to Ireland; and none of the non-enumerated may be imported to any country north of Cape Finiftcrre, except the Bay of Bifcay and Ireland.
2. For the more effectual prevention of finuggling, no goods may be imported in veftels belonging to Britifh fubjects, and no wine, in any veffel whatever, un. lefs the malter have a manifeft on board, containing the name, meafure, and bult of the Mip, the place to which it belongs, and a diftinct enumeration of the goods on board, and places where they were laden. If the fhip be cleared from any place under his Majefly's dominions, the manifelt mult be attelted hy the chief officer of the cuftoms, or chief magiftrate, who is required to tranfmit a copy thereof to the place of deftination. Ship-malters mult deliver copies of this manifeft to the firlt cultom-houfe officer who goes on board within four leagues of the fhore, and alfo to the firlt who goes on board within the limits of any port, and muft deliver the original manifeft to the cuftomhoufe at their arrival, and make report of their cargo upon oath. If the report difagree with the manifett, or either difagree with the cargo on board, the flipmalter is liable in the penalty of $L_{.} 200$. The proprictors of the grods muft enter them, and pay the duties within 20 days; otherivife they may be carried to the cuftom-houfe, and fold by auction, if not relieved within fix months; and the overplus of the value, after paying duty and charges, paid to the propric. tors.
3. The importation of cattle, heef mutton, and pork, except from Ireland, woollen cloths, malt, and various articles of hareware, curlery, and carthen ware, is prohibited: Alfo the following gaods from Germany and the Netherlands; olive oil, pitch, tar, potafhes, rofin, falt, tobacco, wines, except Rhenifh wine, and Hungary wines from Hamburgh.
4. The importation of various other goods is reAricted by particular regulations refpecting the time and place of importation, the packages, the burden of the fhip, the requifition of a licence, and other circumftances.

To guard more effectually againft clandeftine trade, the importation of fome articles is only permitted in Thips of a certain burden, whofe operations are not eafily concealed. Spirits mult be imported in fhips of

## I A W [ 720 ] I A W

100 tons or upwards, except rum, and fpirits of Britifh plantations, which are only refticted to 70 tons; wine, 60 tons; tea, tobacco, and fnuff, 50 tons; falt, 40 tons. Wine, fpirits, ard tobacco are alfo reflricted in refpert of the packages in which they may be imported.
5. Diamonds and precious ftones, flax, flax feed, linen-rags, beaver-wool, wool for clothiers, linen yarn unbleached, and moft drogs ufed in dying, may be imported duty free.
6. All goods imported are liable to duties, except fuch as are exprefsly exempted. The revenue of cufoms is of great antiquity in Britain, but was newmodelled at the reftoration of Charles II. A fubfidy of tonnage on wines, and of poundage, or 1 s . per pound value of other goods, was granted during the king's life, and, after feveral prolongations, rendered perpetual. A book of rates was compofed for afcertaining thefe values; and articles not rated paid duty according to the value, as affirmed upon oath by the importer. If the goods be valued too low by the importer, the cuftom-houfe officer may fcize them, upon paying to the proprictor the value he fwore to, and 10 per cent. for profit; fuch goods to be fold, and the overplus paid into the cuftoms. Various additional duties have been impofed; fome on all goods, fome on particular kinds; fome according to the rates, fome unconnected with the rates; fome with an allowance of certain abatements, fome withont any al. lowance; the greater part to be paid down in ready money, and a few for which fecurity may be granted; often with variztions, according to the fhip's place and circumftances of importation. The number of branches amounted to upwards of 50 ; and fometimes more than 10 were chargeable on the fame articles. $13 y$ this means, the revenue of the cultoms las be-
come a fubject of much intricacy. The inconvenien. ces which this grave rife to are now removed by the confolidation act ; which appoints one fixed duty for each article free from fractions, inftead of the various branches to which they were formerly fubject.
7. Goods of moft kinds may be exported duty free when regularly entered; and thofe that have paid duty on importation arc generally intitled to drawback of pait, fometimes of the whole, when reexported within three years, upon certificate that the duties were paid on importation, and oath of their identity. In fome cales, a bounty is given on manufactured goods, when the materials from which they are ma. nufactured have paid duty on importation; and manufactures fubject to excife, have generally the whole or part of the excife duties returned.
8. The following goods are prolibited to be ex. ported; white-afhes, horns, unwrought hides of blackcattle, tallow, coin, brafs, copper, engines for knitting flockings, tools for cotton, linen, woollen, filk, iron, and fteel manufactures; wool, woolfells, woollen yarn, fullers earth, fulling clay, and tobacco pipeclay.
9. The object of the laws refpecting the corn trade is to encourage argriculture, by not only permitting the free exportation, but rewarding it with a bounty when the prices are low, and checking the importation by a heary duty ; and, to prevent fcarcity, by prohibiting the exportation when the prices are ligh, and permitting importation at an ealy duty. Various temporary laws have been enacted for thefe purpofes, and fometimes other expedients employed in times of fcarcity, fuch as prolibiting the diftillery from corn, and manufacture of flarch: And by a permanent law 1773, the low duties and bounties are regulated as under:

Bounty.

ring and Newfoundland fifheries, and in the fouthern whale filhery.

It is unneceffary and impracticable, in this place, to enter into a full detail of our cuftom-houle laws. Indeed, all that can be admitted into a work of this kind, mult convey but very imperfect information; and even that little becomes ufelefs in a fhort time from alterations in the law. We have therefore only marked the general outlines in the prefent article; which, however, will be fufficient to enable the reader to judge of the principles upon which the Britifh leginature has acted. How far the means employed have contributed to the ends propofed, and how far the ends themfelves are always wife; or whether a trade encumbered by fewer reftricions would not prove more exterfive and beneficial; luas been a fubject of much difcuffion : and of late a more liberal fyften lias been embraced in our commercial treaty with France, and in otber regulations.

Mercantile Latss. The law's relating to commercial and maritime affairs approach nearer to uniformity

4 Z through

# I. A W 

through the diffeent eountries of Europe, than thofe on other fubjects. Some of the fundamental regulations have been taken from the Roman law; others have been fuggetled by experience, during the progrefs of commerce; and the whole have been gradualIy redueed to a fyitem, and adopted into the laws of trading nations, but with fome local varieties and exceptions.

The Britih leginature has enacted many fitatutes re. fpecting commerce ; yet the greater part of our mercantile law is to be collected from the decifions of our courts of juttiee, founded on the curtsm of merchants. A proof of fuch cuftom, where no direct fatute interferes, determines the controverfy, and beeomes a precedent for regulating like cafes afterwards. The exillence of a cultom not formerly recognifed, is, in Eingtand, determined by a jury of merchants.

The moft common mercantile contracts are thofe hetween buyer and feller; between factor and employer; between partners; between the owners, matters, naariners, and freighters of ihips; between infurers and the owners of the fubject infured; and between the jarties concerned in tranfacting bills of exchange. See Factorage, Sile, Partnership, Insurance, Bile, \&c. and the next article.

Maritime Lavrs. The mott ancient fyttem of maritime laws is that of Rhodes, which was in force during the time of the Grecian empire, and afterwards incorporated into the Roman law. Although, in fome parts, not applicable to the prefent flate of trade, and, in others, nowlaardly intelligible, it contains the groundwork of the molt equitable and beneficial sules obferved in modern commerce. A like fyitern was fet forth by Richard I. of England, called the Siututes of Olicon; and another, by the town of Wilby, in the ifland of Gothand. From thefe fyltems, improved and enlarged in the courfe of time, out gencral maritime law is derived. The jurifdiction of matters purely maritime belongs, in Englad, to the court of admiralty, which proceeds on the civil law; but their proceedings are fubjer to the controul, and their decifions to the review, of the fuperior courts.

We fiall here confider the obligations which fubfitt between the mafters or owners of Mhips, the freighters, and the furnifiers of provitions or repairs.

1. Mryfers and Frighbers. A charter-party is a contraa between the mafter and freighters, in which the flip and voyage is defcribrd, and the time and conditions of performing it are afcertained.

The freight is moft frequently determined for the whole voyage, without refpect to time. Sometimes it depends on the time.
In the former cafe, it is either fixed at a certain fum for the whole cargo; or fo much per ton, barrel-bulk, or other weight or meafure; or fo much per cent. on the value of the cargo. This laft is common on goods fent to America; and the invoices are produced to afcertain the value.

The burden of the hip is generally mentioned in the contract, in this manner, one bundred tons, or therely; and the number mentioned ought not to differ above 5 tons, at moft, from the exact meafure. If a certain fum be agreed on for the fieight. of the hip, it mult all be paid, although the hip, when meafured, frould prove lefs, unlefs the burden be warranted. If the
thip be freighted for tran/porting eattle, or flaves, at fo much a head, and fume of then die on the paitage, freight is only due for fuch as are delivered alive; but, if for ladtng them, it is due for all that were put on board.

When a whole frip is freighted, if the mater fuffers any other goods befides thele of the treighier to be puc on buard, he is liable for dand ges.

It is common to meution the number of days that the fhip thall continuc at each port to load or unload. The expreffou ufed is, work we:ather diys; to fignify, that Sundays, holidays, and days when the weather ftups the work, are not reckuned. If the hip be detained longer, a daily allowance is often agreed on; in name of titnuirrase. .

If the voyage be completed in terms of the agreement, without any misfortune, the mater has a right in demand payment of the freight before he delivers the goods. But if the Cafe delivery be prevented by any fault or aceident, the parties are liable, accordivg to the following rules.

If the merehant do not load the mip within the time agreed on, the mater may engage with another, and recover damages.

If the merchame load the fhip, and reeal it after it has fet fruil, he mult pay the whole fruight; but if he unload it before it fets fail, he is lintle for damages only.

If a merchant londs goods wisich it is not lawful to export, and the filip be prevented from proceediug on that account, he mutt pay the freight notwithftanding.

If the fhipmatter be not ready to proceed on the voyage at the time agreed on, the merchant may load the whole, or part of the eargo, on board another fhip, and recuver danages; but chance, or notorious accident, by the marine law, releafes the matter from damages.

If an embargo be laid ofi the hip before it fails, the eharter-party is difolved, and the merchant pays the expence of loading and unloiding; but if the embargo be only for a thort linnited time, the voyage fhall be performed when it expires, and neither party is liable for damages.

If the thipmafter fails to any other port than that agreed on, without neceffity, he is liable for damages; if through neeeffity, he nuit fail to the port agreed on? at his own expence.

If a hip be taken by the enemy, and retakes or ranfomed, the charter-party eontinues in force.

If the mafter transfer the goods from this own fhip to another, withont necelfity, and they perifh, he is liable for the value; but if his own flaip be in imminent danger, the goods may be put oa board another thip at the riks of the owner.

If a fhip be freighted out and home, and a fam agreed on for the whole voyage, nothing is due till it return; and the whole is loit if the Mip be loft on the return.

If a certain fum be fpecified for the homeward voyage, it is due, although the factor abroad thould have no goods to fend home.

In the cafe of a fhip freighted to Madeira, Carolina, and home, a particular freight fixed for the home. ward voyage, and an option referved for the factur at

Carolina

## I A W

savy. Caroina to decline it, unlefs the fhip arriued before Ill of March : the firmanter, forcfecing lie could not arrive there within that lime, and might be difappointed of a freight, did not go thert at all. Ife was found liable in damages, as the obligation was abfolute on his part, and concitional only on the other.

If the groos be damaced without fault of the hip or mafter, the owner is not oblized to receive them and pay freight, but he mull eithar receive the whale, or abandon the whole; he cannot choofe thofe that are in beft order, and reject the others. If the goods be damaged through the infuficiency of the thip, the malier is liable for the fame; but, if it be owing to \{trefs of weather, he is not accountable. It is cullomary for mipmallers, when they fufpect damage, to take a froteft ascing wind ond worather at their arrival. But as this is the declaration of a party, it does ant bear credit, unlefs fupported by cellateral circum--fanees.

If part of the goods be thrown over-boad, or taZen by the enemj. the part delivered pays freish:

The Mipmatter is accountable for all the goods received on board, by himfelf or mariners, unlefs dhey perifh by the act of Gor, or of the king's enemies.

Shipmafters are not liable for leakage on liquors; nor accountable for the contents of packages, unkfs packed and delivered in their prefence.

Upon a principle of equity, that the labourer is worthy of his hire, differences arifing with regard to freight, when the cafe is doubtful, ought rather to be determined in faour of the fhipmatter.
2. Ship and Owners with Creai'ors. When debts are contracted fur provifions or repairs to a flip, or arife from a failure in any of the above mentioned obligarions, the fhip and tackle, and the owners, are liable for the debt, as well as the mafter.

By the mercantile law, the owners are liable in all eafes, without linitation; but by flatute, they are not liable for embezzlement beyond thacir value of fhio, tackle, and freight.

A hipmafter may pledge his fhip for neceflary repairs during a voyage; and this hypothecation is implied by the maritime law when fuch debts are contracted. This regulation is neceffary, and is therefore adopted by all commereial nations; for, otherwife, the mafler might not find credit for nect fary repairs, and the fhip might be loft. If repairs be made at different places, the lait are preferable.

The relief againtt the thip is competent to the count of admiralty in England, only when repairs are furnifhed during the courfe of a voyage; for the neceflity of the cale extends no further If a hip be repaired at home ( $e_{0} g$, cpon the river Thames), the creditor is only intitled tu relief at common law.

The ereditor may fue rither the mafeers or owners; but if he undertook the work on the fpecial promife of she one, the other is not liable.

If the mafler buys provifions on credit, the owners are liable for the debt, though they have given him money to pay them.

If a mip be mortgaged, and afterwards loft at fra, the owners mult pay the debt; for the mortgage is ouly an additional fecu, ity. though there be no cxprefs words to that purpofe in the corenant.

If a thip be taken by the enemy, and ranfomed, the Law. owners are liable to pay the ranfom, thoubh the ran. fomer die in the hands of the captors.
3. Owns's of fisip and cargo midh cach other. There is a mutual whligation which fublifts Letween all the owners of a firip and cargo. In time of danger, it is often neecfary to incur a certain lofs of pait for the grater fucurity of the rett : to cut a cable; to lighten the fhip, by throwing part of the groods ovet:board: to run it anore; or the like: and as it is unreafonable that the owners of the thing expofed for the commou forcty fould bear the whole lofs, it is defrayed by an equal contribution amono the profrietors of the fhip, cargo, and freight. This is the famous Lex. Rbodia de jafu, and is now called a general arerage.

The cuftom of valuing goods which contribute to a general average, is not uniform in all plaees. They are generally valued at the price they yield at the pore of deftiration, charges deducted; and goods throum overbaard are valucd at the price they would have yiulded there. Sailors wages, cloaths and money belonging to paffengers, and goods belonging to the king, pay no gencral average ; but ptoprictors of gold and filver, in cafe of goods being thrown overboard, contribute to the full extent of their interelt.

The following particulars are charged as general average: Damage fullained in an engagement with the enemy; attendance on the wounded, and rewards given for \{ervice in time of danger, or gratuities to the widows or children of the flain ; ranfom; goods given to the enemy in the nature of ranfom; charges of bringing the fhip to a place of fafety when in danger from the enemy, or waiting for convoy ; charges of quarantine; goods thrown overboard; mafts or rigging cut; holes cut in the fhip to clear it of water; pilotage, when a lake is fprung; damage, when voluntarily run aground, and expence of bringing it afloat; goods lof by being put in a lighter; the long boat loft in lightening the fhip in time of danger; bire of edbles and anchors; charges of laying in ballalt, victualug, and guarding the fhip when detained ; charges at law, in reclaiming the fhip and'cargo; interelt and commiffion on all thefe deburfements.

Though goods put on board a lighter, and loft, are charged as a gencral average; yet if the lighter be faved, and the hip with the reft of the goods be loft, the goods in the lighter belong to their refpective proprietors, without being liable to any contribucion.

If part of the goods be plundered by a pirate, the proprictor or mipmatler is not intitled to any contribution.

The effential circumffances that conftitute a general average are tbefe; the lofs mult be the effect of a voluntary action ; and the object of that action the common fafety of the whole. Quarantine, which is allowed, feems not to fall within this defcription.

Game-Lairs. Sce the article Game。
Sir William Blackanc, treating of the alterations in our laws, and mentioning franchifes granted of chafe and free warren, as well to preferve the breed of ani-
1.aw. mals, as to indulge the fubject, adds, "From a fimilar principle to which, though the forelt laws are now mitigated, and by degrees grown entirely obfolete; yet from this root has fprung a baftard flip, known by the name of the game law, now arrived to and wantoning in its hightet vigour: both founded upon the fame unreafonable notion of permanent property in wild creatures; and both productive of the fame tyranny to the commons; but with this difference, that the foreft laws eflablifhed only one mighty hunter throughout the land; the game laws bave raifed a little Nimrod in every manor. And in one refpect the ancient law was much lefs unreafonable than the modern; for the king's gantee of a chafe or free warren, might kill game in every part of his franchife; but now, though a freeholder of lefs than L. 100 a year is for bidden to kill partridge upon bis oun eflate, yet nobody elfe (not even the lord of the manor, unlefs he hath a grant of free warren) ean do it without committing a trefpafs and fubjuling himelf to an adion.

Under the article Game, the deftroying fueh beafts and fowls as are ranked under that denomination, was obferved (upon the old principles of the forelt-law) to be a trefpals and offence in all perfons alike, who have not authority from the crown to kill game (which is royal property) by the grant of either a free warren, or at leaft a manor of their own. But the laws called the gamelaws have alfo inflicted additional punifhments (chicfly pecuniary) on perfons guilty of this general offence, unlefs they be people of fueh rank or fortune as is therein particularly fpecified. All perfons, therefore, of what property or diflinction foever, that kill gane out of their own territories, or even upon their own eftates, without the king's liennce expreffed by the grant of a franchife, are guilty of the firlt original offence of eneroaching on the royal prerogative. And thofe indigent perfons who do fo, without having fuch rank or fortune as is gencrally called a qualification, are guilty, not only of the original offence, but of the aggravations alfo created by the flatutes for preferving the game: which aggravations are fo feverely punifhed, and thofe punifhments fo implacably inflicted, that the offence againft the king is foldom thought of, provided the miferable delinquent can make his peace with the lord of the manor. 'The only rational footing upon which this offence, thus aggravated, can be conlidered as a crime, is, that in low and indigent perfons it promotes idlenefs, and takes them away from their proper employments and callings: which is an offence againtt the public police and economy of the commonwealth.

The ftatutes for prelerving the game are many and various, and nor a little obfcure and intricate ; it being remarked, that in one flatute only, 5 Ann. c. I4. there is falfe grammat in no fewer than fix places, befides other millalses : the occafon of which, or what denomination of perfons were probably the penners of shefe flatutes, it is unneceflary here to inquire. It may be in general fuffieient to obferve, that the qualififations for killing game, as they are ufually called, or more properly the exemptions from the penaltics inflected by the fatute law, are, 1. The having a freehold eftate of L. 100 per annum; there being fifty times the property required to enable a man to kill a fatridge, as to vote for a knight of the fhire, z. A
leafehold for 99 years of L. 150 per annum. 3. Being the fon and heir apparent of an efquire (a very loofe and vague defeription) or perfon of fuperior degree. 4. lleing the owner or ketper of a foreft, park, chafe, or waren. For unqualified perfons tranfgrefling thefe laws, by killing game, keeping engines for that purpofe, or even having game in their cultody, or for perfons (however qualified) that kill game, or have it in poffifion, at unfeafonable times of the year, or unfeafonable hours of the day or night, on Sundays or on Chriftmas day, there are various penalties affigned, corporal and pecuniary, by different ftatutes (after-mentioned), on any of which, but only on one at a time, the juftices may convict in a fummary way, or (in moft of them) profecutions may be earried on at the affizes. And, lattly, by fatute 28 Geo. II.c. 12. no perfon, how ever qualified to kill, may make merehandife of this valuable privilere, by felling or expofing to fale any game, on pain of like forfeiture as if he had no qualification.

The ftatutes above referred to are as follow. No perfon flall take pheafants or partridges with engines in another man's ground, without licence, on pain of 101. ftat. 11 Hen. V1I. c. 13. If any perfon thall take or kill any pheafants or partridges with any net in the night-time, they fhall forfeit 208 . for every pheafant, and tos. for every partridge taken; and hunting with fpaniels in ftanding corn, incurs a forfeiture of 40 s. 23 Eliz. c. 10. Thofe who kill any pheafant, partridge, duck, heron, hare, or other game, are liable to a forfeiture of 206 . for every fowl and hare; and felling, or buying to fell again, any hare, pheafant, \&c. the forfeiture is los. for each hare, \&c. I Jac. I. c. 17. Alfo pheafants or partridges are not to be taken between the firft of July and the laft of Augult, on pain of imprifonment for a month, unlefs the offenders pay 20s. for every pheafant, \&c. killed: and conftables, having a jultice of peace's warrant, may fearch for game and nets, in the poffelfion of perfons not qualiGed by law to kill game or to keep fuch nets, 7 Jac. I. e. 1t. Contlables, by a warrant of a jultice of peace, are to fearch houfes of fufpected perfons for game : and if any game be found upon them, and they do not give a good account how rbey came by the fame, they fhall forfeit for every hare, pheafant, or partridge, not under 58 . nor excceding 20s. And inferior tradefmen hunting, \&c. are fubject to the penalties of the act, and may likewife be fued for trefpals. If officers of the army or foldiers kill ganse without leave, they forfeit 51 . an officer, and 10s. a foldier; 4 \& 5 W. and M. e. 23. Higglers, chapmen, carriers, inu-keepers, victuallers, \&c. having in rheir cuftody hare, pheafant, partridge, hearh game, \&c. (except lent by fome perfon qualified to kill game), fhall forfeit for every hare and fowl 51 . to be levied by dillrefs and fale of their goods, being proved by one witnefs, before a juftice; and for want of dittrefs thall be committed to the houfe of correction for tbree months: one moiety of the forfeiture to the informer, and tbe other to the poor. And felling game, or offering the fame to fale, incurs the like penaity; wherein hare and other game found in a fhop, \&ce. is adjudged an expofing to fale : killing hares in the night is liable to the fame penalties : and if any pertons fhall. drive wild-fowls with nets, between the firtt day of Jdy.
and
and the firf of September, they fhall forfeit 5 s. for every fowl; 5 Ann. c. 14.9 Ann. c. 25. If any unqualified perfon fhall keep a gun, he thall forfeit 101.; and perfons being qualified may take guns from thofe that are not, and break them; $21 \& 22$ Car. II. c. 25 . and 33 H. VIII. c. 6. One juftice of peace, up. on examiuation and proof of the offence, may commit the offender till he hath paid the forffiture of 101. Antl perfons, not qualified by law, keeping dogs, nets, or other engines to kill game, being convited thereof before a juftice of peace, fhall forfeit 51 . or be fent to the houle of correction for three months; and the dogs, game, \&cc. Thall be taken from them, by the flatute 5 Ann. If a perfon hunt upon the ground of another, fuch other perfon cannot jultify killing of his dogs, as appears by 2 Roll. Abr. 567 . But it was otherwife adjudged Mich. 33 Car. II. in C. B. 2 Cro. 4t. and fee 3 . Lev. xxviii. In actions of debt, quitam, \&c. by a common informer on the ftatute 5 Ann. for igl. whercin the plaintiff declared on two feveral counts, one for rol. for killing two partridges, the other for 5 l. for keeping an engine to deftroy the game, not being qualified, \&c. the plaintiff had a verdict for 51 . only: this action was brought by virtue of the flat. 8 Geo. I. See flat. 9 Geo. I. c. 22. See likewife ${ }^{2}+$ Geo. II. c. $3+$ for the better prefervation of the game in Scotland. By the flat. 26 Geo. II. c. 2. all fuits and actions brought by virtue of flat. 8 Geo. I. c. - for the recovery of any pecuniary penalty, or fum of money, for offences committed againft any law for the better prefervation of the game, hall be brought before the end of the ficond term after the offence committed.

By 28 Geo . It. c. 12. perfons felling, or expofing to Cale, any game, are liable to the penalties inflicted by 5 Ann. c. 14. on higglers, \&c. offering game to fale: and game found in the houfe or poffeflion of a poulterer, fallefman, fifhmonger, cook, or paftry-cook, is deemed expofing thereof to fale.

By 2 Geo . III. c. 19. after the aft Junc $\mathrm{I}_{1} \mathrm{C}_{2}$, no perfon may take, kill, buy or fell, or have in his cullody, any partridge, between ith February and if September, or pheafant between if February and ift October, or heath-fowl between af January and 2oth Auguft, or groufe between it December and 25 th July, in any year; pheafants taken in their proper feafon, and kept in mews, or breeding places, excepted: and pefons offending in any of the cafes aforefaid, forfeit 51 . per bird, to the profector, to be recovered, with full cofts, in any of the courts at Werminfter. By this act, likewife, the whole of the pecuniary penaltics under the 8 Geo . I. c. 19. may be fued for, and recovered to the fole ufe of the profecutor, with double cofts; and no part thereof to go to the poor of the parifh.

By 5 George III. c. It. perfons convicted of entering warrens in the night-time, and taking or kill. ing coneys there, or aiding or affiling thercin, may be punified by tranfportation, or by whipping, fue, or imprifonment. Perfons convitted on this act, not liable to be convicted under any former act. This att does not extend to the deftroying coneys in the day-time, on the fea and river-banks in the county of Lincoln, \&c. No fatisfaction to be made for damages occafioned by entry, unlefs they exceed is. It zay not be improper to mention an act lately made,
and not yet repealed, vis. 10 Geo III. c. 19. for pre. fervation of the game, which thows the importance of the objcci. It is thereby enacted, That if any perfon kill any hare, \&c. between fun fetting and funrifing, or ufe any gun, \&c. for deftroying game, fhall for the firtt offence be imprifoned for any time not exceeding fix nor lefs than three months: if griily of a fecond offence, after conviction of a firit, to be imprifoned for any time not exceeding 12 months nor lefs than fix; and thall alfo, within three days after the time of his commitment, either for the firlt or for any other offence, be once publicly whipped.
By 25 George III. c. 50 . and 31 George III. c. 2 r . every perfon in Great Britain (the royal family es. cepted), who fhall, after July I 1785 , ufe any dog, gun, net, or other engine, for the taking or deltruc. tion of game (not as acting as gamekeeper), fhall dc. liver in a paper or account in writing, containing his name and place of abode, to the clerk of the pcace or his deputy, and annually take out a certificate chcreof; and every fuch certificate fhall be charged with a ftamp-duty of L. $2,2 \mathrm{~s}$. (and an additional L. 1, I 8. by 31 Gen. III. c. 21.) making in the whole L. 3, 3 s. Every deputation of a gamekeeper flall be regitered with the clerk of the peace, and fuch gamekeeper Shall annually take out a certificate thereof; which certificate fhall be charged with a itamp duty of sos. 6 d . (and an additional ios. 6d. by 3 : Geo. III. c. 21), making in the whole L. I, Is. - The duties to be under the management of the commiffioners of the flampoffice.

From and after the faid 1 it of July $: 785$, the clerk of the peace fhall annually deliver to perfons requiring the fame, duly famped, a certificate or licence ac. cording to the form therein mentioned, for which he thall be intitled to demand is. for his trouble; and on rcfufal or neglect to deliver the fame, forfeit L. 20. - Every certificate to bear date the day when iffued, and to continue in force until the if day of July ther. following, on penalty of 201 .

After the if tlay of July 1785 , any perfon that fhall ufe any greyhound, hound, pointer, fetting-dog, fpaniel, or other dog, or any gun, net, or engine, for taking or killing of game, without a certificate, is liable to the penalty of 201 . And if any gamekeeper Thall, for the fpace of 20 days after the faid Ift day of July, or if any gamekeeper thereafter to be appointed frall, for the fpace of 20 days next after fuch appointment, neglect or refufe to regifter his deputation and take out a certificate thercof, he is liable to the penalty of 201 .

The clerks of the peace are to tranfmit to the Atamp-office in Lundon alphabetical lifts of the certificates granted in every year before the ift day of Augult, under penalty of 201 . Thefe lifts are to be kept at the Alamp-office in London, and there to be infpected on payment of s. : And the commifioners of the Itamp duties are, once or oftener in every ycar, as foon as fuch litts are tranfmitted to them, to caute the fane to be publifhed in the newfapers circulating in each county, or fuch public paper as they Ghall think moft proper.
If any gamekeeper, who fhall have regiftered his. deputation, and taken out a certificate thereof, fhall: be changed, and a new gamekeeper appointed in bis. flead, the firt certificate is declared null and void,

## I. A W

 and the perfon acting mader the fame after notice, is liable to the penalty of zol. And any perfon in purfuit of game, who fhall refufe to produce his certificate, or to tell his name and place of abode, or thall give in any falfe or fietitious name or place of abode to any perfon requiring the fame, who fhall have oftained a certificate, is liable to the penalty of 501 .The certificates are not to authonife perfons to kill game at any time prohibited by law, nor to give any perfon any right to kiill game, unlefs fuch perfon hail be qualified fo to do by the laws now in heing, but hall be liable to the fame penalties as if this act hal not pafted. [So that though by this act qualified and suqualified perfons are tqually included, yet having a certificate does not give a: unqualified perfon a right to kill game : the point of right ftill ftands upon the former acts of parliament; and any unqualifed perion killing game without a certiticate, is not only liable to the penaity infifted by this act, but allo to all the

Mifiliary Iait. See Military and Marine. fromer panalties relating to the killing of game, \&:e.]

Witneffes refufing to appear on juftices fummons, or appearing and refufing to give cridence, furfeit 101. The certifieates obtained under deputations, not to be given in evidence for killing of game by a gamekeeper out of the manor, in refpect of which fuch depstation or appoirtment was given and made. P'erfons counterfeiting flamps to fuffer death as felons.

Penalties exceeding 201 . are to be recovered in any of his majelty's courts of record at Weflminfler; and penaltics not excceding 201 . are recoverable before two juftices, and may be levied by diftrefs. The whole of the peralites go to the inforner.

LAW (John), the famous projector, was the ctdeft fon of a goldimith burgefs in Edinburgh, by EIizabeth Campbell heirefs of Laurieflon near that city ; and was born about the year 1681 . He was bred to no bufinefs; but poffefied great abilities, and a very fertile invention. He bad the addrefs, when hut a very young man, to incommend himfelf to the king's minillers in Scotland to arrange and fit the revenue accounts, which were in great diforder at the time of fettling the equivalent before the union of the king. doms. The atsention of the Scottifl parlianent being alfo turned to the contrivance of fome ineans for fupplying the kingdom with money, and facilitating the circulation of fpecie, for want of which the indiftiy of Scotland languimed; he propofed to them, -for thefe purpofes, the eftahlifhment of a bank of a particular kind, which he feems to have imagined might iffue paper to the amount of the whole value of ail the lands in the country: but this feheme the pariiament by no means thought it cxpedicnt to adopt.

His father dying about the year 1704, Law fucceeded to the fmall eftate of Lauriefton; but the rents being infufficient for his expences, he liad recourfe to gaming. He was tall and gracefut is his perfou, and much addicted to gallantry and finery ; and giving a fort of ton at Edinburgh, he went commonly by the name of Beau Law. He was forctd to fly his cuuntry, however, in the midft of his career, in confequence of having fought a duel and killed his antagonill : and in fome of the French literary gazettes it is faid that he run off with a marricd lady. In bis
flight from juftice he vifited Italy; and was banifhed from Venice and Genua, becaufe he contrived to drain the yonth of thefe cities of their money, by his fuperiority in calculation, that is, by being a cleeat and a flarper. He wandered over all tealy, living on the event of the molt firnular bets and wagers, which feemed to be advantagenus to thofe who were curious after novely; but which were always of the molt certain fuccefs with regard to him. He arrived at Turin, and propofed his fyftem to the duke of Savoy, who faw at:once, that, by deceiving his fubjects, he would in a fhort time have the whole money of the kingdom in his polfeffion : but that fagacious prince akking him how his fuljeets werc to pay therr taxes when all their money thould be gonc, Law was difconserted, not expecting fuch a quedion.

Having been banihed from Italy, and thus repulfed at Turin, Law proceeded to Paris, wherc he was alrea'y known as a projector. In the lifetime of Louis XIV. he had tranfmitted his fchemes to Defmareft and to Chamilldad, who had rejeited them as dan. gerous innovations. He now propofed them to the Dice d'Orleans, who defired Noailles to examine them, to be as favourable in his report as poffible, and to remark fuch of them as were practicable. Noailles called in the aflillance of feveral merchants and bankers who were averfe to the fyltem. Law then propofed the eftablifhmeut of a bank, compofed of a company, with a flock of fix millions. Such an inttitution pronifed to be very advantageous to commerce. An arret of the ad March 1716 ettablifhed this bank, by zuthority, in favour of Law and his affociates; two hundred thoufand flares were inflituted of one thoufand livres each ; and Law depofited in itro the value of two or three thoufand crowns which he had accumulated in Italy, by gaming or otherwife. 'F'his cflablifhment very much difpleafed the bankers, becaufe at the beginning bufinefs was tranfacted here at a very fmall premium, which the old financicrs had charged very highly. Many people had at firlt little contidence in this bank; but when it was found that the payments were made with quicknefs and punctuality, they began to prefer its notes to ready money. In confequence of this, fhares rofe to more than 20 times their original value; end in 7710 their valuation was more than 80 times the amount of all the current fecie in the kingdom. But the following year, this great fabric of falle credit fell to the ground, and almoit overthrew the Frencb govermment, rrining fume thoufands of families; and it is remarkahle, that the fame defparate game was playcd by the South Sia directors in Eugland, in the fanse fatal ycar, 1720. Law being exiled as foon as the credit of his prejects began to fail, retired to Venice, where he died in 1729 .

The principles upun which Law's original fcheme was founded, are explained by himfelf in $A$ Difourfe concerning Money and Trade, which he publifhed in Scotland where (as we have feen) he fieft propofed it. "The fplendid but vilionary ideas which are fet furth in that and fome other works upon the fame principles ( $\mathrm{Dr}_{\mathrm{r}}$ Adam Smith obferves), itill contince to make an impreffion upon many peuple, and have perthaps in part contributed to that excefs of banking which has of late been complained of buth in Scotland and in other places."

Law. LAW (Edmund), D. D. bifhop of Carlifle, was born in the parifh of Cartund in Lancafhire, in the year 1703 . His father, who was a clergyman, held a fimall chapel in that neigbourhood; but the family had been fituated at Afkhain, in the county of Weftmoreland. He was educatel for fome time at Cartmel fehtol, afterwards at the free grammar-fchool at Kendal; from which he went, vely well initrocted in the learning of grammar fchools, to St Jobn's college in Camhridge.

Soon after taking his firt degree, he was elected fellow of Chrift-college in that univerfity. During his retidence in which college, he became known to the public by a Tranflation of Arclubiflop Fing's Effay upon the Origin of Evit, with cop:ous notes; in which many metaplyfical fubjects, curions and interelting in their own nature, are treated of with great ingenuity, learning? and novelty. To this work was prefixed, under the name of a Pieliminary Differtation, a very valuable piece, written by the reverend Mr Gay of Sidney college. Our bifhop always fpoke of this genteman in terms of the greateft refpect. In the Bible and in the writings of Mr Locke, no man, he ufed to fay, was fo well verfed.
He alfo, whillt at Chrift-college, undertook and went througla a very laborious part in preparing for the prefs an edition of Stephens's Thefaurus. His acquaintance, during this his firlt refidence in the univerfity, was principally with Ir Waterland, the Itarned mafterof Magdalen college : Dr Jortin, a nante knownto every fcholar ; and Dr Taylor, the editor of Demotthenes.

In the year $1 ; 3$; he was prefented by the univerfity to the living of Grayllock in the county of Cumberland, a rectory of about 300 l . a-year. The advowfon of this henefice belonged to the family of Howards of Gray fock, but devolved to the univerlity, for this turn, by virtue of an act of parliament, which transfers to thefe two bodies the nomination to fuch benefices as appertein, at the time of the vacancy, to the patronage of a Roman catholic. 'The right, however, of the univerfity was contefled: and it was not till after a law-fuit of two years continuance that Mr Law was fettled in his living. Soon after this, he nrarried Mary the dangliter of John Chritian, Efq; of Unerige, in the county of Cumherland; a lady whofe character is remembered with tendernefs and efteen by all who krew her.

In 1743, he was promoted by Sir George Fleming, bithop of Carlifie, to the archdeuconry of that diocefe; and in ${ }^{1746}$ went from Graytock to relide at Salkeld, a pleafant village upon the banks of the river Eden, the rectory of which is annexed to the archdeaconry. Mr Law was not one of thafe who lofe and forger themfelves in the country. During his refidence at Salkeld, he publithed Contiderations on the Theory of Religion: to which were fubjoined, Reflection on the Life and Characien of Chrill; and an Appendix concerning the ufe of the words soul and Spirit in holy fcripture, and the flate of the dead there defrcibed.

Dr Keene held at this time, with the bifhopric of Cliefter, the mater:hip of Peterhoufe in Cambridge. Defiring to leave the univertity, he procured Dr Law to be dected to fuccecd hiin in that flation. This tock place in the year 1756; in which year Dr Law
tefigned his archdeaconry in favour of Mr Eyre, a bro-ther-in-law of Dr Kecne. Two years before this, he had proceeded to his degree of Doctor in Divinity ; in his public exercife for which, he defended the doctrine of what is ufually called the " ीeep of the foul."

Abnut the year $1-60$, he was appointed head librarian of the univerfity; a fituation whicl, as it procured an eafy and quick accefs to books, was peculiarly agreeable to his tafte and hahits. Sorne time after this, he was alfo appointed cafuiftical profeffor. In the year 1762, he fulfered an irreparable lofs by the death of his lady ; a lofs in itfelf every way aflicting, and rendered more fo by the fituation of his family, which then confited of eteven children, many of them. very young. Some years afterwards, he received feveral preferments, which were rather honourable ex. pretions of regard from his friends than of much ad. vantage to his torturic.

By Dr Cornwallis, then bihop of Litchfield, aftero wards arclibihop of Canterbury, who had been his pupil at Chrill-college, he was appointed to the archdeaconry of Stalfordthire, and to a prelend in the clurch of Litchlield. By his old acquaintance Dr Green, bifhop of Lincoln, he was made a prebendary of that church. But in the year 1767 , by the intervention of the duke of Newcallle, to whofe interelt, in the memorable contelt for the high- ftewardhip of the univerfity, he had adhesed in oppofition to fome temptations, he obtained a ftall in the church of Durham. The year fier this, the duke of Giafton, who had a fhort time before betil elected chancellor of the univerlity, recommended the mafier of Peterhoufe to his najefty for the bifhopric or Carlifle. This recommendation was made not on!y without fulicitation on his part or that of his friends, but without his knowledge, until the cule's intention in his favour was lignified to him by the archbiflop.
In or about the year 1777, our bifiop gave to the public a handfome edition, in three volumes quarto, of the Works of Mr Locke, with a Life of the Iuthor, and a Preface. Mr Locke's veritings and characio he held in the highelt elleem, and feems to have dran 1 from them many of his own principles: He was a dif, ciple of that fcliool. About the fame time he publifh. ed a tract, which engaged fome attention in the colltroverfy concening fubfeription; and he publithed new editions of his two principal works, with conlio derable additions, and fome alterations.

Dr Law held the fee of Carlifle almoit 19 years; ditring which time he twice orly omitted fpendnge the fummer months in his diccefe at the bifhop's refidence at Rofe Caltle; a linuation with which he was muchpleafed, not only on account of the natural beauty of the place, but becaufe it reflored him to the country, in which hie had ipent the belt part of his life. In the year $17 \%$ he paid this vifit in a flate of great weaknefs and exhaufion; and died at Rofe about a month after his arrival there, on the $14^{\text {th }}$ day of Auguft, and in the 8tth year of his age.
The life of the bimop of Carlifle was a life of inceffant reading and thought, almolt entirely directed to metaphy fical and religions inquiries. Beldes the works already mentioned, he publifhed, in 1734 or 1735, a very ingeniuus Inquiry into the Idecas of Space, Timi, \&c. in which he combats the opinions of D\& Clarke

## I A W

I, $1 x$.
find his adherents on thefe fubjects: but the teuet by which his nante and writings are principally diftinguifhed, is "that Jefus Chrift, at his fecond coming, will, by an act of his power, reftore to life and confcioufnefs the dead of the human [pecies, who, by their own nature, and without this interpofition, would remain in the flate of infenfibility to which the death brought upon mankind by the fin of Adam had redured them." He interpreted literally that faying of St Paul, I Cor. xv. 21. "As by man came death, " by man came alfo the refirrection of the dead." This opinion had no other effect upon his own mind than to increafe his reverence for Chriftianity, and for its divine Founder. He retained it, as he did his other fpeculative opinions, without laying, as many are wont to do, an extravagant Arefs upon their importance, and without pretending to more certainty than the fubjeet allowed of. No man formed his own conclufions with more freedom, or treated thofe of others with greater candour and equity. He never quarrelled with any perfon for differing from him, or confidered that difference as a fufficient reafon for queltioning any man's fincerity, or judging meanly of his underttanding. He was zealoufly attached to religions liberty, becaule he theught that it leads to truth ; yet from his heart he loved peace. But he did not perceise any repuguancy in thefe two things. There was nothing in his elevation to his bilhopric which he fpoke of with more pleafure, than its being a proof that decens frcedom of inquiry was not difcouraged.
He was a man of great foftnefs of manners, and of the mildeft and mot tranquil difpofition. His voice was never raifed above its ordinary pitch. His countenance feemed never to have been ruffled; it preferved the fame kind and compofed afpect, truly indicating the calmnefs and benignity of his teniper. He had an utter dilike of large and mixed companies. Next to his broks, his chief fatisfaction was in the ferious converfation of a literary companion, or in the company of a few friends. In this fort of fociety he would open his mind with great unrefervednefs, and with a peculiar turn and fprightlinefs of exprefisa. His perfon was low, but well formed : his complexion fair and delicate. Except occafional interruptions by the gout, he had fort he greateft part of his life enjoyed good health; and when not confined by that dittemper, was full of motion and activity. A bout nine yeare before his death, he was greatly enfeebled by a fevere attack of the gout in his flomach; and a flort time after that, lof the ufe of one of his legs. Notwithtanding his fondnefs for exercife, he refigned himfelf to this change, not only without complaint, but without any fenfible diminution of his cheerfulnefs and good humour. His fault (for we are not writitg a panegyric) was the general fault of retired and ftudiuus characters, too great a degree of inaction and facility in his public fation. 'The modelly, or rather bafhfulnefs of his nature, together with an extreme unwillingnefs to give pain, rendered him fometimes lefs firm and efficient in the adminiftracion of authority than was requifite. But it is the condition of human morality. There is an oppoficion between fome virtues which feldom permits them to fuhbit together in perfection.

The biflop was interred with due folemnity in his sathedral church, in which a handfome monument is $\mathbb{N}^{\circ}{ }^{179}$.
ereeted to his memory, bearing the following iufcrip. tion:

> Columnz hujus fepultus eft ad pedem Edmundus Law, S. T. P.
per xix fere annos hujuice ecclefix Epifcopus.
In evangelica veritate exquirenda, et vindieanda, ad extremum ufque fenectutem, operam navavit indeffflam. Quo autem fludio et affectu veritatem, codern et libertatem Chrilianam coluit; Religionem limplicem et incorruptan, nifi falva libertate, ftare non poffe arbitratus. Obiit Aug. xiv. MDCCLXXXVII. AEtat. Lxxxiv.
LAWBURROWS, in Scots law. See Law, Part III. N ${ }^{\circ}$ clxxxiii. 16.
LAWENBURG, Duchy, a territory of Germany, in the circle of Lower Saxony, bounded by the duchy of Holltein on the north and welt, by the duchy of Mecklenburg on the eall, and by the duchy of Lunenburgh, from which it is feparated by the river Elbe, on the weft; being about 85 miles long, and 20 broad. The chief towns are Lawenburg, Mollen, Wittemburg, and Ratzeburg. It belongs to the elector of Honover.

Lafeneurg, a city of Germany in the circle of Lower Saxony, and capital of a duchy of the fame name. It is a fimall but populous town, fituased on the Elbe, under the brow of a very high bill, from whence there is a delightful profpect over the adjacent country. It has a caftle on an eminence, and is convenient for trade. E. Long. 10. 51. N. Lat. 53. 36 .

Lawenburg, a town of Germany in Farcher Pomerania, and the chief place of a territory of the fame name, belonging to the clector of Brandenburg.

LAWLERS, an eminent engraver, who flourified about the middle of the 16 th century. He was a native of Flanders, and probably fudied under Paul Pontins, whole Ayle of engraving he frequently imitated. He poffeffed a conficierable thare of merit; but was by no means equal to that great mafter, either in the excellency of the handling of the graver, or knowledge of drawing. He engraved from leveral painters ; but his beft works are from the pictures of Rubens.

LAWES (Henry), a celebrated muficizn, and the Purcell of his time. He was a fervant io Charles I. in his public and private mufic, and fet fome of the works of almoft every poet of eminence in that reign. The Comus of Milton, and feveral of the lyrics of Wal. ler, were fet by him; and borh thefe poets have douse him honour in their verfes. He compofed a confiderable number of pfalm-tunes in the Cantica Sacra, for three voices and an organ; and many more of his compofitions are to be feen in a work called Seled airs and dialogues; alfo in the Treafury of mific, and the MuLical companion. He died in 1662.

Lawes (William), was brother to the former, and a moft capital mufician. He made above 30 feveral forts of mufic for voiece and inftruments; nor was there any inflrument then in wfe, but he compofed to it as aptly as if he had fludied that alone. In the mufic fcbool at Oxford are two large manuicript volumes of his works in fcore for various inftruments. He was and, to the great regret of the king, was killed at the fiege of Chefter- in 1645.

LAWLESS court, a court faid to be held anpually on King's Hill at Rochford in Effex, on the Wednefday morning after Michaelmas day at cockcrowing, where they whifper, and lave no candle, nor any-pen and ink, but only a coal. Peifons who owe fuit, or fervice, and do not appear, forfeit double their rent every hour they are miffing.

This fervile attendance, Cambden informs us, was impofed on the tenants for confiring at the like unfeafonable hour to raife a commotion. The court belongs to the honour of Raleigh, and to the earl of Warwick; and is called lawlefs, from its being held at an mulawful hour.
L.AWINGEN, a town of Germany, in the circle of Suabia; formerly imperial, but now fubject to the duke of Neuburg. Here the duke of Bavaria, in 1707, fortified his camp to defend his country againt the Britifh forces and their allies commanded by the duke of Marlborough, who forced their intrench. ments. It is feated on the Danube, in E. Long. 10. 29. N. Lat. 3 8. 32.

LAWN, a fpacious plain in a pask, or adjoining "to a noble feat. As to the dimenfions of a lawn: In a large park, it Thould be as exteufive as the ground will permit; and, if poffible, it fhould never be lefs than 50 acres: but in gardens of a moderate extent, a lawn of 10 acres is fufficient; and in thofe of the largeft fize, 15 acres. The beff fituation for a lawn is in the front of the houfe: and here, if the houfe foont the ealt, it will be extremely convenient ; but -the mott defirable afpect for a lawn is that of the fouth-eaft. As to the figure of the lawn, fome recommend an exact fquare, others an oblong fquare, fome an oval, and others a ciccular figure: but neither of thefe are to be regarded. It ought to be fo contrived, as to fuit the ground; and there fhould be trees planted for flade on the boundaries of the lawn, fo the fides may be broken by irregular plantations of trees, which, if there are not fome good profpects beyond the lawn, fhould bound it on every fide, and be brought round pretty near to each end of the houfe. If in thefe plantations round the lawn, the trees are placed irregularly, fome breaking much forwarder on the lawn than others, and not crowded too clofe together, they will make a better appearance than any regular plantations can poffibly do; and if there are variety of trees, properly difpofed, they will have a good effect ; but only thofe which make a fine appearance, and grow large, ftraight, and handfome, flould be admitted here. The moft proper trees for this purpofe, are the elm, oak, chefnut, and beech; and if there are fome clumps of ever. green trees intermixed with the others, they will add to the beanty of the whole, efpecially in the winter-feafon; the beft forts for this purpofe are lord Weymouth's pine, and the filver and fpruce firs.
Lawn, in tnamufactures, a fine fort of linen, remark. able for being ufed in the fleeves of bifhops.
LAWRENCE (St), the largett river in north A. merica, proceeding from the iake Ontario, from which it runs a courfe of 700 miles to the Atlantic ocean. It

Vol. IX. Part. II.
is navigable as far as Quebec, which is -above 400 Lawfonia. miles; but beyond Montreal it is fo full of Thoals and rocks, that it will not admit large veffels without danl.3 ger, unlefs the channel be very well known.

La WSONIA, Egyptian privet: A genus of the monogynia order, belonging to the octandria ciafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The caly $x$ is quadrifid; the petals four ; the ftamina four in pairs ; the capfule is quadrilocular and polyipermous. There are two fpecies, the inermis and fpinofa, both natives of India. Some authors take the firit to be the plant termed by the Arabians benna or albenna; the pulverifed leaves of which are much ufed by the eaftern na. tions for dying their nails yellow : but others, Dr Haffelquift in particular, attribute that effect to the leaves of the other fpecies of Egyptian privet which bears prickly branches. It is probable, that neither fet of whiters are miftaken, and that the fhrub in queftion is a variety only of the thorny lawfonia, rendered mild by culture.

Alhenna grows naturally and is cultivated throughout India, as alfo in Egypt, Paleftine, and Perfia. In thofe countries, fays Haffelquilt, it flowers from May to Auguft. The leaves being pulverifed, are made with water into a patte, which the inhabitants of thofe countries bind on the nails of their hands and feet, keeping it on all night. The deep yellow colour that is thus obtained is confiderably permanent, not tequiring to be renewed for feveral wesks. It would feem that this cultom is very ancient in Egypt; the nails of fome mummies being found dyed in this manner. The dried flowers of henna afford a fragrant fmell, which, it its affirmed, women with child cannot bear.

LAWYER, fignifies a counfellor, or one that is learned or fkilled in the law. See Counsellor, Bap. rister, and Serjeant.
L.AY, a kind of ancient poem among the French, confifting of very fhort verfes.
There were two forts of lays; the great, and the little. The firft was a poem confifting of twelve cou. plets of verfes, of different meafures. The other was a poem confiting of fixteen or twenty verfes, divided into four couplets.

Thefe lays were the lyric poetry of the old French poets, who were imitated by fome among the Englifh. They were principally ufed on melancholy fubjects, and are faid to have been formed on the model of the trochaic verfes of the Greek and Latin tragedies.

Father Mourgues gives us an extraordinary inftance of one of thefe ancient lays, in his Treatife of Frencti Poetry:

> Sur l'appuis du monde
> Que fat il qu'on fonde
> D'efpoir?
> Cette mer profonde,
> En debris feconde
> Fait voir
> Calme au matin, l'ondt
> Et lorage y gronde
> Le foir.

Lar-Brothers, among the Romanits, tlivfe pious but illiterate perfons, who devote themfelics in fome convent to the fervice of the religious. They wear a 5 A
different

## L A Z <br> I A Z

Layers different habit from that of the religious; but never enter into the choir, nor are prefent at the chapters; nor do they make any other vow except of conflancy and obedience. In the nunneries there are allo laydifters.

Lar-Man, one who follows a fecular employment, and has not entered into holy orders.

LAYERS, in gardening, are tender fhonts or twigs of trees, laid or buried in the ground, till, having ftruck root, they are feparated from the parent-tree, and become diftinct plants.-The propagating trees by layers is done in the following manner: The branches of the trees are to be flit a little way, and laid under the mould for about half a foot; the ground fiould be firft made very light, and after they are laid they fhould be gently watered. If they will not remain eafily in the pofition they are put in, they mult be pegged down with wooden hooks: the beft feafon for doing this is, for ever-greens, toward the end of Ausgult, and, for other trees, in the begimning of Febru. ary. If they are found to have taken root, they are to be cut off from the main plant the fuceceding win. ter, and planted out. If the branch is too high from the ground, a tub of earth is to be raifed to a proper height for it. Some pare off the rhind, and others twif the brancl before they lay it, but this is not neceffary. The end of the laser fhould be about a foot out of the ground; and the branch may be either ticd tight sound with a wire, or cut upwards from a joint, or cut ronnd for an inch or two at the place, and it is a good method to pierce fevcral holes through it with an awl above the part tied with the wire.

LAYING The land, in navigation, the fate of motion which increafes the diftance from the coalt, fo as to make it appear lower and fmaller, a circumflance which evidently arifes from the intervening convexity of the furface of the fea. It is ufed in contradiction to rajing the land, which is produced ty the oppofite motion of approael towards it. See Land.

LAZAR-house, or Lazaretto, a public building, in the nature of an hofpital, to receive the poor, and thofe allicted with contagious diftempers. In fome places, lazarettos are appointed for the performsnce of quarantine ; in which cafe, thofe are obliged to be confined in them who are fufpected to lave come from places infected with the plague.

LAYSTOFF, or Lowestoff, a town of Suffolk 117 miles from London, feems to hang over the fea, and its chief bulincfs is fifhing for cod in the north fea, and for herring, maekarel, and fprats, at home. The church being three furlongs off, there is a chapel in the place. Having been a part of the ancient demefnes of the crown, this town has a charter and a feal, by the former of which the inhabitants are exempted from ferving on juries. Here is a market on Wednerday, and two fairs in the year. Some take this to be the moft eaftern part of Britain.

LAZULI, or Lapis Lazvli, a fpecies of zcolite belonging to the clafs of argillaceous earths. See Clay, $\mathrm{n}^{\circ} 7$. It is of a blue colour. That which is of a fine blue irclining to purple, has obtained the name of Oricntal; but the pale blue is lefs efteemed. It is frequently variegated with yellow, and white fhining veins and fpeckles; which the common people
take for gold and filver, though they are in truth nothing but marcafites. The lapis lazuli has the following properties: 1. It retains its blue colour for a long time in a calcining heat; but changes at lait to a brown. 2. It melts cafily in the fire to a white frothy flag; which puffs up greatly when expofed to the flame of a blow-pipe; but with a flrong heat in a covered veffel, it becomes clear and folid, with blue clouds in it. 3. It does not ferment with acids;"but, if boiled with oil of virriol, it flowly diffolves, and loies its bluc colour. On adding a folution of fixed alkali, it precipitates a white earth, which being feorified with borax, yields a filver coloured regulu3, varying in bignefs according to the different fecimens of the fone. 4. By feorification with lead, it yields filser, fometimes in the quantity of two ounces to a hundred weight of the flone. 5. Oil of vitriol difcovers the prefence of filver more certainly in lapis lazuli than fpirit of nitre. 6. On adding fpirit of fal am noniae to any folurion either of crude or calcined lapis lazuli, no blue colour is produced; a certain proof that it does not depend on copper ; which is further confirmed by the fixity of the blue colour in the fire, and the colour of the flag or glafs. 7. It is fomewhat harder than the other kinds of zeolite, but dues not approach to the hardnefs of quartz or other filiceous fones in general; for the purelt and fineft lapis lazuli may be rubbed into a white powder by means of fleel, though it takes a polifh like marble. 8. When perfectly caleined, it is a little attracted by the loadfone; and when fcorified with lead, the flag beeomes of a greenifh colour, not like that produced by copper, but fuch as is always produced by iron mixed with a calcareous fubtance:

Mongez informs us, that fome of the parts of lapis lazuli will frike fire with Aecl. According to Cronfledt, it is feldom found pure; but generally full of veins of quartz, limeftone, and marcafite : but for the experiments by which the above mentioned qualities were determined, the puref pieces were pieked ; fuch as had been examined through a magnifying glafs, and judged as free from heterogeneous mixture as poffible. Our author exprefles a wihh that fuch as are in pofferfion of any quantity of the fone would make farther experiments, in order to determine what fubftance it is which produces the blue colour fo conflant in the fire, fince it cannot depend either on copper or iron; foz though thefe metals, on certain oceafions, give a blue colour, yet they never produce any other but what inflantly vanifhes in the fire, and is deftroyed by means of an alkali. "What is mentioned in feveral books (fays he) can by no means be objected here; fince in thefe proceffes the filver employed is mixed with copper and other fubftances which contain a volatile alka. li, whereby the bluc colour is produced."

In the year 1761 M. Margraaf publifhed fome ex. periments on the lapis lazuli; in which he agrees in a great meafure with Cronfledt. According to him, the lapis lazuli does not contain any copper ; but he found in it a calcareous and gypfeous fubllance, though he took care to pick out the very purell hits he could find. Engeftrom, however, is of opinizn, that the calcareous fubftance is not cflential to lapis lazuli; as Cronftedt fays, that the lapis lazuli he tried did not ferment with acids. He farther mentions, that when diffolved in any of the mineral acids, it always turned

L E A [ Wale, them into a jelly. Some of his experiments alfo feem to indicate, that all kinds of lapis lazuli do not con. tain filver, though many of them do.
The lapis lazuli is found in many parts of the world; but that of Afia and Africa is much fuperior both in beauty and real value to the Bohemian and German kind, which is too often fold in its place.

LEACHLADE, a town of Glouceflerflire, 12 miles eall from Cirencefter, 29 miles from Gloucefter, and 60 from London. The river Thames waters it on the fouth and eaft fides, and divides it from Wilthire and Berkfhire. The Leach runs through the north fide ef the parifh. The Thames river is navigable for barges of 50 tons burden, but want of water one part of the ycar makes the navigation very uncertain. Here is a frall market on Tuefday, and two fairs in the year. The church is a large handfome building, with double ailes, fupproted by two rows of fluted pillars.

LEAD, one of the imperfect metals, of a dull white colour inclining to blue, the leaft ductile, the leaft claftic, and the leaft fonorous, of the whole, poffeffes a confiderable degree of fpecific gravity, reaching from 11.3 to 11.479. It is found;

1. Native. Cronitedt and fome other mineralogitg have doubted whether native lead was ever found in the earth, but the matter is now decided by innumerable teftimonies. It appears from the Plilofophical Tranfactions for $\mathbf{1 7 7 2}$, that fome fmall pieces of native lead were found in the county of Monmonth in Wales. It is faid alfo to be found in the Vivarrais in France. Domare mentions a curious fpecimen of native lead kept in the collection of the abbé Nolin at Paris, that had been found in the lead mines of Pompenn, near Reunes in Buittany. It was very malleable, could be cut with a knife withont crumbling, and"eafily melted over the flame of a candle. It weighed about two pounds; was imbedded in an earthy lead ore of a reddifh colour; and had a flaty vein that went througls the middle of it.
2. Leal $\int p a r$, is fumetimes tranfparent, but general. ly opake, and cryftalized in reguiar forms of a laminar or ftriated texture. Lead ochre, or native ceruls, is the fame fubtance, but in a loofe form, or indurated and fhapelefs. Sometimes it is found in a filky form. Both contain forne iron, calcareous earth, and clay ; and both grow sed or ydllowith when heated. They effervefue with acids, and afford from (io to 80 or 90 per cent. of lead. They are found in Brittany, Lorrain, Germany, and England.
M. Sage, of the rnyal acadeny of Paris, pretended, that the white lead ore from Poulawen in the county of Bretagne in lrance, was mineralized by the marine acid; but his mitake was detected by the conmif. fioners of that academy. This ore, according to the fame academicians, is compofed of Atriated crytits, of a whitith pale red orgrey colour. There is a lead ore of this kind fometimes grey and functimes yeilow, which is very licavy. Its firueture is either lanellated or fibrous, and its laminx can hardly be feparated; but ir is Criable, and may be cut with a knife. Somctinies it is cyflallized; and fometimes its fibres arc extreme. ly thin, feminanfparent, and have a filky look. They effervefe with acids, decrepitate in the fire, and feem to lofe the aetial acid by which the lead is inineralifed.

The fparry lead ore has often a femitrauparency
minated by hexahedral prifins, or cylindrical columns, Atriated, and apparently compofed of a great number of filaments. Thefe fparry cryftals are always found in the fame places with the galenas or fulphurated lead ores; and feem to be formed from their decompofition after the lofs of their fulphur; fo that it is not uncommon to find galenas which are beginning to pafs into a flate of white lead. There is a black ore of lead, which may be fuppofed to be in an intermediate flate Letwixt the white lead ore and galena, as it feems to be a true white lead tinged by the hepatic vapours of the fulphur on its parting from the galena. There is alfo a green tranfparent lead, having a more or lefs yellowifh caf. It frequently has no regular form, and appears like a kind of mofs. When this green ore is cryflalized, it confints of hexahedral truncated prifms, terminated by fix-lided pyramids, either entire or truncated near the bafe. Profefor Brunnich tells us, that the green and the black lead ores from Saxony, and the Hungarian blue ores, are prifmatic. According to Kirwan and Monge\%, the grcen lead ores are cither cryftallized in needles as in Brittany, or in a loofe powder as in Saxony ; but moftly adhering to and invelting quartz. They owe their green colour to iron, fcldom coutaining any copper, and are very sare. Brunnich mentions a fapphire-coloured ore once found among fome white lead (par at Wendifh Lemea. It was eafily melted by the blow-pipe. Natural red lead or minium has becn found in fome Siberian mines. If is found either cryttallized, or in thapelefs malles, or in powder, in which it agrees with the brown or yellow ores. Dr J. R. Forter brought fome of this cryftalo lized red lead ore from Ruflia. The cryftals were cubical, and the colour fcemed rather pale. The red Siberian ores are perfectly rhombic; thofe from Bohemia have a cubical or rhomboidal form. Sulphur and arfenic liave been found in the red ones, but the others have not been fufficiently inveltigated. Moft of them effervefce with acids.
3. Arfenical lead $\int$ far. Crontedt fays that he tried an ore of this kind from an unknown place in Germany, and found that no metal could be melted from it by means of the blow-pipe as could be done by other fpars; but by doing it in a crucible, that part of the arfenic which did not fly off was likewile reduced, and found in the form of grains difparfed, and forced into the lead. A nother ore fimilar to this, and which likewife was not eafily reduced by means of the blow-pipe, always thot into polygonal, but chicfy hexagonal cryitals, after being melted, having thining furfaces. Profeffor Brunnich obferves, that thefe ores effervefce with acids, and contzin 40 per cent. of lead.
4. The bly-ghanz of the Germans contains lead mineralized with fulphur alone, and of this there are two or three varieties. At Villach in Auftria there is faid to befound a potters lead-ore containing :ot the fmallcat portion of tilver.
5. Leed mineralifed ly the viltiolic acid, is generally in the form of a white mafs, foluble in 18 times its quantity of water. Sometiases it is blackifh, and cryftallized in very long ftrix, or in friable falatites; this lat variety eflorefces in the air, and is converted

## L E A

Lead. into a true vitriol of lead. According to Mr Kirwan, it does not effervefce nor is foluble in other acids, but may be reduced by laying it on a burning coal. It originates from the decompofition of fulphurated lead ores. Dr Withering informa us, that it is found in great quantity in the ifland of Anglefey; but united to irom, and not reducible by the blow-pipe or charcoal.
6. Lead mineralized ly the phofphoric acid, was lately difcovered by Mr Gahn. It is of a greenih, yellow, or reddifh colour, and does effervefce with acids. After folution in nitrous acid, the lead may be precipitated from this ore by the vitriolic acid. An hundred grains of lead are produced from 137 of this precipita!e wahhed and dried. The decanted liquor evaporated to dry nefe affords the phofphoric acid, from which the infammable compound may be produced by diftillation with charcoal. Seven ounces of this lead ore from the neighbourhood of Friburg, treated in the manner juft mentioned, yielded by diftillation 344 grains of phofphorus. A compound fimilar to this ore may be obtained by mixing pure phofphoric acid (that is, fueh as is combined with the volatile alkali, for the foffile alkali in the misfocofmic falt hinders the operation) with red lead.
7. Galena, or polters ore, in which the metal is mineralized by fulphurated filver. According to Mr Kirwan it is the inot common of all the lead ores, of a bluith dark lead colour, formed of cubes of a moderate fize, or in grains of a cubic figure, whofe corners have been cut off; its texture is lamellar, and its hardnefs varying in different fpecimens. That which is formed into grains is fuppofed to be the richelt in filver; but even this contains only aboust one or one and a half fer cent. that $\vdots 8$, about 12 or 18 ounces per quintal ; and the poorelk not above 60 grains. Ores that yield about half an ounce of filver per quintal are barcly worth the extracting. Different fpecimens alfo vary in the quantity of fulphur they contain, from 15 to 25 fer cent. and that which contains the lealt is in fome degree malleable. The proportion of iron in this ere is very fmall, but the lead is from 60 to 85 per cent. M. Monnet afferts, that galena is infoluble in the nitrous acid; but Dr Watfon has finuw, that it is completely diffolved by the acid when diluted. The feecitic gravity of galena is from 7.000 to 7.780 . It yiclds a yellow flag when melted.
M. Fourcroy ditinguifhes feveral varieties of this ore. 1. Cubic galena, the cubes of which are of yarious fizes, and found either fingle or in groups; it is often found with the angles truncated, and is common at Freyberg. 2. In maffes, without any regular configuration; very common at St Maire. 3. With large facets. It does not compofe regular cryftals, but is entirely formed of large laminx. 4. With fmall facets, appearing like mica, compofed of white and very brilliant fcales. It is called white filver ore, becaufe it contains a confiderable quantity of that metal. 5. Small grained galena, fo called becaufe it has a very clofe grain. It is likewift very rich in filver, and is found with the foregoing ore. No galena, excepting that of Ca rintlia, is known to be without filver; but it has been obferved, that thofe which afford the moft filver have the fmalleft facets. 6. Galena cryftallized like lead fpar, in hexagonal prifms or cylindrical columns,
contains little filver, and feems to be merely fpathofe lead, mineralized without having loft its form. Cryfals of pure fpathofe lead entirely covered with a very fine galena, are fometimes found in the fame piece, together with others which are changed into galena throughout.
8. An:imonial lead-ore, in which the metal is mineralized by fulphur with filver and regulus of antimony. This is of the fame colour with gralena, but its texture is different, being radiated, filamentous, or flriated. When leated, it yields a white fmoke; and it affords from 40 to 50 per cert. of lead, and from half an ounce to two ounces of filver per quintal.
9. Pyritous lead-ore, mincralized by fulphur with filver and a large proportion of iron. This is of a brown or yellowifh colour; of an oblong or ftalactit:cal form ; friable; and of a lamellar, ftriated, or loofe texture; affording 18 or 20 per cent. of lead at molt, which is obtained merely by melting it, the iron detaining the fulphur. It is ouly a mixture of galena with the brown pyrites.

1o. Lead haineralized by arfenic, was lately difcovered in Siberia. It is of a pale colour externally, but ine ternally of a deep red. It is for the moft part cryftallised in rhomboidal parallelopipeds, or irregular pyranids. Lehman fays, that it contains fulphur, arfenic, and about 34 per cent. of lead; and Mr Pallas fays; that it contains fome filver alfo. It was found near Catherineburg in Siberid; and Lehman fays, that on being reduced to powder, it refembled the beft carmine. A fecimen examined by Mongez was of a yellow. greenifh colour, and was found among quartz in the fame country, and contained fome arfenic. Both thefe, according to M. Magellan, may be eafily reduced by means of a blow-pipe.
11. Stony or fandy lead-ores, confilt either of the calciform or the galena kind, intimately mixed and diffufed through Itones and earth, chiefly of the calcareous or barytic genus. To this fpecies Mongez refers the earthy lead ore, falfely called native mafficot, found in the lead mines of Pompean in Brittany, principally in folid pieces. Thefe are either yellowifh or grey : they appear bright like glafs when broken, and effervefce with acids; whence it appears that the ore con-tains-fixed air. Sometimes it is mixed with clay.
12. The mine of Morngenftern at Freyberg has a peculiar variety of lead-ore containing filver, and which deferves to be noticed on account of its yellow-ifh-brown colour, and likewife on account of its fingular figure, which confifts of fender cylinders. Sometimes it is found in dentritical forms, like the knit cobalf:

Mof of the ores of lead contain filver ; and thofe kinds of galena which do not, are very fearce. In Hungary and Tranfylvania, the lead ore contains a quantity of gold as well as filver. Sometimes the potters ores are found fo poor in filver, that it is not worths the expence of extracting it. Thefe, when free from mixtures of the rock, are employed without any fufion to glaze earthen ware; and a confiderable trade is carried on in the Mediterranean with fuch ores from the mives of Sardinia and France.

Lead, expofed to heat, melts long before it is ignited. By a ftrong heat it becomes vclatile, and flics off in vapours. If fuffered to cool very fowly, and the melted portion be poured off from that which is be.

## L E A

deead. come folid. it is found to be cryftallizeco in quadrangular pyramids. When melted with ths contact of air, is foon becomes covered with a grey dull pellicle, which by proper management is converted into minium, as explained under the article Chemestry; and by this operation it becomes !eavier by about ten punds in the hundred, though it is faid that at Nuremberg it gains twice as much. By ton much heat minium lofes its beautiful red coiour, and affumes that of a pale yellow: by a heat fill more violent, it melts into a tranf. parent glafs, fo fufible, that it penetrates the crucible and efcapes. But if one part of fand be added to three parts of calx of lead, the fand melts, by the affilt. ance of the calk, into a beautiful amber coloured glafs. With two parts of lead and one of fand, it refembles a topaz. A fimilar çuantity of the calx of lead, added to common glafs, does not alter its tranfparence, but gives it a greater degree of weight, and more efpecially a kind of unetuoufnefs, which renders it capable of being cut and polifled more eafly without brakiag. This glafs is very propser for making achromatic lenfes; but is fubject to reins, and to have a gelatinous ap. pearance. "The Englifh (fays M. Fourcroy) call it fint $g$ lefs; our workmen find great difficulty in felecting pieces of any confiderable magnitude, exempt from fries, in that which is imported from England." This great imperfection feems, in Macquer's opinion, to depend on the principles of the glafs not being uniformly combined: for that purpole it is neceflary that it thould be kept in fufion for a long time; but as the lead would by that means be difipated, the fint glafs would lofe a part of its denfity and unctuounnefs, which are its chief merit.
M. Magellan tells us, that it is the purelt cals of lead called minium, made immediately from the metal, and the moft pure quartzous fand, with pure mineral alkall, or rather with good nitre, that produce, when properly melted, the bell fint-glafs. The greater the proportion of red-lead, the heavier is the glafs, and of courfe its refraction the greater ; an effential icquilite for fuch glafs as is employed for the lenfes of achromatic telefcopes. It muft, howeser, be obferved, that glafs made with lead has the defees of being of unequal denfity, for want of a perfect mixture of all its parts; fo that it is extremely difficult to find pieces of a few inches diameter a mong hundred weights of this glafs, that thall be quite free from filanents and frix. By chance the late Mr Dollond procured a pot of pure flint-glafs, from which he made the admirable triple object lenfes of three feet and a half focus, which have been fo mucl admired; but no fuch other glafs has yet been found, though very confiderable premiums have been offered for the method of producing the beft kind of glafs for optical inftruments.

All the calces of lead, efpecially minium, have a great attraction for fixed air. If therefore we fhould defire a cals of lead in perfect purity, it mut be kept defended from the contact of air, or fightly calcined before it is ufed, in order to feparate the fixed air it may have abforbed. When expofed to the air, it tarnifhes in proportion to the dampaefs of the air, and contracts a white ruft, which is not a pore calx, but combined with the fixed air imbibed from the atmofphere. It is not altered by pure water; and there-

## 74 I ] L E A

fore me muld conclude, that the whitih crult with which the internal part of lead pipes through which water runs is urually covered, mutt be owing to the faline fubftances contained in the water.
" All the phenomena of the calcination of lead. (fays M. Magellan), and of its reduction to the metallic flate, fhow that it has the fmallet adhefion to phlogifton; as appears by the fimple action of fire, which feparates both, whilt their attraction is equilly quick. in its reduction to the metallic flate. A common wafer, which owes its colour to red.lead, by being burned in the flame of a candle, inmediately exhibits pure globules or lictle drops of the metal. The readinefs with which lead parts with its phlogiton is fhown by the curious experiment lately performed at Paris by Doctor Luzuriagu penfioner of the court of Spain. He put four ounces of lead fhot wetted with wate into a pint bottle filled with atmospheric air, and clofed with a fopple. Having thaken it feveral times, a black powder was produced, which foon turned white: on opening the bottle at the end of 24 hours, the air was found to have loft a fifth part of its bulk, and to have become phlogilicated. Dephlogitlicatect. air was fill more reduced in bulk; but the contrary tonk place when iutammable air was employed."

Cautlic alkaline lixivia, boiled on lead, diffolve a fmall quantity of it, and corrode more. It has been obferved, that plants do not thrive fo well in leaden as in earthen veffels.
In Hoiland, and perhaps in other places, it has. been cuttomary to correct the moft offenfive expreffed oils, as that of rape-feed and rancid oils of almonds or, olives, by impregnating them with lead. This dangerous abufe may be difcovered by mixing a little of that oil with a folution of orpiment made in limewater: for, on fhaking them together, and foffering them to rell, the oil, if it has any faturnine tint, will appear of an orange red; but if pure, of a pale yellowihh one. A fimilar abufe hab alfo-becn practifed with acid wincs, which diffolve as much of the lead az communicate a fweetifh tafte. This is difcovered in \% fimilar manner; and upon this principle is founded the liquor probatorius, on telt-liquor. This liquor is nothing elfe than a folution of orpiment or liver of fulphur in. lime-water. If a few drops of this folution be pur in a glafs of the fufpefted liquor, it willexhibit a precipitation. like a dark-coloured cloud. This is owing to the attachment of the lead to the fulphur in the orpiment. If lead, or its calces, in powder, be mixed with a folation of hepar fulphuris, a decompofition enfues, but the alkali is not thus deprived of its fulphor. Inltead of this, it is re-converted into vitriolated tartar; the lead feizes the phlogiton of the fulphur, and allows the vitriolic acid to unite with the alkali.

Lead unites with moft other metals. It cannot, however, be united with iron: but if both are expofed to the fire in a proper veffel, the lead foorifies the iron by feizing on its phlogitton; after which it melta with the calx into a dark coloured glafs. This property which lead poffefles, of reducing all the impero feet metals to a glafs, is the reafon of its being ufed in the purification of gold and filver; neither of which can be touched by it, but remain pure in the bottom of the cupel. This procefs is the more complete by
font. reafon of the great efficacy of lead in diffolving earthy bodies. In this refpect it is fo powerful a finx, that no carthen veffel or crucible can contain it when fufed, of whatever materials the velfl be made. A nixisure of saw and burned clay ftands the action of lad for the greatelt length of time; but at laft this alfo gives way, and is corroded in the fides.
lithatge, a fort of refufe of lead, is employed in the compolition of all the finer glaffes called pales, which are defigned as imitations of precious fones. The addition of litharge renders them more folid and brilliant. The principal ingredients are the pureft of flint, purified alkali, horax, and litharge; the other additions, chiefly of metallic calces, are added, mercly for the fakc of tinging them with various colours.

Lead is cmployed in making of various veffels, as cifterns for water, large boilers for chemical and other purpofes, \&c. It is frequently mixed with tin by the pewterers; a practice which M. Fourcroy fets forth as very dangerous, and gives the following procefs for detedting it: "Diffolve two ounces of the fufpected metal in five ounces of a good pure nitrous acid. The calx of tin is to be wathed with frur pounds of diftilled water, and dried, and the water evapurated by the heat of a waterbath. By this evaporation nitre of lead is procured; which being calcined, the weight of the refidue hows the quantiry of metal contained in the tin, allowing a few grains for the augmentation of weight arifing from calcination, as well as the other metallic fubftances, fuch as zinc and copper, which the tin under examiuation may contain. Bayan and Charlard by this method afcertained, that fine wrought tin or pewter contains about 10 pounds of lead in the 100; and that the common tin fold in France under that name, often contains 25 pounds in the fame quantity ; an enormous dofe, fufficient to expofe thofe who ufe veffels made of this componition to the greatell danger."

There are feveral methods uled by pewterers to dif. cover the finenefs of tin. This is done in fome cafes by fimple infpection, the judgment being affilled by the weight and noife produced in bending the metal. But the beft method is by trying the fpecific gravity of the metal: which will difcover a very fmall quantity of lead, the difierence beiwist the two metals being to confiderable.

Lead, when taken in:o the lnman bady, is productive of yarious diforders, particularly a dangerous kind of colic terminating in a pally; and as all the common earthen ware is glazed with minium, the ufe of it canact be fuppofed to be void of danger in all cafcs. Fountains, or veffels of lead which contain water, often comounicate a nozious quality to it when fuffered to remain long full. Its vapour is danfroms to the workmen who meit it, and the fumes falling ufon the grafs rencer it poifonous to the cattle Wl.o eat it ; the fith who inhabit the waters near Emelting boufes foon die, nor is it fafe for any animal to drink of it, In cafes of poifoning by lead, antimonial metics are recommended. Navier preferibes liver of fulphur and hepatic waters. The internal ufe of lead is cestainly dangerous, though it is often prefcribed in medicine; and even the external ufe of it is not altugether fafe. Certain it is, that all workmen syho deal much in lead, are fubject to the cholic a.
bove merntioned from the habitual contact of the me. tal or its calces, even though they neither take it in. ternally, nor are expofed to its fumes.

Black-LEAD (Plumbago), a genus of inflanımable fubltances, frequently confounded with molybidana; the appearance of which is nearly the fame, though the qualicies are very different. Black-lead, when pure, is extremely black; but when fref cut, appears of a bluifh white, and fhining like lead. It is micaceous, and minutely fcaly ; eaflly broken, and of a granular and dull appearauce when broken. Its tract on paper is much darker than that of mnlyodxna, which has a fine filvery appearance ; by which means they are ea. fily diftinguifhed from one another. Black-lead is too foft to Itrike fire with fteel: it is infoluble in acids; but in a very ftrong fire, when expofed to the air at the fame time, it is entirely volatile, leaving only a little iron and a fmall quantity of filiceous earth. It may be decompofed by deflagration with nitre; but the common fluses are not capable of procuring its fufion. Its fpecific gravity is from 1.957 to 2.267. According to Scheele, this fubftance confilts of phlogifon com. bined with aerial acid: but M. Pelletier has fhown, that when pure it neither produces fixed nor inflammable air; both which, when found, are entirely owing to the fubftances that are mixed with it. Mr Scheele fays, that one part of plumbago requires ten of nitrc to decompole it, but charcoal only five. The conclu. fion drawn from hence, aiz. that plumbago contains twice as much phlogilton as charcoal, however, is by no means jult; for the phlogiton may be defended from the action of the nitre, by means we caunot pof. fibly know, in the one and not in the other. Dr Pheitley's experiments on the diffipation of charcoal into inflammable air alfo fhow, that charcoal is little or nothing elfe than mere phlogifton, fo that no fubflance whatever can contain more. From thefe experiments Mr Kirwan concludes, that 100 parts of plumbage contain 67 of phlogillon; becaufe 100 grains of nitre contain 33 of real nitrous acid: all of which are decompofed when it receives as much phlogilton as is neceflary to convert it into nitious acid, or a litile mure. But 33 grains of nitrons acid are converted into nitrous air by 67 grains of phlogiton; the remaining 33 parts may be water, or other volatile fubitance. By the experiments of Meffrs Gahn and Hielm, it appears, that 100 grains of plumbagro, calcined in a muthe, lott 90 grains in weight ; the remainder being a ferruginous earth, and the fulphureous fmell flowed that it contained fome pyrites, both which were accidental to the black lead. M. Pelle:ier, however, as has already been hinted, affirms, that plumbago is volatilized in a ftrong fire, without producing any aerial vapour whatever; whence we mut conclude, that the plumbago ufed by Scheele had not been quite pure. In clofe velfels, howe ver, all agree, that black-leal futains a vehement fire for i: long time without any fentible diminution of weight. This is fimilar to charcoal ; which for a long time was fuppofed to be indeftructible in clofe veffels: but Dr Priellley has thown, that in a very violent tire, in clufe veffels, charcoal begins to emit inflammable air, and continues to do fo without any end of the procefs that he could perceive; whence it is probable, that in this way alfo charcoal might be entircly difperfed, provided we could find veffels capable

Lead. of fuftaining fuch a long and vehement heat. No ex. periments have been made with black-lead in this way, either with the folar heat in vacuo, or with a violent heat in an iron or other veffel capable of refifting a long continued heat.

Cronftedt. when treating of this mineral, obferves, that " Mr Pott examined it in clofe veffels, and Mr Quit in an open fire; from which difference in the mode of treatment, different notions had arifen: becaufe the black lead, when treated in clofe veffels, or when immediately put into a flrong charcoal fine, is almof unalterable; but in a calcining heat. becomes almof entirely volatile. This is the cate with feveral of the other mineral phlogittons; and from this we may in general learn, how neceffary it is to examine the mineral bodies by many and different methods, and to endeavour to multiply the experiments more than has hitherto keen done."

With regard to the reduction of metallic calces, which ought to be accomplifhed by this phlogiffic fubflance, M. Pelletier affirms, that it cannot be done unlefs the black-lead be mixed with fixed alkali, in the fame manner as when charcoal is employed in fuch circumflances. It cannot be combined with iron, as Bergman afferts; nor with any other metal, though it may be fimply interfperfed betwixt its particles. M. Pelletier indeed owns, that there is a kind of plumbago found fwimming over the melted iron in large furnaces where iron-ores are fmelted; but he thinks, that this muft have been naturally mixed with the mineral. It is alfo the only known plumbago of a very ditinct lamellar form ; as he obferved in the pieces obtained from the iron works at Vallancy in the French province of Berry.

Black-lead is found of different kinds; viz. 2. Of a fleel.grained and dull texture; naturally black, but when rubbed affording a dark-lead colour. 2. Of a granulated and fcaly appearance at the fame time. It is found in different countries, as Germany, France, Spain, the Cape of Good Hope, and America; but generally in fmall quantities, and of very different qualities. The beft fort, however, and the fitteft of all for making pencils, is that met with in the county of Cumberland in England. It is found in fuch plenty at a place called Borrowdale in this county, that hence not only the whole ifland of Britain, but the whole continent of Europe, may be faid to be fupplied. "I have feen (fays M. Magellan) various (pecimens from different countries; but their coarfe texture and bad quality cannot bear any comparifon with that of Borrowdale; though it fonetimes, but feldom, contains pyritaceous particles of iron. It is but a few years ago, that this mine feemed to be almolt exhaufted; but by digging fome few yards through the ftrata underneath, according to the advice of an experienced miner, whofe opinion had been long unattended to, a very thick and rich vein of the beft black-lead has been difcovered, to the great joy of the proprietors and advantage of the public."

The principal ufe of black-lead is for making pencils for drawing; which have the advantage of marking paper very diflinctly for a time, though their traces may afterwards be entirely rubbed out by foft bread or elaftic gum. To form the pencils, the tead is cut into thin parallelopipeds, and put into quadrangular
grooves cut in pieces of cyprefs wood; and a nit buinc ghed ovcr, they are worked into fmall cylinders like quills. A coarfer kind are made by working up the powder of black-lead with fulphur, or fome mucilayinous fubfance; but thefe anfwer only for carpenters, or fome very coarfe dawings. One part of plumbago with thrce of clay, and fome cows hair, makes an excellent coating for retorts, as it keeps its form even after the retorts liave melted. The famous crucibles of Yplen are formed of plur. bago nixed with clay. Thefe are known in Eritain by the rame of Heffan crucibles; but a manufacture of the fame kind is now efta. blifhed at Cheifea in the neighbourhood of I,ondon, where crucibles are manufaclured nearly of the fane quality with the foreign ones. The powder of blacklead ferves alfo to cover the ftraps for razors; and it is with it that the caft-iron work, fuch as floves, \&c. receive a glofs on thei: furface. An application, however, petha.ps as ufeful as any other, is that of black-lead to fmooth the furfaces of wooden work which are fubjected to much friction, as wooden ferews, packers preffes, \&x.; neither greafy nor oily fubtlances. nor foapy ointments, produce luch a good effect upen them.

## Milled Lead. See Chemistry, ${ }^{\circ} 1219$. <br> Porfon of Lesid. See Poison. <br> Sheet-Leqd. See Plumiery.

LEAF, a part of a plant extended into length ancs breadth in fuch a manner as to have one fide diftinguifhable from the other. This is Miller's definition. Linnxus denominates leaves "the organs of motion or mufcles of the plant."-The leaves are not merely ornamental to plants; they ferve very uleful purpoles, and make part of the organs of vegetation.

The greater number of plants, particularly trees, are funnilhed with leaves : in mufhrooms, and thrubby horfe-tail, they are totally wanting. Ludwig defines leaves to be fibrous and cellular proceffes of the plant, which are of various figures, but generally extended into a plain membranaceous or Akinny fubitance. They are of a deeper green than the foot-talks on whicls they ftand, and are formed by the expanfion of the veffels of the flalk, among which, in feveral leaves, the proper veffels are ditlinguifhed by the particulat tafte, colour, and fmell, of the liquors contained with. in them.

By the expanfion of the veffils of the falk, are produced feveral ramifications or branches, which, crofsing each other mutually, form a kind of net; the mefhes or interfices of which are filled up with a ten. der cellular fubflance, called the pulp, pith, or farinchyma. This pulpy fubftance is frequently confumed by certain fmall infects, whilit the membranous net remaining untotiched exhibits the genuine fiseleton of the leaf.

The net in queftion is covered externally with an epidermis or fcarf-fkin, which appears to be a continuation of the farf-nkin of the ftalk, and perhape of that of the ftem. M. Defaufure, a judicious nitturalift, has attempted to prove, that this fearf-fkin, like that of the petals, is a true bark, compofed itfelf of an epidermis and cortical net; thefe parts feem to be the organs of perfpiration, which ferve to dimprate the fuperfluaus juices.

The cortical net is furniftec, principally on the Surface.

## L E A [ 744 ] £ E A

Guld-Lea'. Iufface of the leaf, with a great number of fuckers or abforhent veffels, deffined to imbibe the humidity of the air. The upper furface, turned towards heaven, ferves as a defence to the lower, which looks downsward ; and this difpofition is fo effential to the vegetable economy, that, if a branch is overturned in fuch a manner as to deftroy the natural dirction of the leaves, they will, of themfelves, in a very fhort time, sefume their former pofition; and that as often as the branch is thus overturned.

Leaves, then, are uffeful and neceffary organs; trees perifh when totally divefted of them. In general, plants ftript of any of their leaves, cannot fhoot vigosoufly: witnefs thofe which have undergone the depredations of infects; witnefs, likewife, the very common practife of Atripping off fome of the leaves from plants, when we would fufpend their growth, or diminifh the number of their floots. This method is fometimes obferved with corn and the efculent graftes; and, in cold years, is practifed on fruit-trees and vines, to render the fruit riper and better coloured: : but in this cafe it is proper to wait till the fruits have acquired sheir full bulk, as the leaves coniribute greatly to their growth, but hinder, when too numerous, that exquifite rectifying of the juicea, which is fo neceflary to runder them delicious and palatable.

When vegetation ceafes, the organs of perfpiration and infpiration become fuperfluous. Plants, therefure, are not always adorned with leaves: they pro. duce new ones every year; and every year the greater part are totally divefted of them, and remain naked during the winter. See Plant.

## Leaf-Injér. See Cimex.

Leaf, in clocks and watches, an appellation given to the notches of their pinions.
Goll- Lesff, ufually fignifies fine gold beaten into plates of an exceeding thinnefs, which are well known in the arts of gilding, \&c. The preparation of goldleaf, according to Dr Lewis, is as follows.
"The gold is melted in a black-lead crucible, with fome borax, in a wind-furnace, called by the workmen a auind bole: as foon as it appears in perfect fufion, it is poured out into an iron ingot mould, fux or cight inches long, and three quarters of an inch wide, previoufy greafed, and heated, fo as to make the tallow run and fmoke, but not to take flame. The bar of grold is made red hot, to burn off fle unctuous matter, and forged on an anvil into a long plate, which is further extended, by being paffed repeatedly between polifted Ateel rollers, till it becomes a ribbon as thin as paper. Formerly the whole of this extenfore was procured by means of the hammer, and fome of the French workmen are fill faid to follow the fame practice : but the ufe of the flatting-mill both abridges the operation, and renders the plate of more uniform thicknefs. The ribbon is divided by compafes, and cut with fheers into equal pieces, which confequently are of equal weights : thefe are forged on an anvil till they are an inch fquare; and afterwards well nealed, to correct the rigidity which the metal has contracted in the hammering and flatting. Two ounces of gold, or 960 grains, the quantity which the workmen ufually melt at a time, make 150 of thefe fquares, whence each of them weighs lix grains and two-fifths; and as 902 grains of gold made a cubic inch, the $\mathrm{N}^{\circ} 179$.
thicknefs of the fquare plates is about the 766 th part Gold. Leaf. of an inch.
" In order to the further extenfion of thefe pieces into finc leaves, it is neceffary to interpofe fome fmooth body between them and the hammer, for foftening its blow, and defending them from the rudenefs of ita immediate action : as alfo to place between every two of the pieces fome proper intermedium, which, while it prevents their uniting together, or injuring one another, may fuffer them freely to extend. Both thefe ends are anfwered by certain animal membranes.
" The gold-beaters ufe three kinds of membranes; for the outfide cover, common parchnment made of fheep-finin for interlaying with the gold, firlt the fmoothelt and clofeft vellum, made of calf-fkin; and afterwards the much finer Rkins of ox-gut, flript off from the large Atraight gut lit open, curioully prepared on purpofe fur this ufe, and hence called goldbeater's Jin. The preparation of thefe laft is a dittinct bufinefs, practifed by only two or three perfons in the kingdom, fome of the particulars of which I have not fatisfactorily learned. The general procefs is faid to confift, in applying one upon another, by the fmooth fides, in a moit ltate, in which they readily cohere and unite infeparahly; ftretching them on a frame, and carefully feraping of the fat and rough matter, fo as to leave only the fine exterior membrane of the gut; beating them between double leaves of paper, to forcc out what unctuofity may remain in them; moiftening them once or twice with an infufion of warm fpices; and laftly, drying and preffing them. It is faid, that fome calcined gypfum, or platter of Paris, is rubbed with a hare's foot both on the vellum and the ox-gut Rins, which fills up fuch minute holes as may happen in them, and prevents the gold-leaf from ficking, as it would do to the fimple animal-membrane. It is obfervable, that, notwithftanding the vaft extent to which the gold is beaten between thefe flins, and the great tenuity of the 裡的 themfelves, yet they fuftain continual repetitions of the procefs for feveral months, without extending or growing thinner. Our workmen find, that, after 70 or 80 repetitions, the flkins, though they contract no flaw, will no longer permit the gold to extend between them; but that they may be again rendered fit for ufe by impregnating them with the virtue which they have loft, and that even holes in them may be repaired by the dexterous application of frefh pieces of kin : a microfcopical examination of fome flins that had been long ufed plainly Ahowed thefe repairs. The method of refloing their virtue is faid in the Encyclop'dic to be, by interlaying them with reaves of paper moittened with vinegar white-wine, beating them for a whole day, and afterwards rubbing them over as at lirft with plater of Paris. The gold is faid to extend between them more eafily, after they have been ufed a little, than wher they are new.
"The beating of the gold is performed on a fmooth block of black marble, weighing from 200 to 600 pounds, the heavier the better; about nine inches fquare on the upper furface, and fometimes lefs, fitted into the middle of a wooden frame, about two feet fquare, fo as that the furface of the marble and the frame form one continuous plane. Three of the lides are furnithed with a ligh ledre; and the front, which

## L E A

taken for the firft operation, have four times the areaGold-Leaf. of thole ufed among us, the number of leaves from an equal area is the fame in both methods, viz. I6 from a fquare inch. In the beating, however fimple the procefs appcars to be, a good deal of addrefs is requifite, for applying the hammers fo as to extend the metal uniformly from the middle to the fides: one improper blow is apt not only to break the gold leaves, but to cut the fkins.
" After the laft heating, the leaves are taken up by the end of a cane inftrument, and, being blown flat on a leather-cuhion, are cut to a fize, one by one, with a fquare frame of cane made of a proper fharpnefs, or with a frame of wood edged with cane: they are then fitted into books of 25 leaves each, the paper of which is well fmoothed, and rubbed with red bole to prevent their fticking to it. The French, for fizing the leaves, ufe only the cane-knife; cutting them fiff ftraight on one fide, fitting them into the book by the flraight fide, and then paring off the fuperfluous parts of the gold about the edges of the book. The lize of the French gold leaves is from fomewhat lefs than three inches to three and three quarters fquare; that of ours, from three inches to three and three-eighths.
"The procefs of gold-beating is conliderably influenced by the weather. In wet weather, the flions grow fomewhat damp, and in this fate make the extenfion of the gold more tedious: the French are faid to dry and prefs them at every time of ufing; with care not to overdry them, which would render them unfit for farther fervice. Our workmen complain more of froft, which appears to affect the metalline leaves themfelves: in froft, a gold-leaf cannot eafily be blown flat, but breaks, wrinkles, or runs together.
"Gold-leaf ought to be prepared from the finelt gold; as the admixture of other metals, though in too fmall a proportion to fenfibly affect the colour of the leaf, would difpofe it to lofe of its beauty in the air. And indeed there is little temptation to the workman to ufe any other; the greater hardnefs of alloyed gold occationing as much to be loft in point of time and labour, and in the greater number of leaves tbat break, as can be gained by any quantity of alloy that would not be at once difcoverable by the eye. All metals render gold harder and more difficult of extenfion: even filver, which in this refpect feems to alter its quality lefs than any other metal, produces with gold a mixture fenfibly harder than either of them feparately, and this hardnefs is in no art more felt than in the gold-beater's. The French are faid to prepare what is called the green gold-leaf, from a compofition of one part of copper and two of filver with eighty of gold. But this is probably a miftake: for,fuch an admixture gives no greennefs to gold: and I have been informed by our workmen, that this kind of leaf is made from the fame fine gold as the higheft gold coloured fort, the greenif hue being only a fuperficial teint induced upon the gold in fome part of the procefs: this greenifh leaf is little otherwife ufed than for the gilding of certain books.
"But though the gold• beater cannot advantageoufly diminifh the quantity of gold in the leaf by the admixture of any other fubftance with the gold, yet means have been contrived, for fome particular purpofes, of faving the precious metal, by producing a

## L E.A

## I. E A

I.eague. kind of leaf called party-gold, whofe bafis is filver, and which has only a fupericial coat of gold upon one fide : a thick leaf of filver and a thinner one of gold, laid flat on one another, heated and preffed together, unite and cohere; and being then beaten into fine leaves, as in the foregoing procefs, the gold, though its quantity is ouly about one-fourth of that of the filver, continues every where to cover it, tbe extenfion of the former keeping pace with that of the latter.

LEAGUE, a meafure of length, containing more or fewer geometrical paces, according to the different ${ }^{2}$ \{ages and cuftoms of countries. A league at fea, where it is chiefly ufed by us, being a land meafure molly peculiar to the French and Germans, contains 3000 geometrical paces, or three Enylith miles. The French league fometimes contains the fane meafure, and in fome parts of France it conlifts of 3500 paces: the mean or common league confifts of 2400 paces, and the little league of 2000 . The Spanifh leagues are larger than the French, 17 Spanifl leagues making a degree, or 20 French leagues, or $69 \frac{1}{2}$ Englifh tlatute miles. The Dutch and German leagues contain each four gengraphical miles. The Perfian leagues are presty near of the fame extent with the Spanifh; that is, they are equal to four ltalian miles : which is pretty near to what Herodotus calls the length of the Perlian parafang, which contained 30 fladia, eight whereof, according to Strabo, make a mile. The word concs from leuca, or leuga, an ancient Gaulih word for an itinerary meafure, and retained in that fenfe by the Romans. Some derive the word leuca from tevoor, "white;" as the Gauls, in imitation of the Romans, marked the fpaces and diflances of their roads with winte ftones.

League alfo denotes an alliance or confederacy between princes and ftates for their mutual aid, either in attacking fome comenon enemy, or in defending themfelves. The word comes from liga, which in the corrupt Latin was ufed for a confederacy: $\mathcal{V}^{n}$ a quis cum alio ligatur.

Leagues, among the Greeks, were of three forts: 1. Exuvir, £uvin $n n$, or Etpnnn, whereby both parties were obliged to ceafe from hoftilities, without even molelt. ing the allies of each other; 2. Erica $\chi^{\prime x}$, whereby they ensaged to lend affiftance to each other in cafe of invation; and, 3 . $\sum_{v, \mu x} \chi^{\prime \alpha}$, whereby they engaged to have the fame friends and enemies, and to alfit each other upon all occafious. All thefe leagues were confirmed with oath, and imprecations, and facrifices. The vietims inolt generally ufed were a boar, ram, or geat, fometimes all three; and fometimes bulls and lambs. They cut out the teftieles of the animal, and good upon them while they fwore; and fome of the hair of the victim was diftributed to all prefent. Then they cut the animal's throat, which was called opxtee remever, in Latin, ferire fedus.-This done, they repeated their oaths and imprecations, calling the gods to witnefs the honetly of their intentions. A libation was then made of wine, which at this time was mixed, to imply their conjunction and union: while this was pouring out, they prayed that the blood of him who thould break the treaty might be poured out in like manner. Upon thefe occafions no part of the victim was eaten. Still further to increafe the folemnity of this obligation, the league was engraven upon brafs,
fixed up in places of public concourfe, and fometimes read at the folemn games. Some exchanged certain $\sum_{0 \mu \beta} \beta_{\lambda \alpha}$ or tefera upon the occafion, and frequenty fent embaffadors, on fome appointed day, to keep them in mind of their engagements to each other.
The ceremonies of the Romans in making leagues were performed by the Feciales. See Fectaces.

Lesgues of the Grifons, are a part of Switzerland. confifting of three fubdivifions, viz. the upper league, the league of the houfe of God, and the league of the ten jurifdictions. See the article Grisons.
The Lesaue, by way of eminence, denotes that famous one on foot in France, from the year $15 \%$ to 1593. Its intent was to prevent the fucceffion of Henry IV. who was of the refornied religion, to the crown; and it ended with his abjuration of that faith.
The leaguers, or confederates, were of three kinds. The zealous lcaguers aimed at the utter dellruction not only of the Huguenots, but alfo of the minillry. The Spunibs leaguers bad principally in view the transferring the crown of France to the king of Spain, or the infanta his daughter. The moderate leaguers aimed only at the extirpation of Calvinifn, without any alteration of the government.
LEAK, at fea, is a hole in the mip, through which the water comes in. A fhip is faid to لpring a leak when the begins to leak or to let in the water. The manner of flopping a leak is to put into it a plug wrapprd in oakum and well tarred, or in a tawrpawling clout, which keeps out the water, or nailing a piece of theet lead on the place. Scamen fometimes thop a leak by thrufting a piece of falt beef into it. The fea-water, fays Mr Boyle, being frefher than the brine imbibed by the beef, penetrates into its body, and caufes it to fwell fo as to brar ftrongly againlt the edges of the broken plank, and thereby fops the influx of the water. - A ready way to find a leak in a hhip is to apply the narrower end of a fpeaking trumpet to the ear, and the other to the fide of the fhip where the leak is fuppofed to be; then the noife of the water iffuing in at the leak will be heard dittinctly, whereby it may be difcovered.

LEAKAGE, the flate of a veffel that laks, or lets water or other liquid noze in or cut.

Leakage, in commerce, is an allowance of 12 per efnt. in the cuftoms, allowed to importers of wines for the wafte or damage it is fuppofed to have received in the paffage : an allowance of two barrels in 22 is alfo made to the brewers of ale and beer by the excifeoffice.

LEAKE (Richard), maftergunner of England, was born at Harwich in 1629 , and was bred to the fea. At the reftoration, he was made maller-gunner of the Princefs, a frigate of 50 guns; and in the firt Dutch war dillinguifhed himfelf by his fkill and bravery in two extraordinary actions ; one againft 15 fail of Dutch men of war ; and another in 1667 againit two Danes in the Baltic, in which the commanding offcers of the l'rincefs being killed or defperately wounded, the command, according to the rules of war at that time, fell to the gunner. In 1669, he was promoted to be gunner of the Royal Prince, a firll-rate man of war. He was engaged, with his two fons Henry and John, in the battle againt Van Tromp, in 1673 ; when the Royal Prince had all her mafts fhot away,

## L E A [ 747 ] L E A

cate. near 400 of her men killed and difabled, and moll of her upper tier of guns difmounted. As fie lay thus like a wreck, a great Dutch man of war came down upon her with two fire-fhips, either to burn or carry lier off; and Captain Rooke, afterwards Sir George, thinking it impoffible to defend her, ordered the men in fave their lives, and the coloure to be fruck. Mr Leake hearing this, ordered the lieutenant off the quarter deck, and took the command upon himfelf, faying, "The Royal Prince fhall never be given up to the enemy while I am alive to defend her." The undaunted fpirit of the brave gunner infpired the fmall refidue of the fhip's company with refolution: they returned with alacrity to the fight, and under the direction of this valiant gunner and his two fons funk both the fire-fhips, and obliged the man of war to theer off; and having thus faved the Royal Prince, be brought her into Chatham. But Mr Leake's joy in obtainiug this victory was damped by the lofs of Henry, his eldelt fon, who was killed near him. Soon after, Mr Leake was preferred to the command of a yacht, and alfo made gunner of Whitehall. In 1677, he obtained a grant for life of the ofice of matter-gunner of England, and fore-keeper of the ordnance at Wool. wich. By thefe pofts he had full feope for his genius. He accordingly, among other things, invented the cunflee-piece; and contrived to fire a mortar by the blall of a piece, which has been ufed ever fince. He was alfo the principal contriver of what the French call infernals, ufed at the bombardment at St Malo's in 169. . Mr Leake bad a furprifing genius for all inventions of this kind; and had frequent trials of tkill with French and Dutch gunners and engineers in Woolwich warren, at which king Charles II. and the duke of York were often prefent, and he never failed to excel all his competitors: nor was he lefs filled in the art of making compofitions for fireworks; of which he likewife made frequent trials with equal fuccef.

Leake (Sir Johri), an Englifh admiral, diftinguifhed by his bravery and fuccefs, was bom in $\mathbf{1 6 5 6}$, and was taught mathematics and gunnery by Mr Richard Leake his father, who was maftergunner of England. Entering early into the navy, he diftinguifhed himfelf under his father in 1673 , in the menorable engagement between Sir Edward Spragg and Van Tromp, when hut 16 years of age; and being afterwards made captain, he fignalized himfelf, among other occafions, by executing the defperate attempt of convoying fome victualers into Londonderry, which obliged the enemy to raife the fiege; and at the famous battle of La Hogue. In 1702, being made commodore of a fquadion, he deftroyed the Freach trade and fettlements at Newfoundland, and reftored the Engliff to the poffeffion of the whole illand. On his return he was created rear-admiral; foon after, he was made vice-admiral of the blue, and was afterwards knighted. He was engaged with admiral Rook in taking Gibraltar : foon after which, he particularly diflinguifhed himfelf in the general engagement off Malaga; when commanding the leading fquadron of the van, conffiling only of fix thips, he drove that of the enemy, contifling of 13 , out of the line of battle, fo dif. abled that they never returned to the fight. In 1705 ,
he relieved Gibraltar, which the French had befieged Leake. hy fea, and the Spaniards by land, fo feafonably, that the enemy was to have attacked the town that very night in feveral places, and would undonbtedly have made themfelves mafters of it. Five hundred Spaniards had, by the help of rope-ladders, climbed up the rocks by a way that was thought inacceffible. At the fame time they had got a great number of boats to land 3000 men at the New Mole, who, by making a vigorous affault on the fide next the fea, were to draw the garrifon to oppofe that attack, while the 500 concealed men rulted into the town. Thefe being the next day drawn by hunger out of their ambufeade, were difcovered; on which Sir John affefing the garrifon with failors and marines, they were attacked with fuch vigour, that, though they had taken an oath not to furrender to the Englifh, 190 common foldiers and 30 officers took quarter; 200 were killed on the fpot; and the rell, who endeavoured to make their efcape, fell headlong down the rock. He was foon after made vice-admiral of the white, and then twice telieved that fortrefs. 'The laft time, he attacked five flaps of the French fleet coming out of the bay, of whom two were taken, and two run afhore and were deftroyed: baroa Pointi died foon after, of the wounds he received in the battle; and in a few days the enemy raifed the fiege. In the year 1705, Sir Jolin was engaged in the reduction of Barcelona; and the next year relieved that city, when it was reduced to the laft extremity, and obliged king I'hilip to raife the fiege. Soon after he took the city of Carthagena; from whence proceeding to Alicant and Joyce, both thefe fubmitted to him; and he concluded the exploits of that year with the reduction of the city and ifland of Majorca. Upon his return home, prince George of Dermark made him a prefent of a ring valued at $q 00 \mathrm{l}$. and he had the honour of receiving 1000 l. from the queen as a reward for his fervices. Upon the unhappy death of Sir Cloudefly Shovel, in 1707, he was made admiral of the white, and commander in chief of her majelty's flect ; and the next year, furprifing a convoy of the enemy's corn, he fent it to Barcelona, and thus faved both that eity and the confedcrate army from the dauger of famine: foon after, convoying the new queen of Spain to king Charles her confort, her majefly made kim a prefent of a diamond ring of 500 pounds value. He then proceeded to the ifland of Sardinia, which he reduced to the obedience of king Charles: and foon after affited the lord Stathope in the conquelt of Minorca. Then returning home, lie was appointed one of the council to the lord high admiral ; and in 1709, was made rear admiral of Griat Britain. He was feveral times chofen member of parliament for Rochefter ; and in 1712 conducted the Englifh forces to take poffeffion of Dunkirk. Dut upon the acceffion of king George I. he was fuperfeded, and allowed a penfion of 600 l. a-year. After chis he lised privately till his death, which happened at his houle in Greenwich in 1720.

Leake (Stephen Martin, Efqi) fon of Captain Martin, went through different ranks in the heralds office till he came to be garter. He was the filft perfon who wrote profeffedly on our Englifh coins, two editions of his "Hiftorical Account" of which were

## L E A

xeander publihed by him with plates, under the title of Num. Leap. mi Britannici Hiforia, London, 1726, 8vo; the fecond, much improved, London, 1745 , 8vo. He printed, in 1750, "The Life of Sir Jobn Leake, knight, admiral of the fleet," \& ${ }^{2}$. to whom he was indebted for a confiderable eftate; which the Admiral devifed to truftees for the ufe of his fon for life; and upon his death to Captain Martin (who married Lady Leake's fifter) and his heirs: By which means it cane to the Captain's fon; who, in gratitude to the memory of Sir John Leake, wrote an accurate account of his life, of which only 50 copies were printed. In 1766 , he printed alfo 50 copies of "The Statutes of the Order of the Garter," 4to. He died in 1773; and was buried in his clrancel in the parifh church of Thorp in Eflex, of which manor he was lord.

LEANDER, in poetic hiftory, a young man of Abydos in Afia. He ufed to fwim over the Hellefpont by night to vifit Hero his miftrefs, who fet forth a light to guide him: but in a tempeltuous win-ter-night he was drowned; upon which Hero feeing him dead on the fhore, calt herfelf headlong from the tower, and died alfo. See Hero.

LEAO, in natural hiftory, a nineral fubtance approaching to the nature of the lapis lazuli, found in the Eaft Indies, and of great ufe in the Chinefe porcelain inanufactures, being the fireft blue they are poffeffed of. This flone is found in the frata of pitcoal, or in thofe of a yellowifh or reddifl earth in the neighbourhood of the veins of coal. There are often found pieces of it lying on the furface of the ground, and thefe are a fure indication that more will be found on dipping. It is generally found in oblong pieces of the fize of a finger, not round, but Hat. Some of this is very fine, and fome coarfe and of a bad colour. The latter is very common; but the fine fort is fcarce, and greatly valued. It is not eafy to diftinguifh them at fight, but they are found by experiment; and the tryiug one piece is generally fufficient for judging of the whole mine, for all that is found in the fame place is ufually of the fame fort.

The manner of preparing it for ufe is this: They firt wafh it very clean, to feparate it from the earth or any other foulnefs it may have: they then lay it at the bottom of their baking furnaces; and when it has been thus calcined for three or four hours, it is taken out, and powdered very fine in large mortars of porcelain, with fone pelles faced with iron. When the powder is perfectly fine, they pour in boiling water, and grind that with the reft, and when it is thoroughly incorporated, they add nore, and finally pour it off after fome time fettling. The remainder at the bottorn of the mortar, which is the coarfer part, they grind again with more water; and fo on till they have made the whole fine, excepting a little dirt or grit. When this is done, all the liquors are mixed together, and well ftirted. They are fuffered to fland two or three minutes after this, and then poured off with the powder remaining in them: this is fuffered to fubfide gradually, and is the fine blue ufed in their beft works, our common fmalt Selving for the blut of all the common clina ware.

LEAP, in mufic, is when the fong does not proceed by conjoint degrees, as when between each note shere is an interval of a third, a fourth, fifth, \&xc.

Leap. Yeat. See Year, and Chronology, $n^{\circ} 24$. Lovers-Zear. See Leucata.
LEAPING, or Vaulting, was an exercife much ufed both anongth the Grecks and Romans. The Grecians called it is $\mu \alpha$, and performed ir with weights upon their heads and fhoulders. Sometimes they carried the weights in their hands, which were of different figures, but generally oval and made with holes or covered with thongs, through which the contend. ers put their finge:s. Thefe weights were called Axinpts. The contelt was who conld leap the highe?t and fartheft. The place from whence they jumped was called BAinp, and that to which they leaped, soxapusva, becaufe the ground was there dug up. This exercife was pelformed in the fame manner by the Romans.

LEAR, the name of a Britif king faid in old chronicles to have fucceeded his father Bildud, about A. M. 3160 . The flory of this king and his three daughters, is well known from Shakefpeare's excellent tragedy founded on it.

LEASE, from the French laifer, demittore, "to let," in law, a demife, or letting of lands, tenements, or hereditaments, unto another for life, term of years, or at will, for a rent referved.

A leafe is either written, called an indenture, deedpoll, or leafe in writing; or by word of mouth, calicd leafe parole.

All eftates, interefts of frechold, or terins for years in lands, \&c. not put in writing and figned by the parties, fhall have no greater effect than as eftates at will; unlefs it be of leafes not exceeding thee years from the making; wherein the rent referved thall be two-thirds of the value of the things demifed. Leafes exceeding three years muft be made in writing; and if the fubstance of a leafe be put in writing, and figned by the parties, though it be not fealed, it thall have the effect of a leafe for years, \&c.

An affigment differs from a leafe only in this; that by a leafe one grants an intereft lefs than his own, referving to himfelf a reverfion; in affignments he parts with the whole property, and the affignee llands to all intents and purpofes in the place of the affignor.

Lease, in Scotslaw. See T'ack.
Lease and Releafe, a fpecies of conveyance ufed in the Englifh law, firf invented by Serjeant Moore, foon after the ftatute of ufes, and now the moft common of any, and therefore not to be fhaken; though very great lawyers (as particularly Mr Noy) have formerly doubted its validity. It is thus contrived. A leafe, or rather bargain and fale, upon fome pecuniary confideration, for one year, is made by the tenant of the freehold to the leffee or bargainee. Now this, without any inrolment, makes the bargainor ftand feifed to the ufe of the bargainee, and velts in the bargainee the $u f_{e}$ of the term for a year; and then the ftatute immediately annexes the poflefion. He therefore, beiug thus in poffefion, is capable of receiving a releafe of the freehold and reverfion, which mult be made ti a tenant in poffction: and according. ly , the next day, a releafe is granted to him. This is held to fupply the place of livery of reifin; and fo a conveyance by leafe and releafe is faid to amount to a feuffment.

LEASH, among fportimen, denotes three crea-

The term leafbalfo fignifies a line to hold in a hunting dog; and a fmall long thong of leathcr, by which a falconer holds his hawk.

LEASING making, in Scots law, the uttering of words tending to excite difoord between the king and his ptople: alfo called verbal feclition.

LEATHER, the fin of feveral forts of beafts dreffed and prepares' for the ufe of various manufacturers, whole bufinefs it is to make them up.

Dyeing of Lesthek, Skins, \&c. Blue is given by fteeping the fubject a day in urine and indigo, then boiling it with alum: or it may be given by tempering the indige with red-wine, and wafhing the fleins therewith. Red is given by wathing the 隹ins, and laying then two hours in galls, then wringing them out, dipping them in a liquor made with liguftrum, alum, and verdigreafe in water; and lafly, in a dye made of brazil-wood, boiled with ley. Purple is given by wetting the flins with a folution of roche alum in warm water; and, when dry again, rubbing them with the hand with a decoction of log. wood in colder. Green is given by fmearing the fkin with fap-green and alum-water boiled. Dark green is alfo given with ftecl-filings and fal armoniac fteeped in urine till foft, then fmeared over the fkin; which is to be dried in the fhade. Sky-colvur is given with indigo fleeped in boiling water, and the next morning warmed and fmeared over the Rkin. Yellow, by fmearing the fkin over with aloes and linfeed-oil diffolved and frained; or by infufing it in weld. Orante-colour is given by fmearing with fultic berries boiled in alum-water; or, for a deep orange, with turmeric.

Proceffes for Dyeing Leather Red and Yellow as pragifed in Turkey, zuith directions for Preparing and Tanning the SLins; as communicated by MIr Plitippo, a native of Armenia, subo received from the Sucity for the Entouragemernt of Arts. E*c. one hundred pounds, and at. fo the gold medal of the Society, as a reevard for difcovering this fecret.

1. Firf Preparation of the Skins, both for Red and Tollaru Leather, by dreffring them in Lime. Let the fkins, dried with the hair on, be firft laid to foak in clean water for three days; let them then be broken over the flefh-fide, put into frefh water for two days longer, and afterwards hung up to drain half an hour. Let them now be broken on the flefh-fide, limed in cold lime on the fame fide. and doubled together with the grain fide outward. In this flate they muft be hung up within doors over a franse for five or fix days, till the lair be loofe; which mult then be taken off, and the finins returned into the lime-pit for about three weeks. Take them rut, and let them be well worked fleth and grain, every fixth or feventh day duting that time: after which, let them be wafhed ten times in clear water, changing the water at each wafhing. They are next to be prepared in drench, as below mentioned.
2. Second Preparation of the Skins for loth the Red and Cellow Dyes by drencling. After fqueezing the water out of the fins, put them into a mixture of bran and water, warm as new milk, in the following pro. portions; viz. about three pourds of bran for five
rist and water fufficient to make the mixture mode. Leather. rately fluid, which will be about a gallon to each pound of bran. In this drench let the fkins lie three days ; at the end of which time they mult be well worked, and afterwards returned into the drench two days longer. They mull then be taken out and rubbed between the hands; the water fqueezed from them, and the bran fcraped off clear from both fides of the fkins. After this they mulf be again walled ten times in clear water, and the water fqueezed out of them.

Thus far the preparatory procefs of all the flins, whether intended to be dyed red or yellow, is the fame; but afterwards thofe which are to be dyed red, mult be tieated as follows.
3. Preparation in Honey and Bran of the Skins that are to be dyed Red. Mix one pound of honey with three pints of luke warm water, and fir them together till the honey is diffolved. Then add two double handfuls of bran; and taking four 1 kins (for which the above quantity of the mixture will be fufficient) work them well in it one after another. Afterwards fold up each fkin feparately into a round form, with the flefhfide inwards; and lay them in an earihen pan, or other proper veffel; if in the fummer, by the fide of each other; but in the winter, on the top of each other. Place the veffel in a floping pofition, fo that fuch part of the fluid as may fontaneoufly drain from the fkins, may pafs from them. An acidfermentation will then sife in the liquor, and the fkins will fwell confiderably. In this flate they mult continue for feven or eight days; but the moifure that drains from them mult be poured off, once or twice a-day, as occation may require. After this a further preparation in falt is neceffary; and wbich mult be performed in the following manner.
4. Preparation in Salt, of the Skins to be dyed Red. After the flins have been fernented in the honey and bran, as above mentioned, let them be taken out of that mixture on the cighth or ninth day, and well rubbed with dry common fea-falt, in the proportion of about half a pound to each fikin; the falt muft be well rubbed and worked with them. This wili make them contract again, and part with a further confiderable quantity of moillure; which nuft be fqueezed out by drawing each fkin feparately througli the hands. They muft next be fcraped clean on both fides from the bran, fuperfurous falt, and moilture that may adhere to thein. After which, dry falt mult be Atrewed over the grainfide, and well rubbed in with the hand. They are then to be doubled with the flefh fide outwards, lengthwife from neek to tail, and a little more dry falt mult be thinly ftrewed over the flefh-fide, and rubbed in ; for the two laft operations, about a pound and a half of falt will be fufficient for each fkin. They muft there be put, thus folded on each other, between two clean bodrds, placed floping, bleadthwife; and a heavy weight laid on the upper board, in order gradually to prefs out what moilture they will thus part with. In this flaie of preffure, they mult be continued two days orlonger, till it is cunvenient to dye them, for which they will then be duly prepared.
5. Prcparation of ibe Red Dye, in a proper propor:ion for four frins. Put eight gallons of water into a
1.eather. copper, with feven ounces of thenan (A) tied up in a linen bag. Light a fire under a copper; and when the water has boiled about a quater of an hour, take out the bag of thenan, and put into the boiling fluid or lisivium, ift, two drams of alum; 2dly, two drams pomegranate bark; 3 dly, three quarters of an ounce of turmeric; 4 thly, three ounces of coehineal ; 5 thly, $t$ wo ounces of loaf. fugar. Let the whole mixture boil abour fix minutes, then cover the fire, and take out a quart of liquer, putting it into a flat earthen pan; and when it is as cold as new milk, take one fkin, folded length. wife, the grain fide outwards, and dip it in the liquor, rubbing it gently with the hands. Then taking out the Riu, hang it up to drain, and throw away the fuperfluous dye. Proceed in the fame manner with the remaining thee fkins; repeating the operation of each frin feparately, eight times, fqueezing the fins by drawing them through the hands before each fref dipping. Lay them now on one fide of a large pan, fet floping, to drain off as much of the moifture as will run from them without preflure, for about two hours, or till they are cold; then tan them as below directed.
6. Tanning the Red Skins. Powder four ounces of the beft white galls in a marble mortar, fifting it thro' a fine fieve. Mix the powder with about three quarts of water, and work the fins well in this mixture for half an hour or more, folding up the Skins four-fold. Let them lie in this $\tan$ for 24 hours; when they muit be worked again as before; then taken out, fcraped clean on both fides from the firlt galls, and put into a like quantity of frefh galls and water. In this fref mixture they mutt be again well worked for three quarters of an hour ; thén folded up as before, and left in the frem tan for three days. On the fourth day they mult be taken out, walled clean from the galls in feven or cight frefh quantities of water, and then hung up to dry.
7. Manner of Drell.ug the Skins after they are tanned. When the kins have been treated as above, and are very near dry, they fhould be fcraped with the proper inltrument or feraper on the fefh-fide, to reduce them to a proper degree of thicknefs. They are then to be laid on a fmooth board, and glazed by rubbing them with a fmooth glafs. A fier which they mult be oiled, by rubbing them with olive-oil, by means of a linen rag, in the proportion of one ounce and a half of oil for four kins: they are then to be grained on a grain-ing-board, lengthwife, breadthwife, and cornerwife, or from comer to corner.
8. Preparations with Galls, for the Slins to be dyed

Tellows. After the four Alins are taken out of the drench of bran, and clean wafhed as before directed in the fecond article, they mult be very will worked, half an hour or more, in a mixture of a pound and an half of the beft white gralls, finely powdered, with two quarts of clean water. The fkins are then to be feparately doubled lengthwife, rolled up with the flefh. fide outwards, laid in the mixture, and clofe preffed down on each other, in which ftate they muft continue two whole days. On the third day let them be again worked in the tan; and afterwards feraped clean from the galls, with an ivory or brafs inltrument (for no iron mult touch them). They mult then be put into a frefh tan, made of two pounds of galls finely powdered, with about three quarts of water, and well worked therein 15 times. After this they maft be doubled, rolled up as before, and laid in the fecond tan for three days. On the third day a quarter of a pound of white feafalt muft be worked into each ginin; and the fkins doubled up as before, and returned into the tan, till the day following, when they are to be taken out, and well wathed fix times in cold water, and four times in water lukewarm. 'The water mult be then well fqucezed out, by laying the fkins under preffure, for about half an hour, between two boards, with a weight of ahout 200 or 300 pounds laid upon the uppermoft buard, when they will be ready for the dye.
9. Preparation of the Fillow Dyc, in the proper pro. portion for four Skims. Mix fix ounces of caffiari gehira (B), or dgehira, or the berries of the eattern rhamnus, with the fame quantity of alum; and pound them together till they be fine, in a marble or brafs mortar, with a brafs peftle. Then dividing the materials, thus powdered, into three equal parts of four ounces each, put one of thole three parts into about a pint and a half of water, in a china or earthen veffel, and flir the mixture together. Let the fluid fland to cool, till it will not feald the hand. Then fpreading one of the 凡ins flat on a table, in a warm room, with. the grain-fide uppermoft, pour a fourth part of the tinging liquor, prepared as above directed, over the upper or grain-fide, fpreading it equally over the 凤in with the hand, and rubbing it well in. Afterwards do the like with the other three fkins, for which the mix. ture firft made will be fufficient.

This operation mult be repeated twice more on each nin feparately, with the remaining eight ounces of the powder of the berrics, and alum, with the above mentioned due propurtions of hot water, put to them as before directed.

The
(A) Shenan is a drug much ufed by dyers in the Ealt; and may eafily be procured at any of the ports of Syria and Africa, in the Levant. It is the Eaftern jointed-kali, called by botanifts folicornia, and grows in great plenty in thofe and other parts of the Eaft. There is a leffer fpecies of the falicorvia on our coalt, which, from its great affinity with the Chenan, might be prefumed to have the fame qualities. On- fome trials, however, it has not appeared to anfiver the intention of the flenan; but it will not be pradent to purfue the examination of this further, as fome unknown circumblances in the collecting or ufing the Englifh falicorniz might occafion the mifcariagge. But be this as it may, the Eaftern henan may, at all events, be eafily procured in any quantity, at a vety trifing expence, by any of the captains of Turkey hips, at Aleppo, Smyrna, \&c.
(B) The caffiari gehira is the berries of an eaftern rhamnus, or buckthorn tree; and may be had at Aleppo, and other parts of the Levant, at a fmall price. The common Avignon or yellow berries may be fubitituted, but not with fo good an effet ; the caffiati gehira being a Aronger and brighter ytllow dye, both for this uft and alfo that of colouring paper-hangings, \&c.

## L E A L 75I J L E C

The flins, when dyed, arc to oe hung up on a wooden frame, without being folded, with the grain. fide outwards, about three quarters of an hour to drain; when they muft be carried to a river or fream of running water, and well wafhed therein fix times or more. After this they mult be put under prefure for about an hour, till the water be well fqueezed out; afterwards the fkins mutt be hung up to dry in a warm room.

This being done, the Rkins are to be dreffed and grained as before directed for thofe dyed red ; except the oiling, which muft be omitted.

Blacking Leather. In the tanning of leather it is fo much impregnated with the aftringent parts of oak-bark, or with that matter whicla Arikes a black with green vitriol, that rubbing it over three or four times with a folution of the vitriol, or with a folution of iron made in vegetable acids, is fufficient for ftaining it black. Of this we may be conoinced by dropping a little of the folution on the unblacked fide of conmon thoe-leather. This operation is performed by the currier; who, after the colouring, gives a glofs to the leather with a folution of gum-arabic and fize made in vinegar. Where the previous aftringent impregnation is infufficient to give due colour, and for thofe forts of leather which have not been tanned, fome galls or otber aftringents are added to the folution of iron; and in many cafes, particularly for the finer forts of leather, and for renewing the blacknefs, ivory or lampblack are ufed. A mixture of either of thefe with linfeed oil makes the common oil-blacking. For a hining l.lacking, fmall beer or water are taken inftead of oil, in the quantity of about a pint to an ounce of the ivory-black, with the addition of half an ounce of hrown fugar and as much gum-arabic. The white of an egg, fubitituted for the gum, makes the black more fhining, but is fuppofed to hurt the leather, and make it apt to crack. It mme be obvious, however, that all thefe compofitions admit of a great many variations.

Gilding of Lefather. Take glair of the whites of eggs, or gum water, and with a brufh rub over the leather with either of them : then lay on the gold or filver, and, letting them dry, burnifh them. See the articles Giloing and Burnishing.
To drefs or cover Lesther with Silver or Gold. Take brown-red; grind or move it on a ftone with a muller, adding water and chalk; and when the latter is diffolved, rub or lightly daub the leacher over with it, till it looks a little whitifh; and then lay on the leatfilver or gold before the leather is quite dry, laying the leaves a little over each other, that there may not be the leaft part uncovered; and when they have well clofed with the leather, and are fufficiently dried on and hardened, rub them over with an ivory polifher, or the furetoath of a horfe.
LEAVEN, a pirce of four dough, ufed to ferment and render light a much larger quantioy of dough or pafte. Sce Bread. Barm, and Baksig.

Leaven was Atrictly forbidden by the law of Mofes during the feven days of the paffover; and the Jews, in obedience to this law, very carefully purified their houfes from all leaven as fron as the vigil of the feaft began. Nothing of honey or leaven was to have place in any thing prefented to the Lord, upon his altar, during this fulemity. If, during the frat, the leaft
particle of leaven was found in their houfes, they imagined the whole was palluted, for a little leaven leaveaeth the whole lump. Leaven, in its figurative Senfe, fignifies the bad paffions of envy and malice, and rancour, which four the temper, and extend their ftrment over the focial affections; whereas unleavened bread implies fincerity and truth. It is frequently ufed for any kind of moral contagion.

LeAVES of plants. See Lefaf.
Colours extrated from Leaves. Sce Colour-Maling, $n^{\circ} 37$.

LEBADEA, or Leradia, an ancient town of Brentia, on the burders of Phocis, lituated between Helicon and Chæronea, near Coronæa. In it food the oracle of Jupiter Trophonius, which whover went to confult, deficended into a fubterraneous gulf.
1.EBEDA, an ancient fea-port town of Africa, in the kingdom of Tripoii, with a pretty good barbour, and an old cafle, ieated on the Mediterranean Sea ; in E.. Long. 14. 50. N. Lat 32. 10.

LEBLDOSS, reckoned anong the twelve ancient cities of Ionia, was fituated to the fouth of Sinyrna. It was the relidence of ftage-players, and the place where they met from all parts of Ionia, as far as the Hellefpont, and celebrated annual games in honour of Bacchus, (Strabo). It was overthrown by Lyfimachus, who removed the inhabitants to Ephefus ; fcarce ever after recovering itfelf, and becoming rather a village than a town, (Horace.)

LEBEN, or Lebena, (anc. geog.) one of the port-towns of the Gortynians, near the promontory Leon, on the fouth eall fide of Crete; famous for a temple of Nefculapius in imitation of that of Cyrenaica.

LEBRIXA, an ancient, Ittong, and pleafant town of Spain, in Andalufia; feated on a territory abounding in corn, wine, and a great number of olive trees, of whofe fruit they make the beft oil in Spain. W. Lon. 5. 32. N. Lat. 3 6. 52.

LEBUS, a town of Germany, in the circle of Up. per Saxony, and in the marquifate of Brandenburg, with a bithop's fee, fecularized in favour of the houfe of Brandenburg. It is feated on the river Oder, in E. Long. ${ }^{14}$-55. N. Lat. 52. 28.

LECCE, a rich, populous, and noot beautiful town of taly, in the kingdom of Naples and in the Terra d'Otranto, of which it is the chief place, and the fee of a bifhop. E. Long. 18. 20. N. Lat. +o. $3^{8 .}$

LECCO, a town of Italy, in the ducliy of Milan, feated on the eattern fide of the lake Como. E. Long. 9. 40. N. Lat. $45 \cdot 45$.
I.ECHLADE, a town of Gloucefterfire in England, feated at the confluence of the river Lech with the Thames. W. Long. 2. 15. N. Lat. 51. $4^{2}$.
I. ECHNICH, a town of Germany in the circle of the Lower Rhine, and in the electorate of Cologne. E. Long. 6. 35. N. Lat. 50. 40.

LECTI, beds or couches, were of two kinds amonglt the Romana, as being dellined to two different ufes, to lie upon at entertainments, and to repore upon for nightly rett. The firft were called leati triclinuiares, the other legi cubicularii. See Beds.
LECIICA, was a litter or velicle, in which the Romans were carried. It was of two kinds, covered and uncovered. The covered lectica is called by Pli-
or confent of rectors of churches, \&c. though with the leave and approbation of the bifhop; fuch as that of Lady Moyer's at St Paul's. But the lecturer is not intitled to the pulpit, without the confent of the rector or vicar, who is poffeffed of the frechold of the church.

LEDA, (fab. hilt.) a daughter of king Thefpius and Eurythemis, who married Tyndarus king of Sparta. She was feen bathing in the river Eurotas by Jupiter, when the was fome few days advanced in her pregnancy, and the god, ftruck with her beauty, refolved to deceive her. He perfuaded Venus to change herfeif into an eagle, while he affumed the form of a fwan, and after this metamorphofis Jupiter, as if fearful of the tyrannical cruelty of the bird of prey, fled through the air into the arms of Leda, who willingly Theltered the trembling fwan from the affaults of his fuperior enemy. The careffes with which the naked Leda received the fwan, enabled Jupiter to avail himfelf of his lituation, and nine months after this adventure the wife of Tyndarus brought forth two eggs, of one of which fprung Pollux and Helena, and of the other Caftor and Clytemneftra. The two former were deemed the offspring of Jupiter, and the others claimed Tyndarus for their father. Some mythologitts attribute this amour to Nemefis and not to Leda; and they farther mention, that Leda was entrutted with the education of the children which fprung from the eggs brought forth by Nemefis. To reconcile this diverfity of opinions, others maintain that Leda received the name of Nemefis after death. Homer and Hefiod make no mention of the metamorphofis of Jupiter into a fiwan, whence fome have imagined that the fable was unknown to thefe two ancient poets, and probably invented fince their age.

LEDBURY, a town of Herefordhhire in England. It is a well-built town feated on a rich clay foil, and inhabited moftly by clothiers, who carry on a pretty large trade. W. Long. 2. 27. N. Lat. 52.6.

LEDESMA, an ancient and Atrong town of Spain, in the kingdom of Leon, feated on the river Tome, in W. Long. 5. 25. N. Lat. 47.2.

LEDGER, the principal book wherein merchants enter their accounts. See Book-keping.

LEDUM, marsh cistus, or Wild Rofemary: A genus of the monogynia order, belonging to the decandria c!afs of plants; and in the natural method ranking under the 18 th order, Bicornes. The calyx is quinquefid; the corolla plain and quinquepartite; the capfule quinquelocular, and opening at the bafe. There is but one \{pecies, viz. the paluitre, with very narrow leaves. This grows naturally upon bogs and moffes in many parts of Yorkfhire, Chethire, and Lancafhire; rifing with a flender flrubby flalk about two feet high, dividing into many flender branches, garnifhed with narrow leaves, not much unlike thofe of heath. The flowers are prnduced in fmall clufters at the end of the branches, and are flaped like thofe of the flrawberrytree, but Ipread open wider at top. Thele are of a reddifh colour, and in the natural places of their growth are fucceeded by feed-veffels filled with fmall feeds which ripen in autumn.-This plant is with great difficulty kept in a garden; for as it naturally grows upon bogs, unlefs the plants have a fimilar foil they will not thrive. They muft be procured from the places of $\mathrm{N}^{\circ}{ }^{179}$.

## L E E [ 753 ] I E E

## L E E [ 754 ] L E E

the gentiernan would not part with it. A copy of this bond is very well attefled to have been among the family papers, but fuppofed to have been fpoiled, along with many more valuable ones, about 50 years ago, by rain getting into the charter room, during a long misority, and no ?amily reliding at Lee.

The mof remarkable cure performed upon any perfon, was that of Lady Baird of Sauchtonhall, near Edinburgh; who having been bit by a mad dor, was come the length of a hydrophobia; upon which, having fent to beg the Lee-penny might be fent to her houfe, the ufed it for fome weeks, drinking and bathing in the water it was dipped in , and was quite recovered. I'his happened above 80 years agn ; but it is very well attelted, having been told by the lady of the then laird of Lee, and who died within thefe thiriy years. She alfo told, that her buband Mr Lockhart, and the, were entertained at Sauchtonhall hy Sir Robert Baird and his lady, for feveral days, in the moit fumptuous manner, on acceunt of the lady's recovery, and in gratitude for the loan of the Lee penny fo long, as it was never allowed to be carried away from the houle of Lee.
N.B. It was tried by a lapidary, and foun' to be a ftone; but of what kind he could not tell.
L.EECH, in ronlogy. See Hirudo.

Leeches in a thip, the borders or edges of a fail which are either floping or perpendicular.

The leceches of all fails whofe tops and bottoms are parallel to the deck, or at right angles to the malt, are denominated from the fhip's lide, and the fail to which they belong; as the farbaard-leech of the main. fail, the lee-leech of the fore-top-fail, \&c. But the fails which are fixed obliquely on the matts tave their leeches named from their fituation with refpect to the thip's length; as the fore-leech of the mizen, the afierleech of the jib or fore-Alay fail, \&c.

LEECA-Lines, certain rotes faltened to the middle of the leeches of the main-fail and fore-fail, and communicating with blocks under the oppufite fides of the top, whence they pafs downwards to the deck, ferving to trufs up thofe fails to the yard as occafion re. quires. See Brails.
 rope to which the border or flait of a fail is fewed. In all. fails whofe oppofite leeches are of the fame length, it is terminated above the earing, and below the clue. See Bolt-Rope, Clue, and Earing.

LEEDS, a town of che Weft Riding of Yorkfhire, 196 miles from London, has a magnificent fone-bridge over the river Aire to the fuburbs. It sas incorpurated by King Charles I. with a chief alderman, nine burgeffes, and 20 affitants; and by Charles II. with a mayor, 12 aldermen, and 24 affiftants. It has been a long time famous for the woollen manufacture, and is one of the largeft and molt flourifhing towns in the county, yet had but one church till the reign of Charles 1. By the late inland navigation, it has communication with the rivers Merfey, Dee, Ribble, Oufe, Trent, Darwent, Severn, Humber, Tbames, Avon, \&c. which navigation, including its windings, extends above 500 miles in the counties of Lincoln, Nottingham, Lancafter, Weftmoreland, Chefter, Stafford, Warwick, Leicefter, Oxford, Worcefter, \&c. Here is a long freet full of flops, and a hall for the
rale of cloth, built in 1758. The merchants of this place, York, and Hull, thip them off at the latter, for Holland, Hamburch, and the north. A fier ringing of the market-bell at fix or feven in the morning, the chapmen come and match their patterns, when they treat for the cluth with a whifper, becaufe the clothiers ftandings are fo near each o:her; and per. haps 20,0001 . worth of cluth is fold in an tour's time. At half an hour after eight the bell rings again, when the cluthiers make room for the linen-drapers, hardware-men, fhoemakers, fruterers, Sic. At the fame tinie the nambles are well fored with all forts of fifh and fefly; and 500 horfe loads of auples have been counted here in a day. There is a magnilicent hall, where they alfo fell great quantities of white cloth; and here is a noble guildhall, with a fine marble ftatue of Queen Anne, erected about the yea: ITit. Its river being navigable by boats, they fend other goods, befides their cloth, to Wakefield, York, and Hull, and furnih York with coals. There is a hemfe called Red-ball, becanfe it was the firft brick-building in the town, and k . Charles I. had an apartment in it, which is ever fince called the King's chamber. Thicre is another place called Tower-lill, on which there was once a tower; befides which, there was a cafle which King Stephen belieged in his march to Scotland. Here was alfo a park, where are now inclofures. There is a workhonfe here of free-flone, where poor children are taught to mix wool, and perform other eafy branches of that manufacture, and a part of it: has been ufed many years as as hofpital for the reception of the aged poor. Here are three alins-houfes, and two charity- Schools of hlue.coat buys to the number of 100 . In the cieling of St Peter's, its only parnchial church, the delivery of the law to Mofes is finely painted in frefco by Parmentier. It is a venerable free ftone pile buitt in the cathedral fafion, and feems to have been the patch-work of feveral ages. 'The increafe of building in Leeds in the ycar 1786, was nearly 400 houfes. 'There is a Prebyterian meetinghoufe here, erected in 1691 , called the nezu clapet, which is the ftatelief, if not the oldeft, of that denomination in the north of England; and in the town and its fuburbs are feveral other meeting houfes, as is always obfervable in towns of great trade and manufacture. It is noted for fome medicinal fprings; one of which, called St Peter's, is an extreme cold one, and has been very beneficial in rheumatifms, rickits, \&ce. Here is an hoipital for relief of the poor, who had been honeft and induftrious, encowed with 8ol. ayear, befides 101 . a-year for a matter to read prayers and inftruet them; alfo a free fchool. Its markets are Tuefdays and Saturdays, and the market-laws are more Aricily obferved here than any where. It has two fairs in the year. Leeds, though a large town, fends no members to parliament.

## LEEK, in botany. See Allium.

Leek, a town of Staffordhire in England, $155^{\circ}$ miles from London. It lies among the barren moorlands, has a manufacture of buttons, a market on Wednefday, and 7 fairs in the year. In the churchyard, at the fonth ealt. corner of the chancel, are the remains of a Danifh crols, now upright, and so fect high from the ground, beneath which are three fteps. In Blue-hills in the neighbourhood are coal-mines;

## L E E [. 755 〕 I I G

and a falt fream comes from thence, which tinges the flones and earth ihrough which it ruus with a rulty colour, and, with the infufion of gralls, turns as black as ink. Here are rocks of a molt furprifing height, witbout any turf or mould upon them.

LEER, in glafs-making, a fort of third furnace, intended to anneal and cool by proper degrees the veflels when made. This properly comprehends two parts, the tower and leer. 'Ihe tower is that part which lies directly above the melting-furnace, with a partition between them of a foot thick, in the midt whereof there is a round hole, placed exactly over the funace, through which the flame and heat pafs into the tower : on the floor of this tower the veffels are fet to anneal. There are two openings by which the veffels are put iato this tower; and after handing there fome time they are put into iron frans, which by degrees are drawn out all along that part of this furnace, which is properly called the leer; which is five or fix yards long, that the veffels may cool by degrees. This leer is continued to its tower and arched all along, and is about four feet wide, and high within. The glaffes are cool by that time they are come to the mouth of this, which enters into a room whcre the glaffes are placed when taken out.

LEES, the groffelt and moff ponderous parts of liquors, which, being feparated by fermentation, fall to the buttom. The word comes from the Firench lie; and that either from limas "mud," or from Lycus one of the furnames of Bacchus; or, according to du Cange, from lic, a corrupt Latin word lignifying the fane. - The vinegar-makers make a great trade of the lees of wine dried and made into cakea, after having rqueezed ont the remains of the liquor in preffes.

LEET, or court lfet (lefa vifus franci plegii), is a court of record, ordained for punifhing offences againft the crown; and is faid to be the moft ancient court of the land. It inquires of all offences under high treafon; but thofe who are to be punifhed with Iofs of life or member, are only inquirable and prefentable here, and to be certified over to the juftices of affife, (Stat.1. Edw. III.). And this court is called the view "f frank pledge, hecaule the king is to be there certified by the view of the fleward, how many peopie are within every leet, and have an account of their good manners and government; and every perfon of the age of $12 y$ ears, who hath remained lice for a year and a day, may be fworn to be faithful to the king, and the people are to be kept in jeace, \&ec. A leet is incideut to a hundred, as a conrt baron to a manor: for by grant of a hundred, a leet paffeth; and a lun-. dred cannot be without a leet.-The rfual method of punifument in the court-lect, is by fine and amercement ; the former affeffed by the lleward, and the latter by the jury.

LEEUW (Wiiliam de), an eminent engraver of the lat century. He was a native of Flanders, and the difciple of Soutman, whofe manner of engraving, or rather etcling, he imitated. His prints generally appear harfl at firt fight; but grow into favour upon eximination, and feveral of them have great effect; particularly his Daniel in the lion's den, a large plate lengthwife, from Rubens. The firt impreffions of this plate are before the name of Dankertz was acied, and are now extremely rare and dcar.

IVERIDARD Ship, a veffel that falls much to leeward of her courre, when failing clufe-hauled, and confequently lofes much ground.

To LEEEVAKD, towards that part of the horizon which lice nnder the lee, or whither the vind bloweth. 'Ihus, "We faw a neet under the lee," and, "We faw a fleet to leezuard," are fynonymous expreffions.
L.EG, in anatomy, the whole lower extremity from the acctabula of the offa innominata, commonly divided into three parts, viz. the thigh, the lery properly fo called, and the foot. See Anatom:, n. 60.
I. EGACl, in Scots law, a donation by one perfon to another, to be paid by the giver's executor after his death. See Leaw, noclxyxi, 3 .

LEGATE, a cardinal or bihop, whom the pope fends as his ambaffador to fovereign_princes. See Am . bassador.

There are three kinds of legates, viz. legates $a$ latere, legates de latere, and legates by office, or legati nati: of thefe the molt confiderable are the legates a latere, the next are the legates do latere. See the article Latere.

Legates by office are thofe who have not any particular legation given them; but who, by virtue of their dignity and rank in the church, become legates: fuch are the archbifhop of Rheims and Arles: but the authorit. of thele legates is much inferior to that of the legates a latere.

The power of a legate is fometimes given without the title. Some of the nuncios are inverted with it. It was one of the ecclefialtical privileges of England from the Norman conquelt, that no foreign legate fhould be obtruded upon the Englifh, unlefs the king fhould defire it upon fome extraordinary emergency, as when a cafe was too dificult for the Englifh pre. lates to determine.

The term legate comes from legatus, which Varro derives from legere, " to choole;" and others from le. gare, delegare, "t to fend, delegate."

Court of the LEGATE, was a court obtained by Cars dinal Woolfey of Pope Leo X. in the ninth year of Henry V11I. wherein he, as legate of the pope, had power to prove wills, and difpenfe with offences agrainft the fpiritual laws, \&c. It was but of flort con. linuance.
I.EGATEE, in Scots law, the perfon to whom a legacy is provided.
L.EGATIO libera, was a privilerre frequently obtained of the ftatc, by fenators of Rome, for going into any province or country, upon their own private bufinefs, in the quality of lesati or envoys from the fenate, that the dignity of this nominal office might fecure them a good seception, and have an influence on the management of their conccrns. The cities and towns through which they palted were obliged to defray their expences.-This was called libera legatio, becaufe they miglit lay afide the offize as foon as they pieafed, and were not encumbered with any actual truft.
L.EGATUS, a military officer amongt the Romans, who commanded as deputy of the commander in chicf. The legati, at their firlt inftitution, were not fo much to command as to advife. They were generall $\delta$ chofen by the confuls, with the approbation of ${ }_{5} \mathrm{C} 2$

## L E G [ $\left.75^{6}\right] \quad$ L E G

segend. the fenate. As to the number of the legati, we have no certain infurmation, though we may upon good grounds affign one to every legion. In the abfence of conful or proconful, they had the lonour to ufe the fafces.

Under the emperors there were two forts of legati, confllares, and pretorii. The firft commanded whole armies, as the emperors lieutenant-generals; and the other had the command of particular legions.

The legati under the proconfuls in the provinces, ferved for judging inferior caufes, and management of fmaller concerns, remitting things of great moment to the governor or prefident himfelf. This was the original office of the legati, as was hinted above; though, as we have feen, they were afterwards admitted to command in the army.

LEGEND, any idle or ridiculous ftory told by the Romanilts concerning their faints, and other perfons, in order to fupport the credit of their religion.

The legend was originally a book ufed in the old Ronifh churches, containing the leffons to be read at divine fervice; hence the lives of the faints and martyrs came to be called legends, becaufe chapters were read out of them at matins, and at the refectories of religious houfes. Among thefe the golden legend, which is a collection of the lives of the faints, was received in the church with great applaufe, w..ich it maintained for 200 years; though it is fo full of ridiculous and romantic flories, that the Romanifts themfelves are now afhamed of it.

Legend is alfo ufed by authors to fignify the words orlettersengraven about the margins, \&c. of coins. Thus the legend of a French crown is, sit nomen domini benedictrm; that of a moidore, in hoc signo vinces: on thofe of the laft emperors of Conflantinople, we find

IESVS CHRISTVS BASILEVS BASILEON, IHS XPS NIKA, Legend, IESVS CHRISTVS VINCIT.

LEGEND is alfo applicd to the infeription of medals, which ferves to explain the figures or devices reprefented on them. In ftrictnefs, the legend differs from the infcription; this laft properly fignifying words placed on the reverfe of a medal, in lieu of figures.

It feems as if the ancients had interided their medals thould ferve both as images and as emblems; the furmer for the common people, and the other for perfors of talle and parts; the images to reprefent the faces of princes; emblems their virtues and great actions; fo that the legend is to be looked on as the foul of the medal, and the figures as the body.

Every medal has properly two legends; that on the front, and that on the reverfe. The firf generally ferves only to diftinguifh the perfon by his name, titles, offices, \&c. the latter is intended to exprefs his noble and virtuous fentiments, his good deeds, and the advantages the public has reaped by him. This, however, does not hold univerfally; for fometimes we find the titles fhared between buth fides, and fometimes alfo the legend.

In the medals of cities and provinces, as the head is ufually the genius of the place, or at lealt fome deity adored there, the legend is the name of the city, province, or deity, or of both together; and the reverfe is fome fymbol of the city, \&c. frequently without a legend, fometimes with that of one of its magiftrates.

Legends generally commemorate the virtues of princes, their honour and confecrations, fignal events, public monuments, deities, vows, privileges, \&c. which are either in Latin or Greek, or a mixture of both, and are intended to eternize their names, and the benefits done by them to the empire.

## L E G E R D E M A I N,

## Or Sleight of Hand;

ADENOMINATION given to certain deceptive performances, which either depend altogether on dexterity and addrefs, or derive but a fmall degree of aid from philofophical principles. Of thefe we fhall prefent our readers with a felection of the beft that have been cither explained in books or publicly exhibited.

## Sect. I. Performances with Cups and Balls.

 eacions.The following method of exercifing this fimple and ingenious amufement is that practifed by one Mr Kopp a German, whofe performances are defervedly preferred to thofe of former artitts. In this, however, as in all the other branches belonging to the art of legerdemain, it is not fufficient that a perfon lias the requifite dexterity, or fleight of hand; it is neceffary alfo to take off the attention of the fpectators by fome entertaining difcourfe ; which not only prevents difcovery, but adds greatly to the amufement of the company; for which reafon, fuch difcourfe is inferted in this article.

To play his part properly, the performer on cups and balls ought to provide himfelf with a bag about 12 inches long, and from eight to ten in depth. The infide mult be furnifhed with a number of pockets for holding the feveral articles neceffary in the amulement ; and this bag the performer mult hang before him.

The materials neceffary for the performer are,

1. Three white polifhed tin-cups, reprefented by $A, B$, and $C$ (tig. 1.) in the thape of a truncated cone with a double ledge $\mathbf{D}$ towards the bafe. This ledge, which is about half an inch in breadtl, ferves to raife the cups eafily by, admitting alfo the hand to pars a fmall cork-ball (fee fig. 5.) The upper part E of the cup ougbt to be hollowed in the form of a fphere, fufficient to contain the balls without their appearing above the upper edge of the cups.
2. It isalfo neceffary to have a fmall rod, called 76 cob's faff; which is ufually made of cbony, and neatly tipt with ivory at both ends. This is frequently ufed for ftriking on the cupz; and being held in the hand where the balls are alifo kept, it gives the operator 22
opportunity of keeping that land generally fhut, or of varying its pofition, in order to avoid being difcovered. The balls are made of cork, blackened by night burning on the outfide.

The dexterity in performing this eperation confifts in artfully fecreting a ball in the right hand, and making it to appear or difappear in the fame hand. The fecreting it between the fingers is called conjuring the ball, at which time the fpectators are to fuppofe that it is kept in the other hand, or that it was paffied under a cup; but if it is made to reappear when held fecretly in the hand, they muft believe that it came out of the place laft touched by the fingers.

Corijuring the ball is performed by putting it between the place of the thumb $A$ and the finger $B$ (fig. 2.), conveying it with the thumb, by rolling it upon the fingers the length of the line BC, moving the middle finger $D$ to a diftance, and placing the ball at the junction of the fingers C (fig. 3.) ; but in this part of the operation it is neceffary to hold the ball rather tight, left it fhould fall down and diforer the fecret. In order to make it appear, we mult bring back the ball the fame way from C to D; and evcry time that it is conjured, or made to difappear, as well as when it is made to reappear, the palm of the hand fhould be turned frum the fide of the table on which the operator is playing.

While this part of the trick is performing, the operator mult let the fpectators know that the ball has been paffed under a cup, or into another hand; and in the firtt cafe he makes a motion with the hand (as reprefented fig. 4.) indicating that he had thrown it through the cup; at which time alfo he conjures it, approaching the two fingers of the right hand towards the left, which latt he holds open, and makes a motion as if the ball had been placed there, flutting the left hand inflantly. It is alfo to be fuppofed, at every time wheq a ball feems to be placed below a cup, that it has been held in the left hand; and when he raifes the cup with the right hand as in fig. 5. the left hand mult be opened, and he refts the ball at that inflant upon the hollow of the other, niding it along the fingers.

At the time the ball is to be put fecretly under the cup, it thould lie between the two fingers of the right hand (fig. 5.) With this hand he raifes che cup; and placing it on the table, lets go the ball, which, according to its pofition in fig. 6. fhouid be found near the edge of the cup when taken into the hand. If he would put the ball Secretly between the two cups, it mult be let go by jerking it towards the bottom of the cup which he holds, and places it very quickly on that in which the ball is to be found. When the ball is in this fituation, if the operator fhould want it to difappear, he mult raife the two cups with his right hand, and draw out hatily that under which the ball is placed; at the fame inttant lowering with his left hand the other cup, under which he places it.

In 「peaking of the tricks which follow, terms are made ufe of which explain whether what is faid be feigned or true ; of which terms explanations are given, and numbers adapted to the explanations of the different opeations which follow.
I. To put the ball under the cup: Really done, with the fingers of the right or left band.
11. To gut the ball under the cup, or in the hand.-

A feigned conjuration; pretending to flat it up in the left hand, which is afterwards opened, in order to have it fuppofed that the ball is under the cup or elfewhere. Sce fig. 3 .
III. Topafs the ball under the cup.-The ball fuppofed to be conjured is to be really introduced.
IV. To pals the ball between the cups, is likewife real.
V. To make the ball wukich is between the cups difappear. -This is likewife real; anu pertormed, as has already been defcribed, by drawing back with much precipitation and dexterity the cup on which it is placed, and lowering upon the table that which is abose, and under which the ball mult of confequence be found.
VI. To take the ball. Real.-It is iaken between two fingers of the right-hand, and fhown before conjulation.
VII. To take away the ball from under the cuip. This is done by taking it away in the fight of the fpectators.
VIII. To draw the ball. Feigned; or by pretend. ing to draw it from the end of the rod, from the cup, or any other place, by bringing into the fingers the ball which was fecreted.

1X. To throav the ball through the cup, is to conjure it in pretending to throw it.
X. To raife up the cups. This is really done in three ways; viz. either with the right hand, the rod, or the left hand. Thlie firtt is when the ball is to be fecretly inferted in returning the cup to its place. In the fecond, the rod is to be put on the tops of the cups to turn them over again, fo that the balls may be Shown which were to be paffed into them The third is when the operator intends to fhow that no balls are in the cups, or that there are fome.
XI. To cover a cup. This is really done, by taking with the right hand that which is to be put over another, and introducing at the fame time a ball betweea the two.
XII. To recover a cup. It is done by taking with the left hand the cup to be put over or above, without introducing any thing into it.

## The Performances.

1. To put a ball under each cup, and take it out again. Having placed on the table the three cups and little Performa Havis placed ine table ances. rod, as thown in fig. I. the performer mull begin his manœuvres, by endeavouring to amufe the fectators with fome kind of entertaining difcourfe. Nothing can he more a-propos than the origin of the little rod and cups; and he mult be very afliduous in this fort of difcourfe to take off the eyes of the fpectators as much as poffible. The following may be a fpecimen of the manner in which he ought to addrefs his audience: "There are many perfons who meddle with the play of the cups and balls, and yet know nothing about them. This is by no means extraordinary: even I who now play before you, pretend to know but little. Nay, fome time ago, I was fuch a novice as to think of playing before a numerous affembly with glafs cups, in which you may guefs I did not meet with great applaufe. I do not indeed practife this method but be: fore fuch as are actually blind ; neither do I play with China cups, left, through aukwardnefs in feigning to break their handles, I fhould do fo in reality. Thefe are the cups which anfwer my purpofes. They are made of fuch metal as the alchymilts attributed to. Jugite

Jupiter and Mars, or, to fpeak more properly and inrelligibly, they are made of tin. Behold and cxamine thefe cups (floruing the cups to the combany, and futting them on the tuble :) All my feience, and it is in that in which it is admirable, confifts in deceiving the eyes, and pafling the balls into the cups without your perceiving how it is done. I advife you therefore to pay so attention to my words, but to examine well my hands, (Jhooving bis lands). If there is in this company any perfon who has the misfortune to ufe feecta. cles, he may retire; but the most clear-fighted will fee nothing there.
"IFerc is the little Jacob's rod (forouing the rod evith the left band); that is to fay, the magazine from which I take all my balls (taking fecretly weith the other tand a lall from bis bag, whish be bides between bis fingers). There is not one in England fo well furnifhed. Obferse, that the more I take from it the more remain: I draw from it (VIII.) this ball, (Rooving it, and placing it upon the table, (1.) Obferve that there is nothing under the cups (Joozwiag the infole of the enfs), and that I have no wher ball in my hands, (horeving bis bands). I take (VI.) this ball: I put it (II.) under this tirlt cup. I draw (VIII.) a fecond ball from my little rud, and I put it under this fecond cup (ailually done). It is proper here to tell you, that the generality of thofe who play the cups orily feign to put the balls there; but 1 do not deceive you, and I actually put them there. (He raifes the cup $\mathrm{I}_{0}$, and taking the ball which be has put under it into bis right. hand fingers, forows it to the company). I return it (ill) under the fame cup. I take (VIII.) this third, and put it (II.) in the fame way under this laft cup. You are about to fay that this is not very extraordinary, and that you could do it as well yourfelves. I agree with you; but the difficulty confits in taking out thefe balls again through the cups, (Ariking the firf cup with the ral). I take (VIII.) this firtt ball (Jhowing it): I put it (II.) into my hand, and fend it to Conftantimople, (be opens the left band). I take (VIII.) this, (friking quith the roll on the ficond cup). 1 put it (11.) into my hand, and I fend it to the Eaft Indies, (opening bis loft band). I take (VIll.) the laft, and I put it (1.) on the table: Obferve that there are no more under any of thefe cups, (turning dozon the cups wwith the rod).
2. With the fingle hall remaining on the table, to pafs a ball through sach of the cups, and to take il off from the fame. "I return the cups to their places, and take (VI.) this ball, and I put it under this firt cup. I take it back again (TIII.) : oblerve that it is not there now, (raijing (X.) the culp quith the left hand). I put it (II.) under this other cup: I rake it out again (VIII.) in the fame manr.er, (raifing (X.) the cup). I put it (II.) under the lall cup, and take it out again, (VIII.) (rajing the hat cup quith the left hand, and placing the ball on the table).
3. With the fingle ball remaining on the table, to take away a ball through treo or three cups.-In this performance the three cups are diltinguithed by $A, B, C$, as in fig. r.
"I never lave any ball fecreted in my hands, as the greatef part of them who play the cups and balls have (frowing his bakds). I take (VI.) this ball, and

I put it (II.) under this cup B. I cover it (XII.) with this cup C, and I take again (VIII.) this ball thro' the two cups (flows the ball in placing it on the table, returns afiercuards the cup $\mathbf{C}$ to its place, and raifes (X.) the cuf 13 to foow that there is nuthing thre). I take again (VI.) this fame ball. I put it (II.) under the fame cup B: I cover it (XII.) with the two other ctps C and A ; and I take out (VIII.) this ball through the three cups (Boreving it and placing it on the table).
4. With the fingle lall remaining on the talle, to pafs the fame ball from cup to cup.-" I now beg of you to pay every poffible attention, and you will very ditlinitly fee this ball pafs from one cup into the other (putting the cups at a greaier difance from each other). I take (V1.) this ball, and I put it (II.) under the cup C: there is nothing under this cup B (raifing it, introducing the ball, and taking the road in bis band). I command that which I have put under the cup C to pafs under that B. You fee it (moving the end of the rod from one cup to the other, as if he followed the ball): obferve that it is paffed (raifing the cup avith bis left band, and taking the ball with) bis right, fhows it to the company). I return it (11.) under this cup $B$; there is nothing under this A (raifing the cup avilh bis right band, and introclucing the ball there). I am going to pafs it under this lait cup A. Look well; come near; (making as if in Seesing it he zuould fooze with the end of the rod the path that it look). You did not fee it pafs? I am not much furprifed: I did rot fee it myfelf; however, here it is under the cup (raifing the cup A, and placing it on the talle).
5. With the fame dall remaining on the table. The cups being covered, to pafs a ball from one into the other, nuithout rajifng thenn $u p$.-" I was very right in telling you, that the moft clear-fighted would not fee very much; but, for your comfort, here is a trick in which you will fee nothing at all. I take this ball, and put it (II.) under this cup B. I cover it (XI.) with the two other cups (takint one in cach band, and introducing the ball upon the cup B ) : pay attention, that there is abfolutely nothing in my hands (Joowing them). I command this ball to mount up upon the tirt cu? (taking up the two cups, and putting them in thir places, be floows that it has momated). I return (II.) this ball under the fame cup B. I cover it as before (covers it in taking a cup in each hand, and introducing a ball betzeen the fecond and thirit cup.) I take (the only ball with) zubich be plays being under the third cup, be cannut foow it, but nats as if be bad taken it out, and put it into the fingers of his left band, wubich he bolds in the air, in conduaind the bard from one fite to the otber). I take the ball, which is under thefe three cups; and I throw it thro' the firft cup (feigning to throwe $i t$ ): obferve that I have not conjured the batl, having nothing in my hands (floowing them); it is paffed, however, (raifing the for $\boldsymbol{l}$ cup with the left band, putting the ball upon the talle and the cups in their places.)
6. With, the fingle ball remaining on the table, to pafs a ball throught the table and two cups.-" You are undoubtedly fuprifed, that, having but a fingle ball, I have been able, after having fhown it to you, to paifs it under this cup without raifing it ; but let not that aftonifh you: I have fecrets much more wonderful. I
convey, for example, the aceple of one village into another: I have fyunpatheric quadrant;, with which a conrerfation may be held at 200 leagues dillance: I have a flying chatiot which can conduct me to Rome in three days. I will how all thefe curiolities as foon as my machines are entirely completed ; that is to fay, in a few centuries: but to am fle you till the arrival of all the fe prodigies, I now continue the entertainment of the eups and balls. I put (II.) this boll under the cup A. 1 take it away again (VII1.) (Joowing it, and feigning to put it into his left-bant fingers). I cover (X1.) this cup with the two others $\bar{B}$ and $C$ (introtucing the ball between thefe two cups, wfing always the right banch, and fuigning flillto bold it in bis hift), and I pa fo this fame ball through whe table and the two cups (putting the left band under the table.) 'I'liere it is pafled (raifing the firl (up.)
7. With the fame ball. A bell luving been fut un:ter a cup, to take it arvay again, and to pafs it betzuecn two others.-" Herc is again a very pretty tuick: 1 take this ball, and I put it (II.) under this cup A. Obferve, that there is nothiug under the others (Jbowing then and introdacing the tall urder the cup C), nor in my hands: I take this bull, which is under the cup A (feigning to take it out, and ruifing the bottom of the cup fo that the Speritators may not attend to his fintgers). I cover this eup $C$ with the two others $A$ and $B$, and 1 throw it (IX.) through thefe two cups (rifing then, and /Bowing that the balt is palfel there).
8. With this fungle ball aud a billing; to pars a ball from ore hand into ibe other-" I take this ball; I put it (II.) into this hand, and I put into the other the thilling. In which hand do you think the ball is? or in which do you think the failling may be?" (Whatever anfouer the fiectator makes, the performer fiowes him that he is miltalien, and that the qubole is in the right band; arid this trutts ferves as a pretence to take a bull from the leg. in puting the friling buck into it.)

The performer may, however, without breaking the connection of thefe operations, difpenfe with this trick, and feign to drop the ball he plays with, which affords him a pretence for taking another.
9. With the ball renaining on the table, and that whith is fecretly taken out of the bag; to pafs under a cup the tevo balls put urder the others.-The operator goes on with his difeourfe: "In order to give you till farther amufement, I take this ball and cut it in two (taking is in his left band, and holdiag the rod with, his right; foigning to cut it, he puts afterwards the roll on the lable, and brings buck to his fingers ends the ball whici he took' out of the bag). Nothiag is io commodious as to he able in this manner to multiply the balls. When I am in want of money, I cut then again and again, until I may have had five or fix buthels (placing the two talls on the table). Obferve that there is nothiag under this cup A. I put there (II.) this firt bail: there is nothing more under the two other. cups (introdicing the ball uuder the cus B). I take this feeond ball, and $I$ put it (II.) under the cup C: there is now a ball under the fe two cups A and C. I take away (VIII.) from this cup C this ball, and I throw it (IX.) thro' the middle cup B: obferve that it is paffed (rajing the enf. B , and introducing there the fecond ball). I eormmand this, which is under the other cup $A$, to pafs under
the fame cup 13 (raifing this cup, and hoaving that they are both there, and flating them upon the sable).
10. With the two balls which are upon the talle. Truo balls bavins been put under the fome cup, to pafs theme un. der two otbirs.--" When 1 was at collcge, the tutor told me, it was neceffary to know how to do my exercife in two ways. I have juit now paffed thefe two halls intu the middle cup; 1 am now to make them go our ; the one is not nore dificult for me than the other. I take therefore thefe two balls, and place them under this cup B (putting one lall under the cup, and ronjuring the other); oblerve that there is nothing under the cup A , nor maler the oiher C (introducing into this laf the ball that be conjured): I cossmand one of thefe balls, which are under the middle cup, to pals under the one or the other of thefe two cups $A$ and $C$. Behold it already gone (raifing the cup B to foow that there is no more than a fingle ball; and taking, wuith the right band, the ball which is underneati, he jhosus it, and puts it (II.) wutcre the fanie cup B). L.et us fee into which cup it lias paifed (rajing innmediately the cup A , and introducing the ball that be took from the cup B ): here it is under this cup C (rajing the cup; ) I command the other ball t) pafs under this cup A (be raijes it, and /howers that it pafed there)." This trick is frequently doas with three balls, but it appears much more extraordinary with two.
11. With ibefe treo balls, a thied zubicis be hoous, and a fourth fecreted in his bands; to fuls three balls under the fome cus,--" All this is but a trifle; I am going to fllow you ano:her trick with thice balls (taking out of the luyg a thi:d ball, and placing it on the table, fecreting at the jume lime a jourth in his haudt). Obferve that there is rouhing under any of the fe eups (raifing then, and:ntrotucing thene under the cup C). I take this firlt ball, and throw it (IX.) through this cup C. Obferve that it is pafted (raifing (X.) the cup auith the rist hand); I take this fecond bail, and throw it (XI.) throngh the fame cup. There it is paffed (raying (X.) agdin the cup) ; I take the third, and I muke it pals the fame (rajing (X.) the cup, and flowving tosat thefe are fajerd
uader a.l the three).
12. With the three talls romaininner under the cup, aud that he't fecrctly in the band ; to paris two halls from one cap into onother, at the choice of ot perjon, wevithout tonching any of the cups.-" Here is another in which 1 have never been able to comprehend any thing; but it will at onith you much (raifme the cup C , and tuking azway the three balls jrom their places, be puts then under eacts cus, and in raifing the cap. C introducts there the fourth luill quisch, he hetid fecretly in his houn,!). I take this bail (that which is wuller the cup B), and I pat it (II.) under the fame cup. I take this (the ball from the cup A), and I place it (1.) under the fame cup (puting there aifo thon whbich zuts fecreted in bis band) : I take this lath, and I throw it (iX.) through the eup C; and to fhow that I do not deceive you, behold it paffed (rajing (X.) the cupp tbat bas been fived upon, which futpofe to be C, and flowsing thet there are two ). I take again the fe two balls, and pue them under the cup C (putting really lut ane) : obferve that there is no more under this cup B (introdiucing there the ball that be bad juyt taken aseay, and Jbosuing that be bad no other in bis hand) ; I comraand one of thefe balls, whichare ander this cup C ,
th çanijoin that which is under this A. Ohferve that it is paffed. There! (raifrug the cup C , and returning the two lulls under the fame cup, and raifing C , in order to flowe that there is lut a fingle one; and be places it again under the fame cup: be does not raije the cup $B$ under which a lall remnins).
13. With the three lalls that were placed upon cups, and that which renains bidden under the middle cup; to pajs under the fume cup the balls put under the others."I take this ball (that which is upon the cup C), and I put it (IT.) ander the fame cup C ; and I order it to pafs into this cup B: there it is paffed (in raifing this cup be introduces a third ball). I take this third ball, and put it (II.) under this cup C ; and I command it to pafs into the cup $B$ alonge the table, and in the fight of the fpectators (taking the rod in bis ieft bant, feigning to fhore the way that it frafled between the ravo cups). You did not fee it then? Here it is (He draws it (VIII.) from the end of the rod, which appears to fow it). Go quickly (throwing it (IX.) through the cup $B$; and honwing that they are all three there. nnd that there is nothing under the taun oflocrs; placing afterwards three of the balls on the table, and Secreing the fourth in this band).
14. With the three balls remaining upon the tabie. and thant uebich is held fecretly in bis hand. - Multiplication of the balls.

For this trick there muft he a tin vafe (fee fir. 8.), at the bottom of which there mull he contrived a falle bottom $A$, which will fall down at pleafure; that is to fay, in reverfing it upon the table, by means of a fmall trigger placed at the bafe of one of the handles B , introducing previoully between the falfe and true botroms a dozen of balls. The operator goes on with his difcourfe.
" If any of the company believe in witches, I sould give my advice that they fhould believe in them no longer ; as what I am about to do is much more furprifing than the feats of any witch - I put (I.) thefe three balls under the three cups you fee on the table: I take away (VII.) this firlt ball (that wbich is under the cup C), and I put it (II.) into this vafe. I take this, and I alfo put it (II.) into the vafe. I take away (VII.) this third (that which is under the cup A ), and I throw it (II.) the fame way". (Every time that he raifes one of the cups to take azvay the ball, be introduces that which always remains fecreted in bis right hand; and this be repeats, conffantly taking out one ball and putting in another, till be bas introeluced all the ywelze balls; after qubicls be refumes bis difcourfe.) "You imagine, perhaps, that I always make nfe of the fame balls; but, to prove the contrary, here they are, (in. verting the vafe fo as to turn them all owt).

In this trick, if the vafe be well made, the infide may be fhown, and it may even be previounly inverted; in which cafe, it will not be fuppofed that any balls have been put into it.
15. With the three balls remaining under each of the cups, and that which is bidden in his band; to pafs one ball under each of the three cups.
"I put all thefe balls into my pocket. I take (VI.) this (the one fecreted in his hand), and I make it pafs through the table under this firft cup $C$, (conjuring it). I take another from my bag (ßowing the fame ball). I make it pars in the fame manner through
this B, (conjures it asain). I take a third (Dowing fitll the fame), and I make it pafs under this laft cup A (conjuring it). Here are all the three paffed (turning over the cups, and in taking them up again introduces the lall that be has in bis band under the cup B , and futs the three balls apon the three cups.
16. With the three balls put upon each cup, and that which zuas introlluced under the middle cup; to drass tavo balls throught the fane cut.-" There will be wanted now only two balls." Here the operator takes that which is under the cup C, and puts it (II.) into his bag. He takes in the fingers of his right hand the ball which is on the cup $B$, fhowing it ; and with the other covers the cup $B$, with that paffing (IV.) there the ball which he feigned to put into his bag. He then takes the ball which is under the cup $A$. with the right hand; and fhowing a ball in each hand, tells the company that he put them (II.) under the cup $A$; though he actually puts but one, which he holds in his left. He then draws one of thefe balls through the fame cup $A$, fhowing it, and placing it upon the cup $C$. He then raifes the cup $A$, and takes the ball which is under it with his right hand, adding, "There remains but one more." While pronouncing thefe words, he puts it (II.) under the cup. "I takc (adds he) the other ball," (raifing the cup, and florsing that it is there no lonser) ; then, taking one of the two balls which feemed to remain alone, he put it (II.) into his bag, faying, "I return this into my bag."
17. With a ball wbich is bidden under the middle cup, anotber bidden under that which covers it, that which remains in the band, and a fourth which is upon the talle; to pafs the fanue ball fucceflively through the three cups.The preceding trick was only on-purpofe to prepare the fpectators for this; as they now imagine that the performer played only with one ball. He may now addrefs them in the following manner:
"I am now going to make a very pretty trick with this fingle ball. I forgot to fhow it to you at the beginning: I cover (XI.) thefe cups (putting the cup A upon C and B ). I take (VI.) this ball, and I thow it (IX.) through the firt cup;" (raifing (X.) the cup A witls the right band). He then fhows that it is paffed between $C$ and $A$; and, putting it in its place, he introduces there that which he has in his hand. "I take (fays he) (VI.) this fame ball, and I throw it through the other cup C;" and while he fays fo, he raifes (X.) the cup C, fhowing that it has pafled, introducing there that which he has in his land, and putting it in the place of the former. "I take again (continues he) (VI.) this fame ball, and I throw it (IX.) through that lat cup B," (raifing (IX.) the cup B.) During which time he takes away the ball from under it with his left hand, then places it on the table, and returns the cup to its place, introducing there the ball which he has in his left hand.
18. With the three balls which are under the cups, lbat which is on the table, and two which be takes from the tag; to pnfs under a cup the balls put under the two others without raifing thefe laft.-The performer may proceed in his difcourfe in the following manner:
" Let us now return to the order of the entertain. ment which I have interrupted, and continue to play witk three balls." Fie now takes two balls from his bag,
bag, by which means be in fact plays with fix balls, though he pretends to play only with three. Thefe two balls, together with that which remains on the table, he puts on the top of each cup. "I take ( (ays he) (VI.) this ball, (that wobich is on the cup C). I throw it (IX.) through that cup: there it is parfed." He now raifes (X.) the cup, thows it ; and thers has an opportunity of introducing the ball which he has in his hand. "I take (VI.) this (the ball zubich is under the cup. B), and throw it (IX.) through the cup B.". At this he raifes the cup with his left hand, fhowing that it has paffed, and covering it again. "I take again (VIII.) this ball from the fame cup, and throw it (IX) through that C: obferve that it is paffed." Then, raifing up (X.) the cup C, fhowing that there are then two there, he introduces other two which he had in his hand. "I rake (fays he) (IV.) this ball (that which is under the cup A), and Ithrow it (IX) through the fame cup A. There ! it is paffed," (raifing the cup C); after which he fhows the three halls, and introduces there that which was in his hand, putting the three balls upon the table.
19. With the three balls which remain wader the cups, and the three others which remain upon the table; to pafs feparatcly the three balls throush cach cup.-In this maneuvre the performer puts again the three balls which are upon the table upon the top of each cup. He takes that which is on the cup C, and throws it (IX.) through the farne cup; and while he announces this to the company, he raifes (X.) the cup: taking away (VIII.) the ball, fhowing that it has paffed, introducing there that which was in his hand, and putting the fame ball upon the fame cup. He then takes that which is upon the cup B, and throws it (IX.) through the fame cup; fhows that it is pafled, takes it away (VII.), and introduces the ball that was in his hand under this cup, putting it in like namner on the cup. Then he takes the ball which is on the cup A, and throws it (IX.) through the fame cup. A. As he announces its paffage he raifes the cup, taking away (VII.) and mowing the ball; introducing in the fame manner that which was in his hand; putting this firft at the top of the $\operatorname{cup} A$, and then flows that is is not in his hand, and that he has but three balls.

20 Witb the three balls remaining upon the tabie, and thofe zulich are under cach cup. Haning put the balls into the bag, to make them return under the cups.-"I take thefe three halls, and I return them into my bag. (keeping one in bis hand). Behold to what all is reduced that I had to fhow you for your amufement. I did know fome more very pretty tricks, but I have forgot them. (Pretending to mufe for a moment): Ah! I flill remember two or three very plealing ones. Come, my little balls! Return under the cups. (turning over the cuts). See how nimble they are, and obedient at the fame time;" (covering thens again with the cups.)
21. With the three lall's qubich are under the cups, and that in his hand; to pafs the balls through the two cups. -Here the operator begins with taking away (VII.) the ball which is under the cup C ; he covcrs it with the cup B ; and paffes (III.) the other ball which he has in his tight hand between the two cups. He then takes (VI.) the ball which he had in his left hand, Vox. IX. Part II.
and throws it (IX.) between the two cups B and C. In announcing its paffage lie raifes the cup (X.), fhows that it is paffed, and introduces the hall in his hand. He then takes the ball uader the cup $B$, and throws it (IX.) through the two cups C and B. Announcing to the company its paffage, he raifes (X.) the cup, and flows that there are two balls, introducing (III.) at the fame time the third. He then takce the lalt ball, viz. that which is under the cup A, covers again with the left hand the two cups $B$ and $C$. and throws (IX.) the third ball through thefe two cups. He then announces their paffage, raifes the two cups, and fhows the three balls, covering agair the cup C with the two others.
22. With the three lalls wobich are upon the cup C , and the one in his band; to take out the three through two cups.-"I take (fays the performer) (VIlI.) tbe firft ball, and put it (II) into my bag. I take (VIII.) in the fame manner the fecond, and I put it alfo into my bag. I take (VIII.) the third, and I put it into my bag. (putting in really that wowich he bad in his band.) While he defires the fpectators to obferve that there are no more in the cups, he raifes the cup A with the left hand, and, putting it in its place, raifes with the right hand the cup C. In fupporting it with the cup $B$, he puts it down quickly, and a little on the fide of $B$, and at the fame time places C on the table, under which-will be found the three balls, which had not time to feparate.
23. With the three balls remaining under the middle cup, and three others taken out of the bag; to pafs, in one altion, three balls through a cup.-This trick is begun by the performer taking three balls frem his bag, and putting them on the top of the cup B, which he covers with the cup A. Ordering them to difappear and to pafs under the cup C, he takes away very fuddenly with the left hand the cup B, as is done in the preceding trick, leaving in the middle of the play the cup C, under which the balls ate found. Taking them then away, and replacing them on the fame cup, he makes them return again in the fame inanner under the $\operatorname{cup} \mathrm{C}$. At lalt he takes the three balls, and putting
them in his bag, pretends to pafs them throuth the them in his bag, pretends to pafs them through the table under the cup where the others were. He then returns two or three of thefe laft halls into his bag. and takes two white balls, which he puts upon the table.
24. With the biack ball remaining on the table, tavo other white balls, and a black one which be bolds fecretly in bis band; to pafs three balls from one cup into another.
N. B. To make the balls white, they are rubbed with a little chalk inllead of being blackened with the candle.
" Let us now ( Cays the operator) have a trick to prove that I do not conjure the balls. There is nothing under this cup C, (introducing the black ball that was in bis band). There is no great thing under this B. I place there thefe three balls, (the three wobich are upon the table, of which be conjures the zwbite one.) There is nothing more under this thind cup $A$, (introducing there the zubite ball). I order one of thele two white balls which are under the cup B, to pafs under this A." With thefe words he raifes the cup B; and taking the white ball in the fingers of his left hand, and the black one in thofe of the right, he fhows then,

$$
5 \mathrm{D} \text { faying }
$$

Saying, "Ofitrve that there is but one white one. I put agrain thefe two balls under the cup B." While fpeaking thus he puts the white one under the cup. and conjures the other, while feigning to pot it in with that of the left hand. He then announces its pafiage; and while he does fo, railes the cup $\dot{A}$, and introduces the black ball. Commanding then the Wack ball to pafs under the cup $A$, he raifes the cup $B$, takes in his right hand fingers the ball which is there, and fhows it. "I put it again (fays he) (II.) under this cup (conjuring it); and I fhow you that it is pafed under this A, (entroducing there the white ball.) I order at latt the white ball. Which is under this cup B, to pals into this A." While telling the compauy that it is paffed, he raikes the cup $A$, and puts the three balls upon each cup, the black one upou the middle.
25. With the thee balls put at the top of the cups, and that which bus been iufcried under one of thenn in the preceding trick; to change the colour of the balls. The operator goes on with his difcourfe: "If there is any one here who knows how to play the cups and balls, he will do well to obferve, that it is not penfible to do this tiok by the common method, and with three halls only. However, 1 liave no more, (lloreving his bands). I take this whate hall (that sulaids is upont the cup C ), and 1 throw it (1X) throneh this cup the fane unsir welich be bujt a biak bail in the preceding trick). I take this black ball (suit's the lift-hand fingers) ; there is nothing under this cup 13 , (introdue cing there the rubit: bull). I throw it (IX.) through this cup) B, (taking again the ball in bis rightland fin. gers). I take this other white ball, (with his lefiband finger: . 'There is nothing under this cup $A$, (introducing the block ball): I throw it (IX) through the cup $A$, (taking it again into lis righs-band fingers to sonjure it). Obferse that they lave all changed their colour," (covering each of them quith thit cups).
26. W'ith the thice latls aubich are lift under the cups, tauo white talls, and a Uluck one that be took trick by trick from his bard to change the fizes of the balls.--In performing this trick the opetator takes away the white ball which is uncter the cup C with his left-hand fingers, and, raifing the cup with his right, introduces there a white ball which he took out of his hag. The white ball which he introduces is kept in his land with the fourth and little finger; and he raifes the cup in the fame manner as wher he introduces the balls. In turning over the cup after wards, l.e advances his hand to introduce this ball. Thele balls frould be filled with horfe-hair or paper, fo that they may be very light, and make no noife. The operator then tells his company, that he makes the ball pafs through the table under the fame cup; and while he fpeaks thus, he takes the ball again in his right hand, and white putting his hand under the table, he takes a black ball out of the bag. He then takes away the ball from the eup B, introducing the black 'one in its ftead. He then tells the fpectators, that he makes it repals through the table; and, while he tells them fo, he takes a white ball; then, while taking away that which is under the cup A, he introduces that ball, making it repafs in the fame manner through the table, and at lalt fhows them to the company, and covers them with their cups.
27. With the three balls which are under the cups, two. other black balls. and a white one that ruas taken trick by trick from bis bay; to pals the balls from one cut) into anather.- "Obferve well (fays the operator), that there are two white balls under thefe two cups $A$ and $C$, and a black one mader this (raifing the cups). I cover again thefe three balls (corvering each of them zuith a cup). 1 make to pais out through the table the white ball which is under the cup C." Here he takes a white ball from his har ; and in order not to fail, the black and white balls thould be in feparate pockets. Having taken out the ball, he puts the sirlt into his bag, telling the company that there is now nothing under the cup $C$; and while he fays fo, he raifes it, holding the hall with his little finger, proceeding in his difcourle as follows. "I take away this ball (wat robich is undir the crop A), and ( pafs it throngh the table under the $\operatorname{cup} \mathrm{C}$ (buking a black ball from bis bug.") While the paftuge of this hall is announced, he raires the cup C w take it away and how it; and introtucing there this black b:ll, "I put again (fays he) this other white ball in:o my bag, and I command the blact: one which is under the cup $B$ to pafs under this. It is no longer under this cup :" and while he fays for he raifes the cup 13, in fupporting with his little tin. ger the ball which remains there. Announcing it paffage, he raifes the cup $C$ and thows the ball; takiug it afterwards into the left hand, throws it into the $a: r$, returning it into his right hand, and feigning to throw it into the air a fecond time, he lets it fall into his hag; calling his eyes upwards and downwards as if he faw it fall upon the cup $B$; he raifes this cup, and thows it to the fpectators, as the former, pafed througlo the cap.

## Sect. II. Performances with the Caras.

Previous to the performances with cards, it will he necelfary to explain the method of making the pafs; that is, bringing a certain number of cards from the bottom of the pack to the top; as many of thele performances depend on that manceuvre.

1. Huld the pack of cards in your right hand, fo that of nakinge the palm of your hand may be under the cards : place the palio the thumb of that hand on one fide of the pack, the firlt, fecond, and ebird fingers on the other fide, and your little finger between thofe cards that are to be brought to the top and the relt of the pack. Then place your left haird over the cards, in fuch a manner that the thumb may be at $\mathrm{C}(\mathrm{fig} .20,21$.), the forefinger at $A$, and the other fingers at $B$.

The liands and the two parts of the cards being thus difpoled, you draw off the lower cards confmed by. the little finger and the other parts of the right hand, and phace them, with an imperceptible motion, on the top of the pack.

It is quite neceflary, before rou atrempt any of the experiments that depend on making the pars, that yous can perform it fo dexterounly that the eye cannot difinguifh the motion of four hand; otherwife, inttead of deceiving others, you will expofe yourself. It is alfo proper that the cards make no noife, as that will occafion fufpicion. This dexterity is not to be attaioed without fome praEtice,

There is a method of preparing a pack of cards, by
lifecting arie or more that are a fmall matter longer or wider than the relt; which preparation will be necelo fary in feveral of the following experiments.
iecard of 2. Have a pack in which there is a long card; open indtun, the pack at that pert where the long card is, and prefent the paik to a perfon in fuch a manner that be will naturally craw that card. He is then to put it into any part of the pack, and thuffe the cards. You take the pack, and offer the fame card in like nianuer to a fecond or third perfon; ooferving, however, that they do not ttand near enough to fee the card each other draws. You then diaw feveral cards yourfelf, among which is the long card, and alk each of the parties if his card be amone thofe cards, and be will maturally fay Yes, as they have all drawn the fame card. You then fhuflle all the cards together, and cutting them at the inng card, you hold it hefore the firlt perfon, fo that the others may not fee it, and tell him that is his card. You then put it ayain in the pack, and fhufHing them a fecond time, you cur azain at the fame card, and hold it in like manner to the fecond perfon, and fo of the relt ( $A$ ).

If the firg perion fhould not draw the long card, each of the parties muit draw different cards; when, cutting the pack at the long card, you put thofe they have drawn over it, and feeming to fluffe the cards indiferiminately, you cut them again at the long card, and thow one of them his card. Yon then thuffle and cut again, in the fame manner, and fhow another perfon his card, and fo on: remembering, that the card drawn by the laft perfon is the firt next the long card; and for of the others.

This experiment may be performed without the long card, in the following manner. Let a perfon draw any card whatever, and replace it in the pack: you then make the pafs, and bring that card to the top of the pack, and muffie them without loling light of that. card. You then offer that card to a fecond perfon, that he may draw it, and put it in the middle of the pack. You make the pafs and thuffe the cards a fecond time in the fame manner, and offer the card to a third perfon, and fo again to a fourth or fifth, 28 is more fully explained further on.
3. You let a perfon draw any four cards from the pack, and tell him to think on one of them. When he returns you the four cards, you dexteroully place two nf then under the pack and two on the top. Under thote at the bottom you place four cards of any fort ; and then, taking eight or ten from the bottom cards, you fpread them on the table, and afk the perfon if the card he fixed on be among them. If he fay No, you are fure it is one of the two cards on the top. I'on then pafs thofe two cards to the bottom, and drawing off the lowett of them, you afk him if that is not his card. If he again lay No, you take that card up, and bid him draw bis card from the bottom of the pack.

If the perfon fay his card is among thole you firf drew from the boitom, you mult dexterounty take ap the four cards that you put under them, and, placing
thofe on the top, let the other two be thy hoteon: carda of the pack, which you are to draw in the manner before deleribed.
4. Afrre a card has been drawn, you place it under Divimation the long card, and by fhumbing them dexteroufly yon hy thee bring it to top of the pack. 'Then lay, or throw, the :word. pack on the ground, obferving where the top card lice. A handkerchief is then bound over your eyes, in fuch a manner !nowever that you can fee the ground, which may be ealily done. A fword is then put into your hand, with which you touch feveral of the cards, feemingly in great donbt, but never loling fight of the topcard, in which at laft you fix the point of the fword, and prefent it to him who drew it. Wwo or three cards may be difcovered in the fame mamer, that is, by placing them under the long card, and then bringing them to the top of the pack.
5. You mult have in the pack two cards of the fame The traci. fort, fuppofe the king of fpades. One of thefe is to be murable placed next the bottom-card, which may be the feven ${ }^{\text {ards. }}$ of hearts, or any other card. The other is to be pla. ced ai top. You then thume the cards, without dit. placing thofe three cards, and flow a perfon that the battom-card is the feven of hearts. Then drawing that card privately afide with your finger, which you have wetted for that purpofe, you take the king of fades from the botom, which the perfon fuppofes to be the feven of hearts, and lay it on the tahle, telling hion to cover it with his hand. Yon then lluffle the cards again, without difplacing the firt and laft card, and paffing the other king of rpades at the top to the battom, you flow it to another perfoin. You then draw thai privately away; and taking the botenm-card, which will then be the feven of hearts, you lay that on the table, and tell the fecond perfon, who believes it to be the king of fpaces, to cover it with his hand.

You then command the feven of hearts, which is fuppofed to be under the hand of the firft perfon, to change into the king of fades; and the king of fpades, which is fuppofed to be under the hand of the fecond perfon, to change into the feven of hearis; and when the two parties take their lands off, and turn up the cards, they will fee, to their no finall allonithment, after having fo carefnlly obferved the bottom-cards, that your commands are puncually obeyed.
6. Take a card, the lame as your lons card, and The inrolliag it up very clofe, put it in an egg, by making comprea hole as finall as poffible, and which you are to fill henfable. up carefully with white wax. You then offer the long fration. card to be dawn; and when it is replaced in the pack you thuthe the cards feveral times, giving the egg to the perfon who drew the card, and. while he is break. ing it, you privately withdraw the long card, that it may appear, upon examining the cards, to have gone from the pack into the egg. This experimeat may be rendered more furprifing by baving feveral eggs, in each of which is placed a card of the fame fort, and then giving the perfon the liberty to choofe which egg he thinks fit.

5 D 2
This
(A) There is frequently exhibited another experiment, fimilar to this, which is by making a perfon draw the long card; then giving him the pack, you tell him to place bis card where he pleafes and fhufle them, and you will then name his card or cut the pack where it is. You may alfo tell him to put the pack in his pucket, and you wili draw the card; which you may eafily do by the touch.

This deception may be ftill further diverfified, by having, as moft public performers have, a confederate, who is previoufy to know the egg in which the card is placed; for you may then break the other eggs, and flow that the only one that contains a card is that in which you direeted it to be.

To name feveral cards that
two perfons
have drawn
7. Divide a piquet paek of cards into two parts by a long card. Let the firt part contain a quint to a king in clubs and fpades, the four-eighth, the ten of diamonds, and ten of hearts; and let the other part contain the two quart majors in hearts and diamonds, the four fevens, and the four nines ( B ).

Then fluffle the cards, but obferve not to difplace any of thofe cards of the laft part which are under the long card. You then cur at that card, and leave the pack in two parts. Next, prefent the firlt of thofe parts to a perfon, and tell him to draw two or three cards, and place the remainder on the table. You prefent the fecond parcel in like manner to another. Then having dexteroully placed the cards drawn by the firt perfon in the fecond parcel. and thofe drawn by the fecond pcifon in the firfl parcel, you thuffe the cards, obferving to difplace none but the upper cards. Then fpreading the cards on the table, you name thofe that each perion drew; which yuu will very eafily do, by obferving the cards that are changed in each parcel.
8. On the ace of fpades fix, with foap, a beart, and

The two convertible nces. on the ace of hearts, a fpade, in fuch a manner that they will eafily fip off.

Show thefe two aces to the company; then taking the ace of fpades, you deGre a perfin to put his foot upon it, and as you place it on the ground, draw away the fpade. In like manner you place the feeming ace of hearts under the foot of another perfon. You then command the two cards to change their places; and that they obey your command, the two perfons, on taking up tbeir cards, will have ncular demonitration. A deception fimilar to this is fometimes practifed with one card, fuppofe the ace of Spades, over which a heart is placed nightly. After fhowing a perfon the eard, you let him hold one end of it, and you hold the other, and while you amufe him with difcourfe, you fide off the heart. Then laying the card on the table, you bid him cover it with his hand. You then krock under the table and command the heart to turn into the ace of fpades. By deceptions like thefe, people of little experience, and mucls conceit are frequently deprived of their money, and rendered ridiculous.
The fifteen thoufand Liver.
9. Ynu muft be prepared with two cards, like tbnfe reprefented by fig. 22. and with a common ace and a five of diamords.

The five of diamonds and the two prepared cards are to be difpofed as in fig. 23. and holding them in your hand, you fay, "A certain Frenchman left 35,000 livres, which are reprefented by thefe three cards, to his three fons. The two youngeft agreed to leave their 5000, each of them, in the hands of the elder, that he might improve it." While you are relling this llory, you lay the 5 on the table, and put the ace in its place, and at the fame time artfully
change the pofition of the other tivo eards, that the three cards may appear as in fic. $2+$. You then refume your difiourie, "The eldett brother, intead of improving the money, loft it all by gaming, except 3000 livres, as you here fee." You then lay the ace on the table, and, taking up the 5 , continus your fory: "The eldeft, forry for having lolt the muney, weirt t" the Eaft Indies with thefe 3000, and brought back 15,000 ." You then fhow the cards in the fame polition as at firlt, in fig. 22.

To render this deeeption agreeable, it mult be performed with dexterity, and thould not be repeated, but the cards immediately put in the pocket; and you fhould have five common cards in your pocket, ready to fhow, if any one fhould defire to fee them.

10 T'aks a parcel of cards, fuppofe 40, among To tell which iniert two long cards: let the firl be, for ex-number ample, the 15 th and the other the 26 th , from the card-by top. Seem to fluffe the cards, and then cutting them thenwe. at the firlt long card, poife thofe you have cut off in your hand, and fay, "there fhould be here 15 cards." Cut them again at the fecond long card, and fay, There are here only 11 cards." Then poifing the remainder, you fay, "here are 14 cards"
11. Several different cards being fown to different To nam perfons, that each of them may fir on one of thoofe cards; feveral to name that on which each perfon bas fixed. -There mult which d be as many different cards thown to each perfon as ferent ; there are perions to choofe: therefore, fuppofe these fous hav are three perfons, then to each of them you mult how fixed. three cards; and telling the Girlt perfon to retain one in his memory, you tay thofe three cards down, and fhow three others to the fecond perfon, and fo to the third. You then take up the firft perfon's cards, and lay them down one by one, feparatcly, with their faces upward. You next place the fecond perfon's card over the firft, and in like manuer the third perfun's card over the fecond's; fo that in each parcel there will be one card belonging to each perfon. You then afk each of them in which parcel his card is; and when you know that, you immediately know which card it is ; for the firft perfon's card will always be the firt, the fecond perfon's the fecond, and the third perfun's the third, in that parcel where they each fay his cand is.

This experiment may be performed with a fingle perlon, by letting him fix on three, four, or more cards. In this cafe you muft fhow him as many parcels as he is to choofe cards, and every parcel mult. confift of that number, out of which he mult fix on one; and you then proceed as before, he telling you the parcel that contains rach of his cards.
12. Make a ring large enough to go on the fecond The ma or third finger (ing. 15.), in which let there be fet a ring. large tranfparent Hone, to the botton of which mult be fixed a fmall piece of black filk, that may be either drà wn afide or expanded by turning the tlone round. Under the filk is to be the figure of a fmall card.

Then rake a perfon draw the fame fort of card as that at the botiom of the ring, and tell him to burn it. in the candle. Having firtt hown bim the ring, you

〒. Fig. 20.

7 7in 21 | $\pi \%$ |  |
| :--- | :--- |
|  | A |

ETery. 24.

take part of the burnt card, and reducing it to powder, you rub the fone with it, and at the fame time turn it artfully ahout, fo that the fmall card at buttom may come in riew.
13. To change one card into annther.-Provide a mahogany tea caddy about four or five inches deep, and long enough to admit a common fized playing card:
Plate (fee fig.9.). This caddy mult be furnithed with a Clxvil. moving falle bottom B , inoveable upon hinges on the infide edge of the front $A$. This bottorn may be made of brafs, tin, or lead ; and the falfe bottom mult be fo exactly fitted, that it cannot, from a fight view, be dillingnifhed from the other. The inlide of both caddy and falfe bottom ought to be lined with black or other dark-coloured cloth or velvet, fo that it may not make any noife in falling down. It would be proper that the falfe bottom fhould rife with a fpring towards the front and it mult be kept tight with a brals fpring-catch ( $a$, fig. 1o.) fcrewed to the left fide of the box near the top, and which is hid by tbe cloth covering. The end of this fpring projects a little into the front. It is driven back, to let go the falfe hottom, by means of a fmall bent wire $l b$ let into the front of the caddy; and this pin is moved by the bolt $c$, which, when the box is locked, fhoots out againlt it, by reafon of the fpring being driven in ; by which means the bottom Iprings down, and covers the card placed in the box.

Before you attempt to thow any trick with this caddy, a card mult be placed in the infide between the front $A$ and the falfe bottom $B$, fpringing up the bottom afterwards againft the front; after which it is ready for ufe, and fhown openly to the company without any danger of a difcovery.

Two perfons may now be defired to draw two dif. ferent cards from a paek, ne of which muft be the fame wi.h the one concealed in the caddy. Taking this card from the perfon who drew $i$, you put it in the pack, pretend to fhuffe it, bur keep the card either uppermoft or undermolt, fo that you can eafily find it afterwards. Defiring then the other perfon to come forward and put his card very attentively into the caddy, you in the mean tine fecretly convey away from the pack the card drawn by the other; then, giving him the key, you defire the caddy to be locked up. After fome pretended conjurations, defire him to unlock it again and take out the card; which he will find not to be his, but that drawn hy his neighbour: his card being apparently vanifhed from the caddy, as the other is from the pack.
14. Provide twe pieces (f palteboard A and B(fig. . I.) of equal dimentions, $3 \frac{1}{2}$ inches long and three broad. Place thefe be fide olle another, as fhown in the figure. Take then a very fmosth filk ribbon, and put a band of it from $C$ to $E$ towards the edge of the patteboard A , and another from D to F in fuch a manner as to come beyond the palteboard, and to admit of being folded over at the two ends. This mult be glued on the back of the board $A$ at the places $C$ and $D$, and at the back of the board $B$ at the places $E$ and $F$. Place two other bands in a limilar manner on the palleboard B, turning them over on the back of the Lame board at the places I and $I$., and at the back of A at the places G and H . Thefe two bands hould fall in the infide of the palleboard, according to the breadth
of the ribbons. The two pafleboards being now placed the one upon the other, will form a kind of port-folio, one of the fides of which will always be hinged when the other is opened. Four fmall bands of the fame ribbne are to be put at the four extremities of the fides $M N Q R$ of the two pieces of patteboard; obferving that they pafs below the bando already placed. Glue their ends in the fame manner as their ends at the back of the boards, ornamenting alfo the two fides O and P of the palleboard B with pieces of the fame ribbon; but thefe fix laft bands are of no ufe in the performance.

Two pieces of paper folded like the cover of a letter mult now be provided, large enough to cover the two ribbons GI and HL, as well as the face contained within them. Glue one of thefe up on the two ribbons, and apply the other below this; fo that the uppermoll of thefe two wrappers may fall exactly over the other, iuclofing and hiding the two ribbens entirely. A ficond port-fulio fimilarly con!ructed is now to be provided, and both of them covcred with coloured paper from the fides where the ribbons are glued and folded - The deceptions with thefe portfolios are as fullows.
r. Two carls, chofen at random, baving bcen /out up. in tzo fiparate places; to make thenn pafs reciprocaly y Irons the one into the other.-The purt-folios beng conitructed in the manner above defcribed; if you open one of them either on the one fide or on the other, one of the paper wrappers will always be vifible; and thus it will naturally be fuppofed that there is no more but one. Having then fecretly inclofed a card in each of the wrappers of the port folios, procure a paek of cards that has but two forts, and caufe two perfons faily draw two cards fimilar to the firft. Piefent then a port-fulio, open, to the firlt perfon who drew a card fimilar to that which was placed in the fecond, de firing him to place it in the wapper which he finds vacant. Take back then the port fulio; and, in placing it on the table, attfully turn it over: having placed likewife in the vacant wrapptr of the fecond port-fulio the card drawa by the fecond perfon; and putting it in the fame way upon the table, command the cards reciprocally to pafs from the one port-folio inte the other; and open them fo that each of the perfons may take out the card which the other inferted.
2. Acard being but up in the port.folio; to make it return into the pack.-To petfurm this, precure a pack which has two eards of the fame kind. One of thefe is to be openly drawn, and the perfon who has done fo mull be told to fhut it ap under the wrapper of one of the port-Folios; and intorm him that you will make it return into the paak. Give him the port-folio to blow upon ; and on openng it, prefent him with the empty wrapper, to fhuw him that his eard is not there; atter which, prefenting him with the pack, he will tind there the other card, which he will naturally imagine to be the one he put into the wrapper.
3. To nude an azffuer appear to a quefion fecretly written. Tranteribe on different cards a certain number of queftions, and on others the fame quellions with their anfwers; taking care to have the hand-writing as mucla. alike as poffiole, fo that no difference can tafily he perceived. The fame caution mult be obferved with. regard to the cardsthemfelves ; which, for that reafon,

The card in 15 . Proride a mirror, sither round, as A (fig. 18.), the mirror. or oval, the frame of which mult be at leaft as wide as Plate ard. The glafs in the middle muft be made to move in the two grooves CD and EF , and fo much of the quicksilver mut be fcrapeo off as is equal to the fize of a common card. You will oblerve that the g'afs mu't likevife be wider than the ditance be$t$ ween the frame by at leaft the width of a card.

Then pafte over the part where the quickfilver is rubbed off a piece of pafteboard, on which is a card that muft exactly fit the fpace, which muft at firft be placed belind the frame.

This mirror mut be placed againt a partition, though which is to go two ftrings, by which an afo fittant in the adjoining room can eatily move the glafs in the grooves, and confequently make the card appear or difappear at pleafure (c).
Matters being thus prepared, you contrive to make a perfon draw the fame fort of card with that fixed to the mirror, and place it in the middle of the pack: you then make the pafs, and bring it to the bottom; you then direct the perfon to look for his card in the mirror, when the confederate behind the partition is to c̀raw it flowly forward, and it will appear as if plared between the glafo and the qrickfilver. While the glats is drawing forward, you fidé off the card from the bottom of the pack, and convey it away.

The card fixed to the miroor may eafily be changed pach time the experiment is purnormed. This experiment may ako be made with a print that has a glafs before it and a frame of fufficient wideth, by making a flit in the frame thruath which alie card is to pafs; but the effect will not be to flriking as in the nirmor.
The marvellous valc.

## chas

ought to be paia ones. Having writen with a pencil at the bottom of the firt quetlions their correfpond. ing anfwers, fhat up one of them fecretly in the portfulio: and prefenting them to ariy perfon, let hime draw as by chance that which is fimilar to the one thus Shit up. Make him then place in the other wrapper the queflion whlech he had drawn; and telling him that you are about to write an anfwer even through the port-folio, take a grlafs, and pretend to read in it the anfwer to the queftion. Open it afterwards, fo that he may take out the other card himfelf, and he will imagine it to be the one he felected.

In performing this trick, it will be proper to hare a port-folo of the fane kind with the two defcribed, which opens only at one fiue, and which confequently has but one wrapper. This mut be flown to fuch as feem to be too inquititive, and will be of ufe to prevent then from contertaining any idea that the folio opens upon buth fidea. The former mutt thereforc be iminediately put into the pocket, in order to give an opportunity of drawing out the other in cafe the portfotio flould be alked for.
and let the divifions $c$ and $d$ be wide enought to ad. mit a pack of cards, and thofe of $e, f, \delta$, one card only.

Iix a thread of filk at the point $H$, the other end of which paffing down the divilion $d$, and over the pully I, runs atong the bracket I., and goes out behind the partition M.

Take three cards from a piquet pack, and place one of them in each of the divifions $e, f, g$, making the filk threarl or line go under each of them. In the divifion $c$, put the pack of cards from which ynu have taken the three cards that are in the other divifions.

Then take another pack of cards, at the top of which are to be three cards of the fame fort with thofe in the three fmall divitions; and, making the paft, briag then to the middle of the pack, and let them be drawn by three different perfons. Then give them all the cards to Glufte ; after which place the pack in the diviJion $a$, and tell the parties they fhall fee the three cards they drew come, at their command, feparately out of the vale.

An affitant behind the partition then drawing the line with a gentle and equal motion, the three cards will gradually rife out of the vafe. Then take the cards unt of the divifion $c$, and fhow that thofe three catds are gone from the pack.

The vafe mult be placed fo high that the infide cannot be feen by the company. You may perform this experiment allo without an affitant, by fixings a weight to the end of the filk line, which is to be placed on a fupport, and let down at pleafure by means of a foring in the partition.
17. Let a fmall perfpective glafs be made, that is The diviwide enough, at the cad where the object-glafs is pla- natine perced, to hold a table fimilar to the following.

| 1.131 | 10.132 | 19.133 |
| :--- | :--- | :--- |
| 2.231 | $11 . .232$ | 20.233 |
| 3.331 | $12 . .332$ | 21.333 |
| 4.121 | 13.122 | 22.123 |
| 5221 | 14.222 | 23.223 |
| 6.321 | 15.322 | 24.323 |
| 7.111 | 16.112 | 25.113 |
| 8.211 | 17.312 | 26.213 |
| 9.311 | $18 . .312$ | 27.313 |

Take a pack of cards that confits of 27 only, and giving them to a perfon, defire him to fix on any one, then fhuffe them, and give the pack to you. Place the 27 cards in three beaps, by laying down mne al. ternately on each heap; but before you lay each card down, how it to the perfon, without leeing it yourfeif: and when the three heaps are finifhed, ak him at what number, from 1 to $2 \%$, he will have his card
(c) This experiment may be ferformed without an anifinat, if a table he placed againft the partition, and the firing from the glais te mede to pafs through a leg of it, and conmunicate with a fmall trigger, which you may cafly pufh down with your foot; and at the fame time wiping the ghafs with your handkerchief, as if ro make the card appear the more confpicuous. It may alfu be diverfifit, by having the tigure of a head, fuppofe that of fome abfont friend, in the place of the card.
appear, and in which heap it then is? Then look it the heap through the glatis, and if the frot of the three numbers which tands againt that numoer it is to appear at be $t$, put chot heap at top; if the number be 2 , put it ia the middle; and if is be 3 , pat is at botom. Then divide the carls into three heaps, in the fame manner, a fecoad and third time, and his card will then be at the number he clu fe.
For example: Suppofe he defire that his card fhall be the zoth from the top, and the firlt time of making the heaps he fay it is in the third heap: you then look at the table in the peripective, holding it at the fame time over that hesp, and you fee that the firt figue is 2 ; yout the refore put that figure in the midile of the pack. The fecond and third times you in like manner put the heap in which he fays it is, at the botom, the number each time being 3. Thea lonking at the pack with your glafs, as if to difcover which the card was, you lay the cards dewn one by one, and the 2 cth card will be that he fixed on.

You may thow the perfon his card in the fame man. ner, without afling him at what number it fhall appear, by fixing on any number yourfelf.

The fortgeing experiments with the cards will be found fufficient to explain moft others of a limilar nature that have or may be made: the number of which is very great. To perform thoie we have defcribed requires no great practice; the two principal points are, the making the pafs in a desterous manner, and a certain addrefs by which you influence a perfon to draw the card you prefent. Thofe that are performed by the long card are in genetal the moll eafy, but they are contined to a pack of cards that is ready prepared; whereas thofe which depend on making the pafs, may be performed with any pack that is officred.

## Sect. HI. Experiments with Sympathatic Inks.

 [See Symputbetic Ink.]
## Experiments with Clasa I.

1. Make a book of 70 or So lenves; and in the cover at the end of it let there be a cafe, which opens next the binding that it be not perceived.

At the top of each right hand page write any queftion you pleafe: and at the beginning of the book let there be a table of all thofe queltions, with the number of the page where each is contained. Then write with common ink, on ftparate papers, each about hall the fize of the pages in the book, the fame quellions that are in the book, and under each of them write, with the ink made of the impregnation of faturn, or the diffolution of bifmuth, the anfwer.

Soak a double paper in the vivifying liquor made of quick lime and orpiment, or the phlogiton of the liver of fupher, and place it, juft before you make the experiment, in the cafe that is in the cover of the book.

Then deliver fome of the papers on which the quesions are wrote to the company ; and, after they have chofen fuch as they would have anfwered, they put them in thofe leaves where the fame quellions are conta:ned, and, fhutting the book for a few minutes, the
fulphurcous fpirit with which the paper in the cover of the book is imbibed, will penetrate the leaves, and make the arfwers vitible, which will be of a brown colmr, and more or lefs deep in proportion to the sime the hook has been clufed ( D ).
2. Make a hox about four inches long, and three The marwide, as ABCD, and quite flatlow. Let it thut with rellouspor. hinges and faften with a hook; and let it have two trait, fig. 870 bottoms, the lowefl of wood, that draws out by a grouve, and the uppermolt of pateboard. Between thefe twe bottoms is to be placed a paper dipped in the rivifying liquor mentioned in the iatt experiment. Let there be alfo a board of the fame fize with the infide of the box, which being placed in it may prefs a paper againft the palteboard bottom.

Then take feveral pieces of paper, of the fame fize with the inlide of the box, and draw on them the figures of men and women, in different attitudes and emplogmeas, as walking, riding, reading, writiag, \&c. Thefe figures mult be drawn with a new pen, or pencil, dipped in the impteguation of Saturn.

Being thus proviced, and having privately placed the paper dipped in the vivifying liquor between the two bottoms, , ou tell a perfon you will how him what an ablent friend of his is doing at the prefent hour. Yon then give him the paper adapted to the employment you intend, and tell him to write his friend's name at the bottom, that you may not change the paper. Then placing that paper next the pafteboard bottom, and purting the piece of wood over it, you flut the box. After amufing him with difcourfe for three or four minutes, you take out the paper, when he will fee his friend in the employment you have affigned him.
3. Ler a workman make a hand of wood, as in fig. The artiff1t. fixed at the end next the elbow to the piece $\bar{E}$, cial hand, the ends of which go through the fiews CD and EF. The fore and middle fingers, and the thumb, are to be moveable at their juints. There muft go a wire tbrough the arm, that is fixed at one end to the forefinger, and at the other to the piece E, round which it is to move: under the two joints of the two fingers are alfo placed two fmall fprings, which are to raife it up.
To the fore-finger and thumb fix two frall rings, through which a pen nay be put, fo as not to impede their motion. Under the arm at the point I, place a fmall brafs roller, which ferves to fuftain the arm.
The pedellal on which this hand is placed mutt be at leaf a foot long, if the hand be of the natural fize, and about eight inches wide. This pedeflal mult be hollow, and at the part ST there muf be an opening about three inches long and two inches wide; the whole pedeftal may be covered with a thin fuff, by which the hole will be concealed. There is to be a valve, or fort of trap door, on the iufide of the pedeftal, which is to faften againft the opening.
Over the hand and pedeftal place a glafs frame, as in the figure: cover the hand with fine leather of flefh colour, and decorate the arm with a ruffe and cuff. which will entirely conceal the machinery.

Then take a number of cards, and write on them different queftions; and on the fame number of papers write,
(D) If a weight be placed upon the book, the effect will be the foomer produced. Or you may gut the bouk in a box that will prefs it clofe down.
wite, with the impregnation of lead, the anfwers. Give the cards to any one, and let him choofe a queftion; and you place the paper with the anfwer under the pen in the hand, letting him firt fee there is no writing on it ( E ). Now the pedeftal being placed againft a partition, the end $F$ is to go through it. Therefore an affiftant, upon a fignal given, turns a handle fixed to F; and, as the piece Eturns round, the wires that move the fingers and thumb are alternately lengthened and mortened, by which their joints are kept in continual motion; and the forew at the fame time turning gently from $F$ towards $G$, gives the whole arm a motion which very much refembles that of naturc ( F ).

The hand and pen ferve here merely to affit the illufion : but if a bit of fponge, dipped in the vivifying liquor, be placed at the end of the pen, as it goes over the writing on the paper, it will make it become gradually wifible, and in this cafe the trap door and dipped paper may be omitted (G).

## Deception with Class II.

The wri- 4. Take feveral pieces of paper, of a fize that you ting arainft can put in any book that will go into your pocket, the wall. and write at the top of each of them a quetion, with common ink, and under it write the anfwer with the folution of gold or fiver. Give any of thefe papers, clofely wrapt up, to a perfon, and tell him to place it againf the wall of his chamber, and keeping the door locked he will next day find the anfwer wrote on it.

As the gold ink will fometimes give a yellow caft to the paper, you may previouny give a flight tincture of that kind to the papers you ufe for this purpofe.

## Deveption with Class III.

Mazical 5. On diferent papers draw the figures of feveral vegctations.!eaves or flowers with one of the colourlefs juices melltioned: then take one of the correfponding leaves or flowers, and laying it on an iron plate, over a cha-fing- difh of hot coals, les it burn to aftes. Put thefe afles inte a fieve, in which there is fome very fine feelfalings, and fift them over the paper on which the flower is drawn, when they will adhere to the glutinous liquor, and form an exact reprefentation of the figure of the leaf or flower.

## Deceptions with Ceass IV.

The talifmar, fig 7 6 Make a little triangular box, each fide of which is to be about five inches, and let its infide be divided into three parts. The firf part $A$, which makes the bottom of the box, is to be covered by the fecond part $B$, in form of a cafe, and let the top $C$ exa ctly cover the part $B_{2}$ as is expreffed in the figure and the profiles.
$\mathrm{N}^{\circ}$ : 80 .

## E M A I .

Upon the bottom of the box let there be a plate of copper, about one-twentieth of an inch thick, on which let there be a number of bieroglyphic characters contiguous to each other, and cut in different forts of metal.

On the top of the cover place a $k n o b O$, that goes through it, and to which the copper triangle $Q$ is to be fixed occafionally, in fuch manner as it may go into the cafe B. There mult be a fpace of one quarter of an incll between the triangle $Q$ and the bottom of the cafe B; into which another plate of copper, of that thicknefs, may be placed.

The outlide of this talifman may be decorated with uncommon figures or characters, to give it the appearance of greater myltery.

On feveral pieces of paper, of the fame fize with the infide of the talifman, write different quacitions in common ink, and write the anfwers in thofe different forts of fympathetic ink that appear when heated, obferving that each word of the anfwer is to be wrote in a different ink.

Having properly heated the triangle, and placed it under the cover, you introduce the talifman, and tell any one of the company to choofe one of the papers on which the queftions are wrote, and place it in the talifman, and he will immediately have an anfwer wrote on that paper, the words of which will be of different colours, according to the different metale of which the talifman is compofed. The paper being placed in the talifman, and the cover placed over it, the heat of the triangle will make the anfwer vifible in a few moments This experiment may be repeated if the triangle be made fufficiently hot; and two papers may be placed in the talifman at the fame time.

This deception, when well executed, occafions a furprife that cannot be conceived by a mere defcription.
7. Make a wooden pedeftal AB, about ten inches The fibyla long, eight wide, and one deep: and at one end erect fig. $5 \cdot$. a box C , about ten inches high, eight broad, and two and a half deep.

The top of the pedeftal mult fide in a groove, on which infcribe a dial M, of fix inches diameter, and which is to be divided into ninetecn equal parts, in twelve of which write the names of the months, and mark the refpective figns of the zodiac; and in the feven other divifions, which mult be next the end $B$, write the days of the week, and mark the figures of the planets. Next the inner circle NO, make an opening into the box, of about one tenth of an inch. On the centre of the dial place an index that turns frecly on its centre.

Within the pedeftal place a pulley $P$, about four inches diameter, which :s to turn on an axis that is directly
(E) The paper dipped in the vivifying liquor is to be previoufly placed againf the opening in the table, and fuppoited by the trap door.
( E ) This mighi be performod without an affilant, by means of a trigger placed in the leg of the table, and communicating with the handles, which the operator might thruft down with his foot. Where expence is not regarded, there may be a complete figure of a man in wood, or plater of Paris, feated by the table.
(G) You may allo have a glafa ink-fland, with fome of the vivifying liquor, into which the pen may he dippred, and it will then appear to write with common ink. The fpectators thould not be permitted to come very eear this machine, which may be applied to feveral other purpofes.
directly under the centre of the dial; and on the upper part of that axis fix a bent index $R$, which comes out at the opening made by the inner circle ( H ), and paffes over thofe féven divifions only on which are wrote the days of the week.

Within the box C , let there be two rollers S and $T$, as in the figure : let that of $S$ contain a fpring; and at the end of T let there be a pulley V , of three quarters of an inch diameter, round which goes a flring or thread that paffes under the fmall pulley X , and is faftened to that of $P$ : fo that when the laft pulley makes about one-third of a turn, that of $V$ may make three or four turns.

There muft alio be a feroll of paper, about two feet long, and each end of which muit be patted to one of the rollers. In the front of the box, between the two rollers, make an aperture D , about four inches long, and one inch and a half wide: to this opening let there be a little flap or nider, by which it may be clofed at pleafure.

The apparatus being thus difpofed, place the index R fucceffively againft each of the divitions marked with one of the planets; and as the paper is gradually wound up the roller, mark, againft that part which is at the aperture D , the name of one of the following fibyls:
$\left.\begin{array}{l|}\text { The Hellefpontian } \\ \text { Cumean } \\ \text { Artemifian } \\ \text { Phrygian } \\ \left.\begin{array}{l}\text { Albunean } \\ \text { Perfian } \\ \text { Libyan }\end{array}\right\} \\ \end{array}\right\}$

On each of the feven cards write a different queflion, and draw one of the feven planets. Next, take a memorandum book that contains feven leaves, and on each of them write the name of one of the foregoing fibyls; in each of the leaves place feveral pieces of paper, and on each of them write, with the fympathetic ink that does not appear till the paper is heated, different anfiwers to the fame queftion.

Then give a perfon the feven cards on which the queftions are wrote, and tell him to choofe one of them privately, and conceal the reft, fo that it can. not poffibly be known which of them he has chofen.

Next, tell him to place the index that points to the month againft tr:.t in which he was born (1), and to place the index of the planets againt that which is on the card he has cloofen, and which is to prefide over the anfwer: you tell him to do this privately, that no one may fee him, and after that to cover the dial with his handkerchief. Then let him open the door that is before the aperture in the box, and tell you the name of the fibyl there vifible.

You then open the memorandum-hook, and taking out the papers that are in the leaf where the name of the fibyl juft mentioned is wrote, you defire him to
Vol. IX. Part II.
choofe any one of them he thinks proper. The talifman ufed in the lait experiment being properly heated, is then to be introduced, when you direct the perfon to put the blank paper into it; and taking it out a few moments after, he will find the anfwer to his queflion.

To make this operation appear the more extraordinary, it will be proper to lave a fmall prefs or cup. board, at the back of which there is a door that opens into an adjoining room, by which means an affiftant having prepared the talifman, may place it in the cup-board the moment before it is wanted. This contrivance will be ufeful on many other occafions.
8. Provide an urn of wood or metal about fix inches high, and two and a half diameter in the wideft part, and of fuch figure in other refpects as you think proper (fee fig. $9 . \%$. Let there be a cylinder of copper C, (fig. 10.) of about one-eighth of an inch diameter, which is to fill a hole AB made in the urn. The tup of this cylinder is to be in the top of the urn, fo that it may be eafily taken out. To this urn there mult be a cover $D$, which fits it exactly.
On a fmall fquare piece of paper draw the figure of a flower or leaf, with that fort of fympathetic ink whofe colour molt refembles it. You then prefent $f e$ veral forts of flowers or leaves to a perfon, and defire him to choofe any one of them. Then put that hower on a chafingdifh of hot coals; and, taking the paper on which it is fecretly drawn, you give it to the perfon to examine, and then put it in the urn, having previoufly heated the cylinder (s). Then taking fome of the afhes of the burnt flower, you ftrew them over the paper, after which you take it out and fhow the company the figure of that flower. While the flower is burning, you may fprinkle fome powder over it, fuppofe that of faltpetre; and by that, mixed with the afhes of the flower, the company may imagine the tffect is produced.
The prefs or cupboard mertioned in the preceding experiment, will be here very convenient for heating the cylinder and placing it in the urn. A fimilar deception may be performed by putting the paper in a copper veffel, that may be placed on an iron plate over the chafingdih in whicls the flower is burnt. But this method has not f myfterious an appearance as the other, and in forme perfons may caufe a fufpicion that the effect is produced by heat.
9. To perform this experiment, you mult obferve, The corio that there are feveral letters which may be changed verible into others, without any appearance of the alteration; cards. as, the $a$ into $d$, the $c$ into $a, f, d, g, o$, or $q$, the $i$ into $b, d$, or $l$, the $l$ into $t$, the $o$ into $a, d$, $g$, or $q$, the $v$ into $y$, \&ec.

Take a parcel of cards, fuppofe 20, and on one of them write, with the ink of the fourth clafs, the word law ( L ), and on the other, with the fame ink, the words old ruoman; then holding them to the lire, they will both become vifible. Now you will obferve, that 5 E by
(н) If the axis be made to pafs through the top of the pedefal, this opering will not be neceffary.
(1) Thefe months and the index are of no othe ufe than to give the experiment an air of greater myftery.
(к) There are fome forts of fympathetic inds that require much more heat than othes.
(2) Thefe letters fhould not be joined.
by altering the a in the word law into $d$, and adding o before the $l$, and oman after the $w$, it beeomes old woman. Therefore, you make thofe alterations with the invilible ink, and let it remain fo. On the reft of the cards you write any words you think fit.

Prefent the eards in fuch a manner to two perfons, that one of then flall draw the word law, and the other the words old woman. You then tell the perfon who drew the word lazv, that it hall difappear, and the words on the other card thall be wrote in its place; and that you may not change the eards, defire each of the parties to write his name on his card. Then putting the cards, together, and holding them before the fire, as if to dry the names jult wrote, the word law will prefently change into old zoomar.

This experiment may be varied by fixing on a word that may be changed into three other words, and making four perfons draw the cards on which thefe words are wrote; and it may be further diverfified by choofing three fuch words, as that the firt ean be changed into the fecond, and the feeond into the third. You then tell him who drew the firt word, that it fhall be changed intn that drawn by the feoond perfon; and him you tell, that his word fhall be changed into that of the third perfon.
10. Write on feveral nips of paper different queRions, and fuch as may be anfivered by the name of fome perfon; for example, Who is the merrielt man in the company? Anfwer, Mr***. To whom will Mifs * * * be married? Anfwer, To Mr * * *. Thefe quellions are to be wrote in the fympathetic ink of this clafs, and expofed to the firt, and the an. fwers wrote in the fame ink, and left invifible. The papers are to be folded in form of letters, and in fuch manner that the part where the name is wrote fhall be directly under the feal, and the heat of the wax will make it vifible. Then give the letter to the perfon who requires the anfiver, and he will find it plainly wrote.
A deception fimilar to this may be made with a number of blank eards, on each of which an ace of Spades is drawn with the invifible ink; then let a perfon choofe any one of them, and inclofe it in a lettercafe, prepared in fueh manner that the figure of the ace fhall be directly under the feal, and on opening the letter it will be immediately vifible.

## Deceptions with Class V.

The incom-
11. Have a box that is divided into three parts? prehenible after the fame manner as the talifman in the 21 ft exwrities. after the fame manner as the talifman in the $21 \AA$ ex-
periment, except that, inflead of being triangular, it muft be of a long fquare (fee 6g. 14.) Divide its top B into two equal parts D and E , as in fig. 13. and to the part D adjuft a plage of eopper L , about one quarter of an incli tbiek, and under both the plate L and the opening E place a cloth. The upper part C mult have a button by which it may be fixed on the cover $B, f o$ as to appear of one pieee with it.

At the bottom of the box place a piece of cleth, or other fluff, on which you may flamp certain mylle-
rions eharacters, and oblerve that the bottom of the cover matt reft upon this chuth.
Then provide a llip of paper GH (fig. 12.) of the fame fize with the bottom of the box; and at each end of it write, with the green fympathetic ink, the name of a different card, and make fome private mark by which you can tell at which eud each name is wrote ( m ).
Take a parcel of eards, and offer thofe two of them whofe names are wrote on the paper to the two perfons, that they may draw them. You tell the parties to keep their eards to themfelves, and yous propofe to make the names of thofe cards appear upon a llip of paper, which you put into the bor. You then afls whicb name of the two cards fhall appear firll. The copper-plate being previouly heated and placed in the cover, you put it over that end of the piper on whiela is the name required, and it will prefently appear. Then taking the paper out and fowing the name wrote, jou put it in again, turning the other end to the lide of the box where the plate is, and it will in like inanner beeome vifible.

The firt name may be made to difappear at the fame time that the fecond appears, if the cloth at the end oppolite to that where the plate is be nade damp.
12. Take a print that reprefents winter, and trace Winter over the proper parts of the trees, plants, and ground, changed with the green fympathetic ink; obferving to make fone parts deeper than others, according to their diflance. When tbofe parts are dry, paint the other objects with their natural colours. Then put the print in a frame with a glafs, and enver the back of it with a paper that is palted over its border only.

When this print is expofed to tbe heat of a moderate fire, or to the warm rays of the fun, all the grafs and foliage will turn to a pleafing green; and if a yellow tint be given to fome parts of the print, before the fympathetie ink be drawn over, this green will be of different fhades; and the feene that a minute before reprefented winter, will now be changed to fpring. When this print is placed in the cold, winter will again appear, and will again be driven away by the warm rays of the fun. This alternate ehange of feafons may be repeated as often as you pleafe; remembering, however, as was before obierved, not to make the print at any time too hot, for then a faded autuma will for ever remain.

## Deceptions with Clags VII.

13. Provide a number of artificial flowers, fuch as The revi rofes, jnequils, pinks, or any other you find conveni- fied bou ent. Thefe flowers mult be made of white thread or quets. filk, and their leaves of parchment. Dip the rofes in the red fympathetic ink, the jonquils in the yellow, the pinks in the violet, and their leaves in a folution of falt of tartar. When they are all dry, form them into fmall bouquets, which will all appear white, and may be ufed in this experiment, either the day they are dipped, or feveral days after.

You take one of thefe bouquets, and after fhowing the
( $M$ ) That there may be no fufpieion of the paper being prepared, you may cut it from a whole fheet, before the company, having previoully wrote the names.
the compary that every part of it is white, you dip it in an infufion of any of the blue flowers mentioned under the article Cozour-Making, $n^{\circ}{ }^{13}$. and, drawing it prefently out, all the flowers and leaves will appear in their natural colours ( N ).
The tran- 14. Write on a paper, with the violet liquor, as fenlorated wititing. many letters or words as you pleafe; and afk any perfon whether he will liave that writing turn to ycllow, green, or red.

Have a fponge with three fides that you can readily diftinguih, and dip each of its fides in one of the three fympathetic inks. Draw the fide of the fponge that sorrefponds to the colour the perfon has chofe, over the wrixing once only; and it will directly change to the colour required ( 0 ).

## Sect. III. Mifccllaneous Performances.

Totellodds 15. A perfon baving an even number of counters in or tecus. one band, and an odd number in the other, to tell in which bard the odd or even number is. Leet the perfon multiply the number in his right-hand by an odd number, and the number in his left-hand by an even number, and tell you if the fum of the products added together be odd or even. If it be even, the even number is in the right hand; but if it be odd, the even number is in the left hand.

Their fem 68
$\left.\begin{array}{l}\text { 2. Number in the } \\ \text { righr hand }\end{array}\right\} 7$ In the left 18 Multipliers 32 $2 \pi \quad-\quad 36$ 35
Their fum 57

To tell 38
16. To tell, by the dial of a watch, at what bour any perfon intends to rife. Let the perfon fet the hand of the dial to any hour he pleafes, and tell you what hour that is; and to the number of that hour you add, in your mind, 12. Then tell him to count privately the number of that amount upon the dial, beginning with the next hour to that on which he propofes to rife, and counting backwards, firt reckoning the number of the hour at which he has placed the hand. An example will make this plain.

Suppofe the hour at which he intends to rife be 8 , and that he has placed the hand at 5 . You add 12 to 5 , ald tcll him to count 17 on the dial, firft reckon-
ing 5, the hour at which the index ftands, and counting backwards from the hour at which lie intends to rift; and the number 17 will neceffarily end at 8 , which fhows that to be the hour he chofe.

That the hour at which the counting ends muft be that on which he propofed to rife, will be evident on a little reflection; for if he had began at that hour and counted 12, he would neceffarily have come to it again ; and calling the number 77 , by adding 5 to it. only ferves to difguife the matter, but can make no fort of difference in the counting.
17. If the number in be multiplied by any one of The magithe nine digits, the two figures of the product will al-cal centary, ways be fimilar. As follows :

$$
\begin{array}{rrrrrrrrr}
11 & 11 & 11 & 11 & 11 & 11 & 11 & 11 & 11 \\
1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 \\
\hline 11 & 22 & 33 & -44 & 55 & \frac{9}{65} & \frac{77}{88} & 99
\end{array}
$$

Place a parcel of counters on a table, and propofe to any one to add, alternately, a certain number of thofe counters, till they amount to roo, but never to add more than to at a time. You tell him, moreover, that, if you flake firtt, he fhall never make the even century, but you will. In order to which, you mult firt take $x$, and remembering the order of the above feries, 11, 22, 33, \&c. you conflantly add, to what he fakes, as many as will make one more thau the numbers of that ferics, that is, as will make 12 , 23, 34, \& c . till you come to 89 , after which the other party cannot make the century himfelf, nor prevent you frem making it.

If the other party bas no knowledge of numbers. you may ftake any other number firf, under ten, provided you take care to fecure fome one of the lat terms as $56,67,78$, \&c.

This deception may be performed with other numbers; and in order to fucceed, you naut divide the number to be attained by a number that has one digit more than what you can Itake each time, and the remainder will be the number you mult filt ftake Obferse, that, to be fure of fuccefs, there mult be alwayza remainder. Suppofe, for example, the number to be attained is 52 , making ufe of a pack of cards inflead of counters, and that you are never to add more than 6 ; then divide 52 by the nest number above 6 , that is, by 7 , and the remainder, which is 3 , will be the number you muft flake firft; and whatever the other ftakes, you muft add as much to it as will make it equal to the number by which you divided, that is, 7. Therefore, if his firft ftake be 1 , you muft ftake 6 , \&zc. Fo that your fecond llake will make the heap 10, your third fake will make it 17 , and fo on, till you come to 45 , when, as he cannot dake more than 6 , you mult make the number 52 .

In this, as in the former cafe, if the other perfon has no knowledge of numbers, you may flake any number firlt under 7 ; or you may let him ftake firlt, only taking care to fecure either of the numbers 10 , $17,24,31$, \& 2 . after which he cannot make 52 , if
(s) The jiquor fhould be put in a fort of jar with a narrow neck, that it may not be feen by the company; and you fhould draw the flowers gently out, that the liquor may drop if thin, and they may have time to asquire their colours.
(o) The fponge fhould be well cleaned immediately after the experimento

## $\begin{array}{lllllllllll}\mathrm{L} & \mathrm{E} & \mathrm{G} & \mathrm{E} & \mathrm{R} & \mathrm{D} & \mathrm{E} & \mathrm{M} & \mathrm{A} & \mathrm{l} & \mathrm{N} .\end{array}$

him then add the number of the joint; and, laftly, to
you coriftantly add as many to his flake as will make it 7.
Totell ber a per- bid himber. AFTER the perfon has nixed on a number, fon private. ly fixes on.

To tell the number of
points chrown up by 3 dice, without fee ing them. the whole by 5 ; to the product let hina add 12 , and multiply the amount by 10. From the fum of the whole let him deduct 320 , and tell you the remainder; froms which if you cut off the two laft figures, the number that remains will be that fixed on.

## Example.

Let the number chofen be - - 7

Which doubled is - - - 14 | And 4 added to it, makes - - - $\quad 180$ |
| :--- |
| Which multiplied by 5, gives | To which 12 being added, it is - 102 That multiplied by 10 , makes - $\quad 1020$ From which deducting 320, the remainder is 700 And by ftriking off the two cyphers, it becomes the original number

19. Three dice leing thrown on a table, to tell the number of each of then, and the order in which they fland. Let the perfon who has thrown the dice double the number of that next his left hand, and add 5 to that fum ; then multiply the amount by 5 , and to the product add the number of the middle die; then. let the whole be multiplied by 10 , and to that product add the number of the third die. From the total let there be fubtracted 250 , and the figures of the number that remains will anfwer to the points of the three dice as they fland on the table.
Example. Suppofe the points of the three dice thrown on the table to be 4,6 , and 2 ,
Then the double of the firlt die will be
To which add - - - 5

That fum multiplied by 5 will be
To which add the number of the middle die
the whole join 35 .
He is then to tell you the amount of the whole, from which you are to fubtract 3535 , and the remainder will confilt of four figures, the tirlt of which will exprefs the rank in which the perfon ftands, the fecond the hand (the number ifignitying the right hand, and 2 the left), the third number the finger, and the fourth the joint.
Example. Suppofe the perfon who flands the third in order thas put the ring upon the fecond joint of the thumb of his left hand; then
The double of the rank of the third perfon is 6 To which add 5

Multiply the fum by

## To which add

 55And the number of the left hand

## Which being multiplied by

To which add the number of the thumb

And multiply again by
Then add the number of thic joint ..... 6710
And lafly the number ..... 35
From which deducting ..... 6747
The remainder is3535
Of which, as we have faid, the 3 denotes the thirdperfon, the 2 the left hand, the 1 the thumb, and the lait 2 the fecond joint.
21. Cover the outfide of a fmall memorandum book The bern with black paper, and in one of its infide covers make writing re a flap, to open fecretly, and obferve there mult be no- flored. thing over the flap but the black paper that cover sthe book.

Mix foot with black or brown \{oap, with which rub the fide of the black paper next the flap; then wipe it quite clean, fo that a white paper preffed againft it will not receive any mark.

Provide a black-lead pencil that will not mark without preffing hard on the paper. Have likewife a fmall box, about the fize of the memorandum-book, and that opens on botb fides, but on one of them by a private method. Give a perfon the pencil, and a nip of thin paper, on which he is to write what he thinks proper : you prefent him the memorandum-book at the fame time, that he may not write on the bare board. You tell him to keep what he writes to himfelf, and direct him to burn it on an iron plate laid on a chafingdifh of coals, and give you the afhes. You then go into another room to fetch your magic box above defcribed, and take with you the memorandum-book.

Having previounly placed a paper under the flap in the cover of the book, when be preffes hard with the
pencil,
pencil, to write on the paper, every Iroke, by means of the ftuff rubbed on the black paper, will appear on that under the flap. You therefore take it out, and put it into one fide of the box.

You then return to the other room, and taking a nip of blank paper, you put it into the other fide of the box, flrewing the afres of the burnt paper over it. Then fhaking the box for a few moments, and at the fame time turning it dexterculfy over, you open the other fide, and how the perfon the paper you firlt put in, the writing on which he will readily acknowledge to be his.
22. Take two guineas and two fhillinge, and grind

The tranfpofable picces. part of them away, on one lide only, fo that they may be but of half the common thickuefs; and obferve that they mult be quite thin at the edge: then rivet a guinea and a fhilling togecher. Lay one of thefe donble pieces, with the fhiling upwards, on the palm of your hand, at the bottom of your three firlt fingers; and lay the other piece, with the guinea upward, in Jike manner, in the other hand. Let the company take notice in which hand is the guinea, and in which the fhilling. Then as you thut your hands, you naturally turn the pieces over; and when you open them again, the fhilling and the guinea will appear to have changed their places.
23. Protide a round tin-box, of the fize of a large fnuff-box; and in this place eight other boxes, which will go eafily into each other, and let the leant of them be of a fize to hold a guinea. Eacla of thefe boxes fhould thut with a hinge: and to the leatt of them there muft be a fmall lock, that is faftened with a fpring, hut cannot be opened without a key: and obferve that ail thefe boxes muft fhut fo frecly, that they may be all clofed at once. Place thefe boxes in each other, with their tops open (fee fig. 12.), in the drawer of the table on which you make your ex. periments; or, if you pleafe, in your pocket, in fuch a manner that they cannot be difplaced.

Then afk a perfon to lend you a new guinea, and defire him 10 mark it, that it may not be changed You iake this piece in one hand, and in the other you have another of the fame appearance; and putting your hand in the drawer yon flip the piece that is marked into the leall box, and, fhutting them all at once, you take them out. Then frowing the piece you have in your hand, and which the company fuppofe to be the fame that was marised, you pretend to make it pafs through the box, and dexteroully convey it away.
You then prefent the box, for the fectators do not get know there are more than one, to any perfon in company; who, when he opens it, finds another, and another, till he comes to the laft, but that he cannot open without the key (fee fig. I3.) which you then give him, and retiring to a diftant part of the room, you tell him to take out the guinea himfelf, and fee if it be that he marked.

This deception may be made more furprifing, by putting the key into the fnuff-box of one of the company ; which you may do by afking him for a pinch of his fnuff, and at the fame time conceal the $\mathrm{k} \in \mathrm{y}$, which mult be very fmall, among the fnuff: and when the perfon who is to open the box afks for the key, you tull him that one of the company has it in his fnuff-
box. This part of the deception may likewife be pcrformed by means of a confederate.
24. ABCD, fig. 15. reprefents a fmall wooden box The three feven or eight inches long, two and an half broad, magicpicand half an inch deep; the bottom of which, turec by means of two croff. pieces, is divided into three Plate equal parts. EFGH reprefents the lid, which is fa- fig. 14, 15.: fiened to the bottom by a hinge, and has in front a fnall plate fhaped like a lock, and two fmall ejes for hooks whicts ferve to faften it when it is fhut. ILM are three fmall flexible fprings, flat, and about $\frac{1}{\frac{1}{2} \text { inch }}$ long. NOP are three wooden tablets of the fame fize, upon which are marked the figures 3 , 4, and 5. The tablets are of different thickneffes, and the difference is fo fmall as not to be perceived by the eye. The out fide of the box is covered with flagreen or morocco leather, and on the infide with filk taffery; thefe coverings bcing indifpenfibly neceflary to hide the three fmall fprings abovementioned. Fig. 14. hows the two hinges $E$ and $F$ bent clofe to the top of the lid ABCD; the piece of brafs $G$, fimilar to a lack, being alfo curved to the lid. A fmall brafs tud is riverted upon the end of each of thefe fprings inferted into the lid, and paffes through the curved part of each of the hinges and the lock; fo that on the outfide they appear as the heads of fmall pins which fallen them upon the lid. Thefe fmall fluds will be elevated more or lefs according to the thickneffes of the tabicts, that may be thut up in each of the partitions in which they may be found placed; fo that the tablet N elevates them more than the tablet $O$, and the latter lefs than $P$; though thefe elevations are but barely fenfible to the fight or touch, and that by a perfon acculomed to look at or handle them. Thus it may be eafily known in whatever order the tablets are placed, however carefuily flut up; and confequently the numbers. named as inclofed.

Give now the box to any indifferent perfon, leave him at liberty to form with the tablets any number he pleafes, defiring him to return the box well thut up; then taking the box, and determining by the touch, or rather by the eye, what order the tablets are in, it will be very furprifing to bear you declare the number without feeing it.
$N$. $B$. It will aill be equally poffible to difcover the number, though the tablets fhould be returned with the bottom upwards, or even though one fhould be withdrawn in order to defeat your defign; particularly if care has been taken to make the fuds remain even with the plates when a number is omitted.
25. To difoover any particular counter whbich bas been The nume fecretly placed ruithin a boov that turns upon it.- This table, rical tableo which is made of wood, is reprefented by A, fig. 16 . It is of an hexagonal fhape, and about three or four inches diameter. For the fake of neatnefs in appearance, a proportionably fized pillar with a foot is fixed to it. Round a centre there turns a fmall round box B of about $\frac{3}{4}$ inch. diameter in the infide, the lid of which takes off at B. At the bottom of this box, near the circumference in the infide, is fixed a brafo. pin to fit a hole made in a flat ivory counter fhown at $b$, fig. ${ }^{17}$. The pin and counter are repretented in fig. is. which is a flat view of fig. 16 with the lid of the box B taken off. Oppofite to the pin $b_{\text {s, }}$,
in the fame figure, $D$ reprefents a fine dot defigned as a fecret mark on the outhide of the box, wthich ferves alyays as a guide to the number of the counter privately placed in the infide of the box, as is afterwards particularly explained. Upon one of the corners of the table is an ivory mark C, fig. 16. and 18. which ferves to place the fpot $a$ upon the counters in its proper pofition. See fig. 17. There are 12 counters fitted to the box B, marked 10, 20, \&kc. as far as 120 , on the midile of eacil. On each of thefe counters is the hole $b$, fig. 17. and 18 . which goes over the pin in the bottom of the box; and on one tide of this hole a red or black fpot is placed in the following manner. When $n^{\circ} 10$ is put into the box, the fput mult be fo far to the left hand of the hole, that when it is brought to the mark C, fig. 18. the hole $b$ will he oppofite to the fide marked 1. When $n^{0} 20$ is put in, the fpot being brought to the mark C will carry the hole to the corner marked 2. When $n^{\circ} 30$ is put in, and the fpot brought oppolite to C , the hule will be brought againit the fide marked 3, as is Shown in the figure, and fo on for the reft. Therefore, as oppofite to the brafs pin, or hole in the counter on the ontfide of the box 1 , there is a fecret mark I) already mentioned, this muft ferve as an index to the number contained in the box, according as it is oppofite to a fide or corner of the table.

Give now the table with the box and the 12 counters to any perfon, and defire him to put one of the counters fecretly into the box, keeping the reft to himfelf; and, after having placed the hole over the pin in the box, to place particularly, by turning the box round, the fpot $a$ againit the mark C on the table. Let him then cover the box, give you the table, and keep the counters to himfelf. Obferve then privately what fide or corner the fecret outfide mark D Itands againft, reckon the tens accordingly, and tell him the number.
26. To draw out of the well wuith a lucket any one of four liquors swhich have been previoully mixed and put into it.-Provide two tin cylinders of leven or eight inches height ; the diameter of the largeft, reprefented by $A B$ fig. 19. to be four inches, and that of the leaft, CD , two inches. Place the fmall one within the larger, and connect them together by foldering to them four tin partitions, making the equal fpaces e, $f, g, b$. Turn a piece of wood three inches thick, hollow withinfide, and lined with tin, of which a fection is giver, lig. 20. Into this the exterior cylinder fhould be clofely fitted 2t $a$ and $b$. Another circle of wood (of which a fection is given fig. 21.), hollowed at $a, b$, and $c$, is alfo to be procured, and which may cover exactly the fpace between the two cylinders; and, laftly, let the whole be conftructed in fuch a manner, that when thefe three fe: parate pieces are placed together, they may reprefent a well, as in fig. 22. The two l.afs or wooden pillars AA, with the axis and handle C, ferve to let down and draw up a fimall giafs bucket $B$, an inch and an half in diameter. Make alfo four tin refervoirs of the fame height with the cylinder, and fo fhaped as to fill the four fpaces $e, f, g, b$, (fig. 19.) which mult be well clofed at their extremities B and C. On the tep of each nake a fmall hole about the tentb part of an inch diameter, and folder at the bafe C a fmall tube $D$, the end of which fhould be bent towards the infide
of the well when the refervoir is placed in it. Solder on the top of each relervoir a fmall fpring lever and prop AB1)E, fig. 23. This fpring will ferve always to prefs the end of the lever $D$ down upon the hole at the top of the refervoir 13 ; and in order to cover it more perfectly, a finall piece of leather is to be ghed on to the end uf th: lever D. Latly, a fmall peg or Rud C is placed at the end of each of the levers, and which muft be clofe to the under pait of the wooden circle which covers the refervoirs. To conceal thefe Atuds, and at the fame time to be able to prefs upon them with the fingers, circular apertures, as fhown in fig. 21. mult be made in the piece of wood, the top covered with a piece of vellum, and the whole neatly painted with oil culour.

If now you plange one of thefe refervoirs perpendiculaly into any liquor, in preling on the flud, fo as to uncover the hole at the top, it will be filled with the liqnor in proportion to the depth to which it. is imnerged; and as long as the lever consinues to prels upon the hole by means of the fpring, the liquor cannot run out for want of air, thongh it will do fo the moment the flud is preffed upon and the air admitted. If the refervoir is propelly placed, then the liquor will flow out of it into the glais-bucket when let down to a proper depth.

Fill now the four refervoirs with the four different liquors; putting them in their places, and covering them with the circular top. Take a quantity of the fame liquors, mix them well together, and pour the whole into the well ; after which you may draw out any one which the company defires, by letting down the bucket, and prefing fecretly, upon the !lus belonging to the refervoir which contains it, and which will thus difcharge the liquor it contains.
27. Provide a fmall tin mortar, that is double, as The refulchA (fig. 8.), whofe bottom B turns round on an axis, tated flowby means of a fpring which commúnicates with the er piece C. There mult be a hollow space under the falle bottom. To the under lide of the bottom faflen, by a thread of fine filk, a flower, with its tialk and leaves.

Then take a flower that exactly refembles the other, and plucking it from the flalk, and all the leaves from. tach other, put them into the mortar, and pound them with a fmall pefte; after which you flow the mortar to the company, that they may fee the parts are all bruifed.

Then taking the mortar up in you hands, you hold it over the flame of a lamp or candle, by whofe warmth the flower is fuppofed to be reftored; and at the fame time prelfing the piece at C , the bottom will turn round, the bruifed parts defcend into the face under the bottom, and the whole flower will be at top: you then put your hand into the mortar, and eafily break. ing the filk thread, which may be very flort as well as fine, you take the flower out and prefent it to the company.

There is an experiment funilar to this, in which a live hird is concealed at the bottom of the mortar, and one that is dead is pounded in it; after which, by the motion of the bottom, the live bird is fet at liberty. But furely the pounding a bird in a mortar, though it be dead, mult produce, in perfons of any delicacy, more difgult than entertainment.

L E G E R The lumi- 2 28. Procure a tin box ABCD (fig. r.) about eight
ous oracle. inches high, fonr wide, and two deep, and let it be fixed on the wooden Aland E . On two of the inlides let there be a groove FG; and in the front an opening I, three inches wide and one high.

At the back of the box let there be a little tin-door, that opens outward, by which two wax candles $M$ may be put in. Let the top of the box have a cover of the fame metal, in which there are feveral holes, and whick may be taken off at pleafise.

Provide a double glafs. OP (fig. 2.) contructed in the fame manner as that in the lait experiment. On one of its fides you are to pate a black paper, the length of which is to be divided into three parts, and the breadth into fifteen; in every two of thefe fifteen divifions you cut out letters, which will make in the whole three arfiwers to three queftions that may be propoled. On the other fide of the glafs patte a very thin paper, and to the top falten a fmall cord, by which they may be made to rife or defeend in the groove FG .
Then take a nlip of pafteboard RS (fig. 3.), one inch and a half wide and three inches long, which is to be divided into fifteen equal parts fimilar to thofe of the paper OP, and cut out fpaces, as in the figure, fo that this paper, fliding heiizoutally before OP, will either cover or conceal the letters cut in that.
This palleboard is to ilide between two brafs wires, and is to be fatlened to one fide of the box, by a thing that communicates with a fmall brafs fpring; and to the other fide, by a fring fattened to the box by a fmall piece of wax, fo lituated that the flring may be eafily fet at liberty by the heat of the candles placed in the box.

Take a pareel of eards, and write on them different queftions, three of which are to correfpond with the anfwers on the glafs. Shuffe thefe cards, and let a perfon draw any one of the three quellions. Than by raifing the glafs you bring the anfwer againft the hole
in the front of the hox. You nest place the candies in the box, the heat of which will melt the wax that holds the paper Rs, which being then drawn by the fpring, the anfwer will be vilible; and in proportion as the compofition between the glaffes becomes diluted by the increafe of the heat, the letters will become more itrongly illuminated.

The letters cut in the paper may be made to anfwer feveral different queftions, as has been explained in other experiments; and the whole parcel of cards may confill of quettions that may be anfwered by one or other of the three divifions in the paper.
29. Make a tin box ABCD (fig. 4.), with a co- A flowee ver M, that takes off. Let this box be fupported by produced the pedeftal FGHI, of the fame metal, and on which from iss there is a little door L . In the front of this box is to be a glafs O .

In a groove, at a fmall diftance from $O$, place a double glafs of the fame fort with that in the latt experiment. Between the front and back glaffes place a fmall upright tin tube fupported by the crols-piece R. Let there be alfo a fmall chafingdith placed in the pedeftal FGHI. The box is to be of behind. You privately place a flower (Q) in the tin tube R ; and prefenting one that refembles it to any perfon ( $R$ ), defire him to burn it on the coals in the chating-difh.

You then trew fome powder over the coals, which may be fuppofed to aid the afhes in producing the flower; and then put the chafingdifh in the pedellal? under the box. As the heat by degrees melts the compofition between the glaffes, the flower will gradually appear; but when the chatingdifh is teken away, and the power of the athes is fuppofed to be removed, the flower foon difappears.

For entertaining experiments, illufions, \&c. of a philofophical nature, fee the articles Acoustrics, Catoptrics, Chromatics, Dioptrics, Elegtricity, Hydrostatics, Magnetism, Pyrotechnics, \&e.

egerline,
Leghon, LEGER-LINE, in mufic, one addee to the flaff of five lines, when the afcending or defcending notes run very high or low : there are fometimes many of theie lines both above and below the faff, to the number of four or five.

LEGHORN, anciently called Liburnus Portus, but by the modern Italians Livorno, a handfome town of Italy, in the duchy of Tufcany, and a frce port, about 30 miles fouth weft from Florence, in the territory of Pifa. The only defect of the harbour is its being too fhallow for large flips. Cofmo I. had this town in exchange for Sarzana, from the Genoefe; and it is the only fea-port in the duchy. It was then but a mean unhealthy place; but is now very handfome, and wellbuilt, with broad, Hraight, parallel Itreets. It is alio well fortified; but wants good water, which mult be

## L E G

brought from Pifa, 14 miles difant. It is about $\Sigma$ Leghots. miles in circuit, and the general form of it is fquare. $\underbrace{\text { Leghes }}$ Part of it has the convenience of canals; one of which is 5 miles in length, and, joining the Arno, merchandife and paffengers are thus conveyed to Pifa. The port, confiting of two havens, one for the duke's gatleys, and the other for merchant hips, is furtounded with a double mole, above a mile and a half in length, and defended, togetler with the cown, by a good citadel and 12 forts. Roman Catholics, Jews, Greeks, Aimenians, Mahometans, and even the Englih factory, are indulged in the public exercife of their religion; but other Proieftants mult be fatisfied with the private. 'The rrade carried on here is very great, and moit of it paffes through the hands of the Jews. 'Ihough only two piaftres, or โeudi, are paid for every bale.
(a) This flower muft not be placed fo neas as to make it in the leaft degree vifible.
(R) You may prefent feveral flowers, and let the perfon choofe any one of them. In this cafe, while he is burning the flower, you fetch the box from another apartment, and at the fame time put in a correfponding Bower, which will make the experiment fill more furprifing.

## L E G [ 776 ]

## L. E G

Leghorn bale, great or fmall, imported or exported, yet the duties on all provifions and commodities brought from the continent to the town are very heavy. The num-
ber of the inhabitants is faid to be about 45,000 ; and one third of thele are Jews, who live in a particular quarter, but without any mark of diftinction, and have a fine fynagogue. They have engroffed the coral manufactory, have a confiderable trade, and poffefs the chief riches of the place. The garrifon confits of zoco men. The walks on the ramparts are very agretable. There is good anchorage in the road; but hlips riding there are much expofed to the weather and the Barbaty corfairs. The number of Englifh families in Leghorn are about 36 ; they arc much favoured by the government, and carry on a good trade. The power of the inquifition is limited to ceclefiaftical matters and Roman Catholics. Chere are a great many Turkih laves here, brought in by the duke's galleys, who are often fent out on a cruize againft the corfairs of Barbary. The lighthoufe flands on a rock in the fea; near which is the Lazaretto, where quarantine is performed. A nother fource, from which the duke draws a great revenue, is the monopoly of brandy, tobacco, and falt; but that, with the heavy duties, makes provifions dear. The 'Turks, who are not flaves, live in a particular quarcer, near that of the Jews. The common profitutes alfo have a particular place affigned them, out of which they mult not be feen, without leave from the commiffary. The uumber of the rowers in the galleys, whether Turkifh flaves, criminals, or volunteers, are about 2000. In the area before the darfena or inner harbour, is a fine ttatue of Duke Ferdinand, with four Turkifh flaves, in bronze, chained to the pedeftal. The ducal palace is one of the fineft Aructures in the town, and the ordinary relidenee of the governor. Leghorn is the fee of a bifhop, and has a noble cathedral; but the other churches are not remarkable. E. Long. 11.0. N. Lat. 43. 30.

LEGIO VII. Gemina, (anc. geog.) a town or flation of that legion in the Aftures. Now Leon, capital of the province of that name in Spain. W. Long. 6. 5. Lat. 43.-Another Legio, a town of Galilee ; from which Jerome determines the diftances of the plaees in Galilee; not a bare encampment, though the name might originaliy be owing to that circumflance; it lay 15 miles to the weft of Nazarcth, between mount 「abor and the Mediterranean. Now thought to be Legune.

LEGION, in Roman antiquity, a body of foot which confifted of different numbers at different periods of time. The word comes from the Latin legere, to choofe; becaule, when the legions were raifed, they made choice of fuch of their youth as were mof proper to bear arms.

In the time of Romulus the legion confited of 3000 foot and 300 horfe; though, after the reception of the Sabines, it was angnented to 4000 . In the war with Hannibal, it was raifed to 5000, after this it funk to 4000 or 4500; this was the number in the time of Polyhius. The number of legions kept in pay toge ther, differed according to times and occafions. Duriog the confular ftate four legions were fitted up every year, and divided betwixt the two confuls; yet we meet with the number of 16 or 18 , as the fituation of N'iso.
affairs required. Auguftus maintaincd a ftanding ar- Legion, my of 23 or 25 legions; but this number in after times Legilator. is feldom found. The different legions borrowed their names from the order in which they were raifed; hence we read of legio prima, fecunda, tertio: but as there might be many prime, fecunsic, tertia, Ejc. they were furnamed from the emperors, as Augula, Claudiana, Galbiana, Flavia, Ulpia, Trajana, Antoniana, \&c. or from the provinces which had been conquered by their means, as Paribica, Scythica, Gallica, Arabica, \&c. or from the deities under whofe protection the commanders had particularly placed themfelves, as Minervia, Apollinaris, \&c. or from the region where they wese quartered, as Cretenis, Cyrenaica, Britannica, \&c. or from particulat accidents, as adjuirix, martia, fulmivatrix, rapax, viarix.

Each legion was divided into 10 cohorts, each cohort into 10 companies, and each company into two centuries. The chief commander of the legion was called legatus, i. e lieutenant.

The flandards borne by the legions were various; at firf, the ftandard was a wolf, in honour of Romulus's nurfe; afterwards an hog, which animal was ufually facrificed at the conclufton of a treaty, to indicate that war is underiaken with a view to peace; fonetimes a minotaur, to remind the general of his duty of fecrecy, of which the labyrinth was an emblem, and confequently the minotaur ; a horfe was alfo borne, alfo a boar; and Marius, we are told, was the firt who changed all thefe for the eagle.

LEGISLATOR, a lawgiver, or perfon who eltablifhes the polity and laws of a fate. Such was Mofes, among the Jews; Lycurgus, among the Lacedemonians, \&c. Scc Mosaic Law.
'The firlt laws amongt the Athenians feem to have been thofe of Thefeus; for what we can find earlier than this period is involved in fable. After Thefeus came Draco the Archon, whofe laws were faid, for their feverity, to have been written with blood: by his laws every offence was punifhed with death; fo that flcaling an apple, and betraying their country, were treated as equal crimes. Thefe laws were afterwards repealed by Solon, except fuch as related to murder:
 and Sulon's Noнos. The laws of Solon were in a great meafure fufpended during the ufurpation of Pififtratus; but, after the expulfion of his famıly, were revived with fome additions by Clithenes. After this, the form of government was again changed, firf by the four hundred, and afterwards by the thirty tyrants; but thefe ftorms being over, the ancient laws were again reftored in the Archonthip of Euclides, and others ellablithed at the infance of Diocles, Ariltophon, and, laft of all, of Demetrius the Phalerian. This is a fhort fleteh of the hittory of the Athenian legiflation, before that ftate fubmitted to the Roman yoke. But many laws were enacted by the fuffrages of thic people on particular exigencies; the decrees of the fenate continued to have the force of laws no longer than a year. If a new law was to be propofed to the affembly it was neceffary to write it upon a white tablet, and lix it up fome days before the meeting, $l=\{t$ their judsment thould be caught by furprife. The laws were carefully revifed cvery year; and if any of then, from a change of circumftances, were found unfuitable or pre-

Legitima- prejudicial, they were repealed: This was called
by holding up of hands. The firft laws amonglt the Grecians were unwritten and compofed in verfe, that the common people might with more eale commit them to memory. Solon penned his laws upon wooden tablets, called $A$ goves; and fome authors with great probability affert, that they were written in the manner called Eus fopuscr, from left to right, and from right again to left, in the fame manner as oxen walk the fursows in plowing thus,

> EKAIOS AP
> VQZ3HVx

It was again!t the law for any perfon to erale a decree,
 to prevent any corruption; whofe bufinefs it was alfo to tranferibe the old and enter the new ones.

At Rome the people were in a great meafure their own leginators; though Solon may be faid, in fome ferfe, to have been their leginator, as the decemviri, who were created for the making of laws, borrowed a great number from thofe of Solon. See Lex.

With us the legillative power is lodged in the king, Iords, and commons a!tembled in parliament. See Law and Parliament.

LEGITIMATION, an act whereby illegitimate children are rendered legitimate. Sce Bastard.

LEGITIME, in Scots la:v, that fhare of the move. able effects belonging to a hubband and wife, which upon the hufband's death falls to the children.

LEGUMEN, or Pod, in botany ; a fpecies of feedveffel which has two valves or external openings inclofing a number of ferds that are fattened along one future only. In this laft circumftance the feed-veffel in queftion diflers from that termed by botanits fligua, in which the incloled feeds are fattened alternately to both the futures or joinings of the pod.

The feed-veftel of all the pea bloom or butterflymaped Alowers, the riadelphia of Linnous, is of this pod kind. Such, for inflanee, is the feed-veffel of the pea, vetch, lupine. and broom.

LEGUMINOUS, an appeilation given to all plants whofe fruit is a legunen.

LEIBNIfZ (Godfrey William-de), an eminent mathenatician ancs plilofopher, was born at Leipfic in Suxnny in 1646 . At the age of 15 years, he applied himfelf to mathemarics at Leipfic and Jena; and in 1063, maintained a theis de Principris Indizvidationis. The year following he was admitted malter of arts. He read with great aitention the Greck philofophers; and endeavoured so reconcile Plato with Arifoile, as he afterwards did Arillote with Des Cartes. But the fudy of the law was his principal view ; in which faculty he was adnitted bachelor in 1665 . The year following he would have taken the degree of doctor; but was refired it on pretence that he was too young, thengh an reality becanfe he had raifed himfelf feveral entmies by rejcering the principles of Araltotle and the fchoolmen. Upon this he went to Altorf, where he maintained a thefis de Cafius Perplexis, with fuch applaufe, that he had the degree of doctor confened on him. He might have fettled to great advantage at Paris; but as it would have been necefary to have embraced ile Roman Catholic religion, he refufed all oficts. In 16:3, he went to England; where be becarne acquainice with Mr Oldenburg, fecretary of Vor. IX. Patt Id.
the royal fociety, and Mr John Colling, fellow of that fociety. In 1676, he teturned to England, and thence went into Holland, in order to proceed to Hanover, where he propofed to fetele. Uoon his arrival there, he applied himfelf to enrich the duke's lisbrary with the belt books of all kinds. The duke dying in 1679, his fucceffor Ernef Augutus, then bihop of Olinaburgh, fhowed our author the fame favour as his predecelfor had done, and ordered him to write the hiftory of the houle of Brunfwick. He undertook it, and travelled over Germany and Italy in order to collect materials. The elector of Brandenburgh, af. terwards king of Pruffia, founded an academy at Berlin by his advice; and he was apprinted perpetual prefident, theugh his affairs would not permit him to refide conftantly at Berlin. He projected an academy of the fame kind at I)refden; and this defign would have been executed, if it had not been prevented by the confufions in Polund. He was engaged likewile in a feheme for an univerfal language. His writings had long before made him famous over all Europe: Befide the office of privy-counfellor of juftiec, which the elector of Hanover had given him, the emperor ap. pointed him in 1711 aulic counfellor; and the czar made him privy counfetlor of juftice, with a penfion of 1000 ducats. He undertook at the fame time the eftalithment of an academy of fcienes at Vienna; but the plague prevented the execution of it. How ever, othe emperor, as a mark of his favour, Cettled a penfion on him of 2000 fiorins, and promifed him another of 4000 if he would come and refide at Vienna. He would have complied with this offer, but he was prevented by death in 1716 . His memory was fo Itrong, that in order to fix any thing in it, he had no more to do but to write it once; and he could even in his old age repeat Virgil exactly. He profefled the Lutheran religion, but never went to fermon; and upon his death bed, his coachman, who was his favourite fervant, defiring him to fend for a minitter, he refufed, faying, be bad zo need of one. Mr Locke and Mr Molyneux plainly feem to think that he was not fo great a man as he had the reputation of being. Foreigners did for fome time afcribe to him the honour of an invention, of which he received the firt hints fivm Sir Ifaac Newton's letters, who had difcovered the method of fuxions in $166_{4}$ and 1665. But it would be tedious to give the reader a detail of the difpute conecrning the right to that invention.

LEIBNITZIAN philofophy, or the phikrophy of Leibnitz, is a fyltem of philoloplyy formed and publimed by its aushor in the laft century, partly in emendation of the Cartelian, and partly in oppofition to the Newtonian. The bafis of Mr Leibnitz's philofoplyy was that of Des Cartes; for he retained the Cartelian fubtile matter, with the unverfal plenitude and vortices; and reprelented the univerie as a machine that fhould proceed for ever by the laws of mechanifm, in the moll perfcet Rate, by an abfolute inviolable neceffity, though in fome things he differs from Des Cartes. Alter Sir Ifaac Newton's philofophy was publined in 1687 , he printed an eflay on the celeftial motions, Act. Erud. 1689, where he admits of the circulation of the ether with Des Cartes, and of gravity with Sir llaac Newton; though he has not reconciled thefe principles, nor hown how gravity arofe from the $5 F$
impulfe  .

## L E I

Leibnit- impulfe of this ether, nor how to account for the plazian. netary revolutions, and the laws of the planetary mo-
tions in their refpective orbits. That which he calls the barmonical circulation, is the angular velocity of any one planet, which decreafes fron the perihelium to the aphelium in the fame proportion as its diftance from the fun increales; but this law does not apply to the motions of the different planets compared together; becaufe the velocities of the planets, at their mean difances, decreafe in the fame proportion as the fquare roots of the numbers expreffing thofe diftances. Befides, his fyltem is defective, as it does not reconcile the circulation of the ether with the frce motions of the comets in all directions, or with the obliquity of the planes of the planetary orbits; nor refolve other objections to which the hypothetis of the plenum and vortices is liable. Soon after the period jult mentioned, the difpute conmenced concerning the invention of the method of fluxions, which led Mr Leibnitz to take a very decided part in oppolition to the philofophy of Sir Ifaac Newton. From the wifdom and gooduefs of the Deity, and his principle of a fufficient reafon, heconcluded that the univerfe was a perfect work, or the beit that could polfibly have been made; and that other things, which were incommodious and evil, were permitted as neceffary confequences of what was beft : the material fyltem, confidered as a perfect machine, can never fall into difotder, or require to he fet right ; and to fup. pofe that Gud interpules in it, is to leffen the kill of the author, and the perfection of his work. He exprefsly charges an impious tendency on the philofoply of Sir Ifaac Newton, becaule he afferts, that the fabric of the univerfe and courfe of nature could not continue for ever in its prefent flate, but would require, in procels of time, to be re-ellablifhed or renewed by the hand of is Former. The perfection of the univerfe, by reafon of which it is capable of continuing for ever by mechanical laws in its prefent date, led Mr Leibnitz to diftinguin between the quantity of motion and the force of bodies; and, whilt he owns, in oppofition to Des Cartes, that the former varies, to maintain that the quantity of force is for ever the fame in the univerfe, and to meafure the forces of bodies by the fquarts of their velocities.

This fyltem alfo requires the utter exclufion of atoms, or of any perfectly hard and inflexible bodies. The advocates of it alledge, that according to the law of continuity, as they call a law of nature invented for the fake of the theary, all changes in nature are produced by infenfible and infinitely fmall degrecs; fo that no body can, in any cale, pals from motion to relt, or from rell to motion, without pafling through all poffible intcrmediate degrees of motion: whence they con. clude, that atoms or perfectly hard bodies are impolfible: becaufe if two of them fhould meet with equal motions, in contrary directions, they would neceffarily flop at once, in violation of the law of continuity.

Mr Leibnitz propofes two principles as the foundavion of all our knowledge ; the firf, that it is impoffible for a thing to be and not to be at the fame time, wbich, he fays, is the foundation of fpeculative truth: the other is, that nothing is without a fufficient reafon why it thould be fo rather than otherwife; and by this principle, according to him, we make a tranfition from abltracted truths to natural philofophy. Hence
he concludes, that the mind is naturally determined, Leibni in its volitions and elections, by the greatelt apparent good, and that it is impolible to make a choice between things perfectly like, which he calls indifermilles; from whence he infers, that two things perfectly like could not have been produced even by the Deity : and he-rejects a vacuum, partly becaufe the parts of it mult be fuppofed perfectly like to each other. For the fame reafon he alfo rejects atoms, and all fimilar particles of matter, to each of which, though divifible in infinitum, he afcribes a manad (Act. Lipfiz 1698 , p. 435 .) or active kind of principle, endued, as he fays, with perception and appetite. The effence of fubtance he places in action or activity, or, as he expreffes it, in fomething that is between acting and the faculty of acting. He affirms abfolute relt to be impoffible, and holds motion, or a fort of nifus, to be effential to all material fubftances. Each monad he deferibes as reprefentative of the whole univerfe from its point of fight; and after all, in one of his letters he tells us, that matter is not a fubllance, but a fubfantiatum, or phenomené bien fonde. He frequently urges the comparifon between the effeets of oppofite motives on the mind, and of weights placed in the fcales of a balance, or of powers acting upon the fame body with contrary directions. His learned antagonif Dr Clarke denies that there is a fimilitude between a balance moved hy weights, and a mind acting upon the view of certain motives; becanfe the one is entirely palfive, and the other not only is acted upon, but acts alfo. The mind, he owns, is purely paffive in receiving the impreffion of the motive, which is only a perception, and is not to be confounded with the power of acting after, or in confequence of, that perception. The difference between a man and a machine does not confit only in fenfation and intelligence, but in this power of acting alfo. The balance, for want of this power, cannot move at all when the weights are equal ; but a free agent, he Cays, when there appear two perfectly alike reafonable ways of aعting, has till within itfelf a power of chooling; and it may have flrong and very good reafons not to forbear.

The tranflator of Mofheim's Ecclefialtical Hiftory oblerves, that the progrefs of Arminianifin has declined in Germany and feveral parts of Switzerland, in confequence of the influence of the Leibnitzian and Wolfian philofophy. Leibnitz and Wolf, by attacking that liberty of indifference, which is fuppofed to imply the power of afting not only without, but againft, motives, flruck, he fays, at the very foundation of the Arminian fyltem. He adds, that the greatelt polfibleperfection of the univerfe, confidered as the ultimate end of creating goodnefs, removes from the doctrine of predeltination thofe arbitrary procedures and narrow views with which the Calvinills are fuppofed to have loaded it, and gives it a new, a more pleafing, and a more philofophical afpect. As the Leibnitzians laid down this great end as the fupreme object of God's. univerfal dominion, and the hope to which all his difpenfations are direeted; fo they concluded, that if this end was propoled, it muft be accomplifhed. Hence the doctrine of neceffty, to fulfil the purpofes of a predeftination founded in wifdom and goodnefs; a neceffity, phyfical and mechanical, in the motions of ma. terial and inanimate things, but a neceflity moral and. fpiritual
icefter. fpiritual in the voluntary determinations of intelligent beings, in confequence of propellent motives, which produce their effects with certainty, though thefe effects be contingent, and by no means the offipring of an abfolute and effentially immutable fatality. Thefe prineiples, fays the fame writer, are evidently applicable to the main doctrines of Calvinifm; by them predellination is confirmed, though modified with refpect to its reafons and its end ; by them irrefiltible grace (irrefiftible in a moral fenfe) is maintained upon the hypothefis of propellent motives and a moral neceffity : the perfeverance of the faints is alfo explicable upon the fame fyttem, by a feries of moral caufes producing a feries of moral effeets.
${ }^{\top}$ EICESTER, the capital of a county of the fame name in England, upon the river Leire, now called Soare. From its firuation on the Foffe-way, and the many coins and antiquities difcovered here, it feems probable that it was a place of fome note in the time of the Romanz. In the time of the Saxons it was a bifhop's fee, and afterwards fo repaired and fortified by Edelfida, thai it became, according to Matthew Paris, a molt wealthy place, having $3^{2}$ parifh-churches; but in Henry the Second's reign it was in a manner quite ruined, for joining in rebellion againft him with Robert earl of Leicefter. In the reign of Edward III. however, it began to recover by the favour of his fon Henry Plantagenet, duke and earl of Lancafter, who founded and endowed a collegiate church and hofpital here. It is a barough and corporation, governed by a mayor, recorder, Heward, bailiff, 24 aldermen, 48 common-eouncii men, a folicitor, a town-elerk, and two chamberlains. It had its firf charter from king John. The freemen are exempt from paying toll in all the fairs and markets of England. It has three hofpitals, that mentioned above, built by Henry Plantagenet duke of Lancafter, and capable of fupporting 100 aged people decently; another erected and endowed in the reign of Henry VIII. For 12 poor lazars; and another for fix poor widows. The caftle was a prodigious large building, where the duke of Lancafter kept his court. The hall and kitchen fill remain entire, of which the former is very fpacious and lofty; and in the tower over one of the gate-ways is kept the magazine for the county militia. There was a famous monaflery here, anciently called, from its fituation in the meadows, St Mary de Pratis or Prez. In thefe meadows is now the courie for the borfe-race. It is faid that Richard III. who was killed at the battle of Bofworth, lies interred in St Margaret's church. The chief bufincis of Leicefter is the Alocking-trade, which hath produced in general to the amount of $60,000 \mathrm{l}$. a year. In a parliament held here in the reign of Henry V. the firt law for the burning of heretics was made, levelled againtt the followers of Wickliffe, who was rector of Lutterworth in this county, and where his pulpit is faid fill to remain. The town fuffered greatly in the civil wars, by two fieges upon the back of one another. It has given the title of earl to feveral noble families. The prefent earl was created in 1784 , and is the marquis of Townfhend's fon. Its market on Saturday is one of the greatelt in England for provifions, efpecially for corn and cattle ; and it has four fairs in the year.

Leicestershire, an inland county of England, in Leiceflezform almoft circular. It has Nottinghamfire and Derby thire to the north; Rutlandfhire and Lincolnthire on the ealt; Warwickflire on the weft, from which it is parted by the Roman military way called Watling.freet; and by Northamptonfhire on the fouth; and is about 170 miles in circumference. As it lics at a great diftance from the fea, and is free from bogs and marthes, the air is fweet and wholefome. It is a champaign country in general, and abundantly fertile in corn and grafs, being watered by feveral rivers, as the Soure, or Sare, which paffes through the middle of it, and abounds in excellent falmon and other fifh; the Wreke, Trent, Eye, Senfe, Auker, and Aven. Thefe rivers being molly navigable, greatly facilitate the trade of the county. In fome parts there is a great fearcity of fuel, both wood and coal; but in the more hilly parts there is plenty of both, together with great Rocks of Theep. Befides wheat, barley, oats, and peafe, it produces the beft beans in England. They grow fo tall and luxuriant in fome places, particularly about Barton in the Beans, that they look, towards the harvet-time, like a foreft; and the inhabitants eat them not only when they are green, as in other places, but all the year round; for which reafon their neighbours nickname them bean-bellies. They have plenty of very good wool, of which they not only make great quancities of ftockings, but fend a great quantity unmanufactured into other parts of England. They make great profit of their corn and pulfe; and likewife breed great numbers of coach and dray horfes, molt of the gentlemen being graziers; and it is not uncommon to rent grafs-farms from 5001 . to 2000 l. a-year. It is in the midland cireuit, and dioctfe of Lincoln; and fends four members to parliament, two for Leicetter, and two for the county.

LEIGH (Sir Edward), a very learned Englifhman, was born at Shawell in Leicefterhire, and edu. cated at Magdalen Hall, Oxford. He was a member of the long parliament, and one of the members of the houfe of commons who were appointed to fit in the affembly of divioes. He was afterwards colonel of a regiment for the parliament; but in 1648 was numbered among the Prefbyterians who were turned out, and in December he was imprifoned. Froun this period to the Refluration he employed himfelf in writing a confiderable number of learned and valuable books, which Showed profound learning, a knowledge of the languages, and much critical fagacity; and of which a litt is given by Anthony Wood. Sir Edward died at his houfe called Ruhal Hall, in Staffordfhire, June 2. 1678 : and was buried in the chancel of Rufhall chureh.

LEIGHLIN, a town of Ireland, fituated in the county of Carlow, and province of Leinfter; about 43 miles from Dublin, near the river Barrow. It is a borough, and returns two members to parlianent ; patronage in the bifhop of the diocefe, this being a bifhopric united to Ferns. At the eaft end of the church of Old-Leighlin is a famous well covered with great afh trees, and dedicated to St Lafarizn. This place was formerly a city, though now a very mean village, and the cathedral has been kept in good repair. It was a fole bifhopric, founded in 632 , and joined to ${ }_{5} \mathrm{~F}_{2}$

Ferns

Rhire,
Leichlin. $\underbrace{\text { Leighlin. }}$
I.eighton, Ferns in $\mathbf{1 6 0 0}$. It is reported, that Gurmundus a $\mathrm{Da}_{2}$ Leinfler. nih prince was buried in this church. The latt bifhop of Leigblin before its union with Ferns, was the Right Rev. Robert Grave, who coming by fea to be inflalled, fuffered flipwreck in the harbour of Dublin, and perifhed in the waves. This cathedral was burnt to the ground, it is faid, by lightning; and rebuilt, A. D. 1232, then dedicated to St Lafarian or Lazarinus, before-mentioned; fince the fees were joined, it is made ufe of as a parifh-church. Leighlin-bridge is fituated about two miles from this village; it was deftroyed by the Irifh in 1577. Here are the remains of a caftle and of an old abbey. This is a poft town, and has fairs in May, September, and October.

LEIGHTON (Robert), archbihop of Glafgow. During Cromwell's ufurpation, he was minifter of a church near Edinburgli, and dittinguihed himfelf by his charity, and his averfion torcligiousand political difputes. The miniters wese then called over ycarly in the fynod, and were commonly afked, Whether they had preached to the times? "For God's fake (anfwered Leighton), when all my brethren preach to the times, fuffer me to preach about eternity." His moderation, however, giving offence, he retired to a life of privacy. But foon after, he was called by the unanimous voice of the magiftrates, to prefide over the college of Edinburgh; where, during ten years, he difplayed all the talents of a prudent, wife, and learned governor. Soon after the Reftoration, when the ill-judged affair of introducing epifcopacy into Scotland was refolved on, Leighton was confecrated bihop of Dunblane, and immediately gave an inftance of his moderation: for when Sharpe and the other bihhops intended to enter Edinburgh in a pompous manner, Leighton remonftrated againft it; but finding that what he faid had no weight, he left them, and went to Edinburgh alone. Leighton, in his own diocefe, fet fuch a remarkable example of moderation, that he was revered even by the moft rigid of the oppofite party. He went about, preaching without any appearance of pomp; gave all he liad to the poor; and removed none of the minifters, however exceptionable he might think their political principles. But finding that none of the other bifhops would be indaced to join, as he thought, properly in the work, he went to the king, and reingned his bifhopric, telling him he would not lave a hand in fuch oppreffive meafures. Soon after, the king and council, partly induced by this good bifhop's remonflrances, and partly by their own obfervations, refolved to carry on the caufe of epifcopacy in Scolland on a different plan ; and with this view, Leighton was perfuaded to accept of the archbihopric of Glafgow, on which he made one effort more; but finding it not in his power to ftem the violence of the times, he refigned his archbifhopric, and retired into Suffex, where he devoted himfelf to acts of piety. He died in the year 1684 He was of a moft amiable difpofition, ftrict in his life, polite, cheerful, engagiog in his manners, and profoundly learned. He left many fermons and uffeful tracts, which are greatly efteemed.

LEINSTER, the eallern province of Ireland, bounded by Ultter on the north; St George's, or the Irifh Channel, on the eaft and fouth; and by the provinces of Connaught and Munfter on the weft. The capital
city of this province and of the kingdom is Dublin. Leiffe, It contains 12 counties, viz. Carlow, Dublin, Kildare, Kilkenny, King's.county, Longford, Louth, Meath, Queen's county, Weft-meath, Wexford, and Wicklow. It is the mott level and belt cultivated province in the kingdom; containing 2,642,958 Irifh plantation acres, 858 parifhes,. 99 baronies, and 53 boroughs; it is about $12+$ miles long and $7+$ broad, and extends from $51^{\circ} 45^{\prime}$ to $55^{\circ} 45^{\prime}$ north latitude. Dermod king of Leinfler marrying his daughter Eva to Strongbow earl of Pembroke, on his drceafe made him his univerfal heir; whereby the Earl inherited the province of Leinfter, and was afterwards enfeoffd of it by Hen. II. He died in 11:76, and left an only daughter Ifabel, efpoufed to William Marfhal earl of Pembroke; by her he had five fons, who fucceeded to his great eltates in Lciniter. This province gives title of Duke to the ancitut and nohle family of Fitzgerald. In the carly ages, this diftrict was almoft one continued foref, and was principally the feat of the Kinfelagh

LEIPSIC, a large, ftrong, and populons town a Mifnia in Germany, with a caftle, and a famous univerfity. It is neat, and regularly built, and the llreets are lighted in the night ; it carries on a great trade, and has a right to ftop and fell the merchandizes defigned to pafs through it, and the country for 75 miles round has the fame privilcge. There are three great fairs every year; at the beginning of the ytar, Eailer and Michaelmas, which latt 15 days each. There are fix handfome colleges belonging to the univerfity, befides the private colleges. The town-houfe makes an indifferent appearance, but the exchange is a fiue ftructure. The town was taken by the king of Pruffia in the late war, but given up by the peace in 1763 . It is feated in a plain beeween the rivers Saale and Muld, near the confluence of the Playffe, the Eliter, and the Barde. E. Long. 12. 55. N. Lat. 51. 19.

LEITH, (anciently called Inverleith), the port of Edinburgh, is feated on the banks of the Forth, about two miles from the capital. It is built on both fides of the harbour; by which it is divided into two parte, called North and South Leith. The communication between thefe was by a tone-bridge of three arches founded by Robert Ballentyne abbot of Holyrood-houfe in 1493, but lately pulled down. The harbour is formed by the conflux of the rivulet called the $/$ ater of Leith with the Frith of Forth. The depth of water, at ocap-tides, is about nine feet ; but in high fpring-tides, it is about 16 feet. In the beginning of the prefent century, the town-council of Edinburgh improved the harbour at an enormous expence, by extending a fone-pier a confiderable way into the fea. In 1777, they erected an additional fone quay towards its weft fide. Upwards of 100 hips could then lie conveniently in this port: but it can now admit of a much greater number, in confequence of having lately undergone great improvements. In order to enlarge it, the old bridge has been pulled down, and an elegant draw-bridge erected a little to the eaftward of the former fite. It is accommodated with wet and dry docks, and other conveniences for Mhip building, which is there carried on to fome extent, as veffels come to Leith to be repaired from all pats of Scotland. A new bafon and docks

Leith. are propofed to be added; which, when completed, will render this a very capacious, as well as a molt fafe and convenient, flation for traling veffels. And the road of Leith affords good anchorage for fhips of the greatelt fize.

The harbour of Leith was granted to the community of Edinburgh by king Robert in 1329; but the banks of the harbour belonged to Logan of Retlalrig, a turbulent and ambitious baron, from whon the citizens were under the neceffity of purchafing the bank or watte piece of ground between the houfes and the rivulet above mentioned, for the purpofes of wharfs, as well as for erecting fhops and granaries, neither of which they could do before. As the fituation of Leith, however, is much more convenient for trade than that of Edinburgh, which is two miles dilant from the harbour, the inhabitants of the metropolis have fallen upon various methods of reftraining the trade of Leith. They firlt purchafed, from Logan of Reftalrig, an exclufive privilege of carrying on every fpecies of traffic in the town of Leith, and of keeping warehoufes and inns for the entertainment of Itrangers in that place; and in 1483, the town-council prohibited, under fevere penalties, the citizens of Edinburgh from taking into partnerfhip any inhabitant of Leith. To free themfives from this oppreffion, the people of Leith purchaled the fuperionty of their town from Logan of of Reftalrig for 30001 . Scots, and it was erected into a burgh of barony by the queen regent, Mary of Lorraine, who promifed to erect it into a royal borough. She died, however, before this was accomplifhed; and upon her death, Francis and Mary, in violation of the private rights of the people of Leith, re fold the fuperiority to the town of Edinburgh, to whom it has fince been confirmed by grants from fucceffive fovereigns.

On the breaking out of he difturbances at the Reformation, the queen-regent caufed the whole town to be fortified, that the French troops might have a more ready inlet into the kingdom. It was accordingly furrounded with a wall, having eight ballions: but this wall went no farther than the flreet now called Bernard's nook, becaufe at that time the fea came up the length of that llreet ; and even as late as 1623 , a houfe fituated exactly where the weigh-boufe is at prefent, is defcribed as bounded on the eaft by the "f fand of the fea-fhore." All that 「pace, therefore, on which the row of houfes neareft the harbour of Leith now ftands, has been gained fince that time from the fea.

In the time of Charles I. a fortification was erected at Leith by the Covenanters. Cromwell built a flrong fort at the place fill called the citadel in North Leith; but it was pulled down on the refloration of Charles II. by order of government. A gate with portcullices are the prefent remains of that fortification.-A palace alfo appears to have formerly Atood here, fituated at the north-eaft boundaries of the former town, on the fpot where the prefent weigh houfe ftands. It was deftroyed by the Englif in the time of HenryVIII. The remains of this building, called the king's work, with a garden, and a piece of watte land that furround. ed it, was erected into a barony by Imes V1. and beftowed upon Bernard Lindfay of Lochill, groom of the chamber to that prince. He is faid to have fully regaired, and appropriated it to the recreations
of the count; but it foon foll from its dignity, and be. came fublervient to much more ignoble purpofes. The tennis court was converted into a weigh houfe; and the flreet which bounds it titl bears the name of the Founder, from whom it is called Bernard's nook.

As : eeith lay within the parifh of Retlalrig, the church of Rettalrig was of confequence the place of worfhip for the inlabitants of Leith; but in 1650 the Affembly ordered that church to be pulled down as a monument of idolatry, fo that Leith wanted a parifh.church for upwards of 50 years. During that period they reforted for worfhip to a large and beantiful chapel already built, and dedicated to St Mary, which is now called South, Leith cburch; and in 1609 this chapel was by authority of parliament declared to be the parin, church of the diftrict ; fo that Reflalrig is now in the parifh of South-Leith, as the latter was formerly in that of Reftalrig. In 1772, a Chapel of Eafe was erected by the inhabitants, as the parithchurch was infuffieient to contain the number of hearers. There are alfo an epifcopal and feveral diffenting congregations in Leith. North. Leith is a parilh by itfelf, and the church is fituated at what was the north end of the old bridge.
Though a very great trade is carried on between Leith and many foreign ports, yet the articles of export and import flactuate fo much, that it would be ufelefs to enter into any details either as to fpecies or quantity. In general, the imports from France, Spain, and Portugal, are wines, brandy, and fruits; from the Welt Indies and America, rice, indigo, rum, $\mathrm{fin}_{\mathrm{i}}$. gar, and logwood. But the principal foreiga trade of Leith is by the eaftern feas, for the navigation of which it is moft happily fituated. To Germany, Holland, and the Baltic, it exports lead, glafs ware, linen and woollen ftuffs, and a variety of other goods; and from thence it imports immenfe quantities of timber, oakbark, hides, linen rags, pearl afhes, flax, hemp, tar, and many other articles. The Baltic trade, however, is at prefent rather on the decline; the great extent to which it was carried on for fome years patt having been chiefly owing to the valt increafe of new buildings in Edinburgh and its environs. The coalting trade is at prefent the principal branch that employs the fhipping at Leith, including thofe which belong to other ports on the Forth, which are faid to make abont one fourth of the tonage of the Leith veffels. The fhips employed in the London trade are in general of a large fize, elegantly conllructed, and furnihed with excellent ac. commodations for pafiengers. They make at an average four voyages up and down in the year. The largett fhips in this port, however, are thofe employed in the Greenland filhery.
The fhipping at Leitb renders the demand for ropes, fail cloth, and cordage, very contiderable. There were lately three different companies whw carried on thefe manufactures, befides fome private perfons who dealt le [s confiderably. The firt of thofe companies was eftablifhed in the beginning of the prefent century; and zo years ago made, it is faid, larger dividends among the partners than any trading or manufacturiug company in the nation. There are only three comp inies at pre: fent, but a number of private manufacturers.
In the middle of the laft century, a manufactory of green glafs was eftablifhed at : he citadel of Lexth. Chopin bottles were fold at 4 s. 6d. per dozen, and?

Leith. ticle was manufactured alfo in North Leith ; and, in 1707, chopin bottles were fold at 2s. 6d. per dozen, and fo proportionably. That houfe being burnt down in 1746 , a new houfe was built the following year on South-Leith fands, and an additional one in ${ }_{5764}$. The annual expence of both houfes was between 8000 l . and 9000 l . Another was afterwards added, and three more have lately been erected. They manufacture not only bottles, but alfo window-glafs and cryttal-ware of all forts.

Manufactures of foft foap and candles were crected by St Clair of Roflin and fome merchants; the former in 1750, and the latter in 1770: a manufacture of hard foap was alfo eftablifhed in 1770. Befides thefe, there are a confiderable manufacture for making cards with which wool is combed, a great carpet factory, and feveral iron-torges. There was alfo a fugarhoufe : but it has been given up, as has likewife Mr St Clair's foap work.

The inhabitants of Leith were divided into four claffes; and thefe erected into corporations by the queen dowager, Mary of Lorraine. Thefe were mariners, maltmen, trades, and traffickers. The firft of thefe confitted of hipmalters and failors; the fecond, of malt-makers and brewers; the third, of coopers, bakers, fmiths, wrights, \&c.; and the fourth, of mercbants and fhop-keepers. Of thefe corporations the mariners are the molt confiderable. They obtained from Mary of Lorraine a gift, afterwards ratified by William and Mary, of one penny duty on the ton of goods in the harbour of Leith, for the fupport of their poor. This duty, which not many years ago did not amount to 40 l . a-year, now rifes from 701 . to 1201. as trade flourifhes. For the fame purpofe the fhipmatters alfo pay 6d. a-pound out of their own wages aninually; and the like fum they give upon the wages of their failors. From thefe and other donations, this corporation is enabled to pay from 600 I . to 700 I , ayear to their poor. Oppofite to South Leith church there is a large houfe belonging to them, called the Trinity-hofpital, becaufe originally ceufecrated to the Holy Trinity. In this houfe fome of their poor ufed formerly to be maintained, but now they are all outpenfioners. Befides other apartments, this hofpital contains a large handfome hall for the meecings of the corporation. Adjoining to the fchool-houfe there is another hofpital, called king James's bofpital ; and bears upon its front the cypher and arms of that prince. Here fome poor women belonging to the other corporations are maintained.
As the town of Leith was very ill fupplied with wa\&er, and the flreets were neither properly cleaned nor lighted, an act for remedying thefe defects was paffed in the year 1771, appointing certain perfons from among the magillrates of Edinburgh, lords of feffion, intrabitants of Edinburgh and Leith, and members of the corporations of Leith, commifioners of police; empowering them to put this act in execution; and, for that purpofe, to levy a fum not exceeding 6d. in the pound upon the valued rent of Leith. The great change which has fince taken place on the ftreets of Leith fhows the good effect of this act, and that it has
both been judicioufly prepared, and attentively executed.

Leith is computed to contain about thirteen thoufand inhabitants. The government of the town is vefled in a magittrate fent from Edinburgh, having admiral's power; and in two refiding bailies elected, by the town-council.

LEITRIM, a county of Ireland, fituated in the province of Connaught, is bounded on the north by the bay of Donnegal and part of Fermaragh, on the fouth and weft by Sligo and Rofcommon, and on the ealt by Fermanagh and Cavan. It is a fruitful county ; and, though mountainous, produces great herds of black cattle; but has few places of note. It contains 206,830 Irih plantation acres, 21 parifhes, 5 baronies, and 2 boroughs, and fends fix members to parliament; it is about 42 miles long, and 17 broad.

Leitrim, the fhire town of the county of that name, is pleafantly fituated on the banks of the river Shannon, about 80 miles from Dublin; and appears to lave been formerly a place of fome note. St Mac Liegus, fon of Cernac, was bifhop here: and his feftival is obferved on the 8th of February. It has fix fairs in the year.

LEIXIIP, a poft and fair town of Ireland pleafantly fituated in the county of Kildare and province of Leinlter, about 8 miles from Dublin. Near it are the ruins of the church and callle of Confy. The caftle of Leixlip is beautifully feated on the banks of the river Liffey; it is a fine edifice with large and pleafant gardens, at one fide of which is a fine waterfall called the Salmon leap, there being plenty of that feecies of finh hereabouts. A mile from this is Cafletown, the magnificent feat of Mr Conolly. There are three fairs here in the year.

LELAND (John), the great Englifh antiquary, was born in London about the year 1507. Having loft his parents when a child, he had the good fortune to find a friend and patron in one Mr Thomas Miles, who placed him in St Paul's fchool, of which the grammarian Lilye was matter. From that fchool he was fent to Clurit's college, Cambridge; whence, after fome years refidence, he removed to All-Souls, Oxford. From Oxford he went to Paris, chiefly with a detign to ftudy the Greek language, which at that time was but litile underftood in this kingdom. On his return to England he took orders, and was foon appointed chaplain to king Henry VIII. who alfo gave him the rectory of Poppeling, in the marfhes of Calais, appointed him his librarian, and in 1533 granted to him, by commiffion under the great leal, the office of king's antiquary; an office never borne by any other perfon before or fince. By this com* miffion he was empowered to fearch for ancient writings in all the libraries of colleges, abbeys, priories, \&e. in his majetty's dominions. We are told by his laft bingrapher, that he renounced popery loon after his return to England; but he quoies no authority. Be this as it may, in 15.36, he obtained a difpentation to keep a curate at Poppeling, and fet out on his journey in fearch of antiquities. In this employment he fpent fix years, during which time he vifited every part of England where monuments of antiquity were

## L E L [ 7883$] \quad$ L F. I

I.ceand. to be expected. After his return, in the year $15+2$, he was prefented by the king to the rich rectury of Hafeley in Oxfordhire; and in the following year he gave him a prebend of King's College, now Chift's church, in Oxford, befides that of E.ilt and Weft Krowle, in the cathedral of Salifoury. Being thus amply provided for, he retired to a houfe of his own in the parifh of St Michael le Querne in London, where he fpent fix years more in digetting the materials which he had collected. King Hemy VIII. died in 1547 ; and in a thort time after, poor Leland lof his fenfes. He was ai firlt feized with a decp melancholy, which was fucceeded by a total deprivation of his reafon. In this dreadful fate he continued till the begiuning of the year $155^{2}$, when he was happily releafed hy death. He was buried in the church of Se Michael le Querne, which was deftroyed by the fire in $1656 . \mathrm{Mr}$ Leland is remembered as a man of great learning, an uaiverfal lingnift, an excellent Latin poet, and a molt indefatigable and kilful antiquary. On his death, king Edward VI. gave all his papers to Sir John Checke, his tutor and Latin fecretary of ftate. The king dying, and Sir John heing obliged to leave the kingdom, he gave four folio volumes of Leland's collections to Humphrey Purefoy, E[q; which, in 1612 , were by his fon given to William Burton, author of the hitory of Leicetterfhire. This gentleman alfo became polfeffed of the Itinerary in 8 vols folio, which, in 1632 , he depolited in the Botleian library. Many other of Leland's manufcripts, after the death of Sir John Checke, fell into the hands of lord Paget, Sir William Cecil, and others, which at laft fortunately came int', the poffeffion of Sir John Cotton. Thefe manuferipts were of great ufe to all out fubfequent antiquarians, particularly Cambden, Sir Wilham Dugdale, Stowe, Lambard, Dr Batteley, Ant. Wood, \&c. His Itinerary throughout moft parts of England and Wales, was publifhed by Mr Hearne, 9 vols 8 ro. in $17 \mathrm{ro-11;}$ as was alfo his Collęanea de rebus Britannicis, 6 vols 8 vo , in 1715.

Leland (John), well known by his writings in defence of Chriltianity, was born at Wigan in Lancafhire in 1691 , of eminently pious and virtuous parents. They took the earlieft care to feafon his mind with proper inftructions; but, in his fixth year, the fmall-pox deprived hin of his underftanding and memory, and expunged all his former ideas. He continued in this deplorable ftate near a twelvemonth, when his facolties feemed to fpring up anew; and rhough he did not retain the leaft traces of any impreffions made on him before the diftemper, yet he now difcovered a quick apprehenfion and ftrong memory. In a few years after, his parents fettled in Dublin, which fituation gave him an ealy introduction to learning and the feiences. When he was properly qualified by years and ftudy, he was called to be paftor to a congregation of Proteftant diffenters in that city. He was an able and acceptable preacher, but his labuurs were not confined to the pulpit. The many attacks made on Chriftianity, and by fome writers of no contemptible abilitics, enzaged him to confider the fubject with the exacteft care, and the mof faithful examinatiou. Upon the mof deliberate inquiry, the truth and divine original, as well as the excellence and importance of Chriftianity, appearing to bim with great luftre, he publifhed anfwers to feveral
anthors who fucceffively appeared in that canfe. He Lelezies was indeed a mafter in this controverfy; and his hiftory of it, Ityled "A View of the Deifical Writers that have appeared in England in the laft and prefent Century, \&c." is very greatly and defervedly efteemed. In the decline of life he publifhed another laborious work, intitled, "The Advantage and Nectfity of the Chriftian Revelation, hown from the State of Religion in the ancient Heachen World, efpecially with refpect to the Krowledge and Wornip of the Onc true God; a Rule of moral Duty, and a State of future Rewards and Punifmens; to which is prefixed, a lony and preliminary Dilcourfe on Natural and Revealed Relicion," 2 vols 4 o. This noble and extenfive fubject, the feveral parts of $w$ hich have been nlight. ly and occafionally handled by other wricers, Leland has ireated at large with the greatelt care, accuracy, and candour. And, in his "View of the Deitical Writers," his cool and difpaffionate manner of treating their arguments, and his folid confutation of them, have contributed more to deprefs the caufe of atheifm and infidelity, than the angry zeal of warm difputants. But not only his learning and abilities, but alfo his amiable temper, great modefty, and exemplary life, recommended his memory to general elteem and affection. He died in 1766.

LELEEGEIS, the ancient name of Miletus, from the Leleges, the firlt inhabitants of it.

LELEGES, anciently a people of Afia, of Greek oribinal; the name denoting " a collection of people:" they hirt occupied the illands; then paffing over to the continent, they fettled partly in Myfia on the Sinus. Adramyttenus, and partly in that part of Ionia next Ca ria. - There were Leleges alfo of Laconia. Thefe went to the Trojan war with Altes their king. Achilles plundered their country, and obliged them to retire to the neighbourhood of Halicarnaffus, where they fixed their habitation. - The inhabitants of Laconia and of Megara alfo bore this name for fome time, from Lelex one of their kings.

LELEX, an Egyptian who came with a colony to Megara, where he reigned about 200 years before the Trojap war. His [ubjects were called frum him Lelcges. - Alfo the name of a Greek who was the firft king of Laconia in Peloponnelus. His fubjects were alfo called Leleges, and the country where he reigned $L_{6}=$ legia.

LELY (Sir Peter), an excellent painter, born in Weftphalia in the year $16 \mathrm{I} \%$. He was placed as a difciple with Peter Grebber at Haerlem; and in $16 \not{ }_{\ddagger}$ was induced, by the encouragement Charles I. gave to the fine arts, to come to England. He became flatepainter to Charles II. who knighted him ; and being as complete a gentleman as a painter, that king took pleafure in converfing with him. He practifed portrait-painting, and fucceeded fo well that he was preferred before all his cotemporaries. Hence he became perpetually involved in bulinefs; fo that he was thereby prevented. from going into Italy to finith the courfe of his ftudies, which in his younger days he was very defirous of: however, he made himfelf amends, by getting the bett drawings, prints, and paintings, of the molt celebrated Italian mallers. Among thefe were the better part of the Arundel Collection, which he had from that family, many whereof were fold after his death at prodi.

## L E M

I centere, gious rates, bearing upon them his ufual mark of 1. L. -The advantage he reaped from this collection, the beft chofen of any one of his time, appears from that admirable ftyle which he acquired by daily converfing with the works of thofe great mafters. In his correct draught and beautiful colouring, but more efpecially in the цraceful airs of his heads, and the pleafing variety of his poftures, together with the gentle and loofe management of the draperies, he excelled moft of liis predeceflors. Yet the critics remark, that he preferved in almolt all his female faces a drowfy fweetnefs of the eyes peculiar to himfelf; for which he is reckoned a mannerit. The hands of his portraits are remarkably fine and elegantly turned; and he frequently added landicapes in the back. grounds of his pictures, in a fyle peculiar to himfelf, and better fuited to his fubject than moft men could do. He excelled likewife in crayon painting. He was familiar with, and much refpected by, perfons of the greatef eminence in the king. dom. He became enamoured of a beautiful Englifh lady, to whom he was fome time after married; and:he purchafed an effate at New in the county of Surrey, to which he often retired in the latter part of his life. He cied of an apoplexy in 1680 at I Iondon; and was burind at Cuvent-garden church, where there is a marble monument erected to hio memoly, with his buft, carved by Mr Gibhons, and a Latin epitaph, written, as is faid, by Mr Flatman.

LEMBERG, a town of Poland, capital of Red Rufia, feated in the palatinate of Lemburg, on the river Pelten. It is pretty well fortified, and defended by two citadels, one of which is feated on an eminence without the town. The fquare, the churches, and the public buildings, are magnificent; and it is a large and rich trading place. It has a Roman catholic archbihop, and an Armenian as well as a Ruffian bifhop; but the Proteftants are not tolerated. This city was reduced to the laft extremity by the rebel Coffacs and Tartars, and was forced to retheem itfelf with a large furm of money. In 1672 , it was befieged in vain by the Turks ; but in 1704, was taken by form by Char. XII. of Sweden. E. L, ong. 24. 46. N. Lat. 49. 51.

LEMERY (Nichilas), a celebrated chemift, born at Rouen in Normandy in 1645 . After having made the tour of France, he, in 1072 , commenced an acquaintance with M. Martyn apothecary to Monfieur the l’riuce: and performed feveral courfes of chemiftry in the laboratory of this chemilt at the Hotel de Conde; which brought him to the knowledge and elleem of the prince. He provided himfelf at length with a laboratory of his own, and might lave been made a doczor of phyfic : but he chofe to continue an apothecary, from lis attachment to chemiftry, in which he opened public leetures; and tis confluence of fcholars was fo great as farcely to allow him room to perform his operations. The true principles of chemiltry in his time were hut ill undeiftood; Lemery was the firit who abolifhed the fenfelefs jargon of barbarous terms, rrduced the fcience to clear and fimple ideas, and proenifed nothing that he did not perform. In 1681, he was difturbed on account of his religion ; and came to England, where he was well received by Charles 1I.: but affairs not promifing him the fame tranquillity, he returned to France, and fought for fhelter under a Doctor's degrce ; but the revocation of the edies of Nantz

## L E M

drove him into the Romifh communion to avoid perfect. tion. Hethen became alfociate chemift and penfionary in the royal academy of fciences, and died in 1715 . He wrote, A courfe of chemitry: An univerfal pharmacopceiz; An univerfal treatife of drugs; and, A trcatife on antimony.

LEMING, in zoology. See Mus.
LEMMA, (of $\lambda \alpha \mu G_{a v s}$, "I aflume,") in mathema. tics, denotes a previous propoficion, laid down in order to clear the way for fome following demonftration; and prefixed either to theorem3, in order to render their demonltration lefs perplexed and intricate; or to problems, to make their refolution more eafy and hort. Thus, to prove a pyramid one third of a prifm, or parallelopiped, of the fame bafe and height with it, the demonftration whereof in the ordinary way is difficult and troublefome; this lemma may be premifed, which is proved in the rules of progreflion, that the fum of the feries of the fquares, in numbers in arithmetical progreffion, beginning from 0 , and going on 1,4 , $9,16,25,36, \& \mathrm{c}$. is always fubtriple of the fum of as many terms, each equal to the greateft; or is always one-third of the greatell term multiplied by the number of terms. Thus, to find the inflection of a curve line, this lemma is firlt premifed, that a tangent may be draven to the given curve in a given point.

So in phyfics, to the demonflration of moft propofitions, fuch lemmata as thefe are neceflary firf to be allowed: that there is no penetration of dimenfions; that all matter is divifible; and the like. As alfo in the theory of medicinc, that where the blood circulates, there is life, \&c.

LEMNA, DUCK-MEAT, in botany; a genus of the diandria order, belonging to the monocia clafs of plants; and in the natural method ranking under the 54 th order, Mifcellanes. The male calyx is monophyllous; there is no corolla; the female calyx monophyllous ; there is no corolla, one fyle; the capfule unilocular. There are three fpecies, all natives of Britain, growing frequently in ditches and the fhallow parto of flagnant waters. All of them are acceptable food for ducks and geefe.

LIEMNIAN-earth, Terra Lemnia, a medicinal, aftringent fort of eatth, of a fatty confiltence and reddifh colour; ufed in the fame cafes as bole. It has its name from the ifland of Lemnos, whence is is chiefly brought. Many form it into round cakes, and imprefs a feal upon it ; whence it is alfo called terra figillata. A fort is faid to b: imported from Senegal, which is not properly an earth, though fo called, but compored of the dried pulp of the fruit of the Baовав.

LEMNIUS (Lxvinus), a famous phyfician, born at Ziric: Zce in Zealand, in 1505 . He practifed phyfte with applaufe; and afier his wife's dcath being made prieft, became canon of Ziric.-Zee, where he died in 1560. He left feveral efteemed works, the principal of which is intitled De occultis nature miraculis.
LEMNOS (anc. geog. ), anoble ifland in the Ægean fea, near Thrace, called alfo Dipolis, from its confilling of two towns. The firt inhabitants were the Pelafgi, or rather the Thracians, who were murdered by their wives. After them came the children of the Lemnian widows by the Argonauts, whofe defcendants were at laft expelled by the Pclafgi, about 1100 years hefore the Chriftian era. Lemnos is about 122 miles in circumfereuse accooding to Iliny ; who fays, that it is of-

## I E M [ 785$]$ I M M

Liemox ten tadowed by mount Athos, thougin at the ditance Hiplipyle. It is famous for a certaiu kind of earth or
chalk called serra Lemnia, or terra figillata from the feal or impreflion which it can bear, and which is ufed for confolidating womds. As the inhabitants were hlackfmiths, the poets have taken occalion to fix the forges of Vulcan in that ifland, and to conlecrate the v:hute country to his divinity. Lemnos is alfo celebrated for a labyrinth, which, according to fome traditions, furpaffed thofe of Crete and Egypt. Some remains of it were Atill vifible in the age of Pling. The ifland of Lemnos was reduced under the power of Athens by Miltiades.
L.EMON, in botany. See Citrus.

Iamon-Ifand, one of the Skelig-iflands fo called; Gituated off the coalt of the county of lierry, in the province of Munfter in Ireland. It is rather a round rock, always above water, and therefore no way dangerouy to thips. An incredible number of gannets and other birds breed here; and it is remarkable that the ganmet nefles no where on the fouthern coalts of Ire land but on this rock, though many of them are feen on all parts of our coalts on the wing. There is anofher rock on the northern coalt of Ireland remarkable for the fame circumflance.

LEMONADE, a liquor prepared of water, fugar, and lemon or citron juice ; it is very cooling and grateful.

LEMOVICES, a people of Aquitania, fituated beEween the Bituriges Cubi to the north, the Arverni to the eaft, the Cadurci to the fouth, and the Pictones to the well. Now the Limofin and La Marche.
L.EMUR, the Maucauco, in zoology, a genus of quadrupeds belonging to the order of primates, the characters of which are thefe: There are four fore-teeth in the upper jaw, the intermediate ones being remote; and fix long, compreffed, parallel teeth in the under jaw; the dog-teeth are folitary, and the grinders are fomewhat lobated.

1. The tardigradus, or tail-lefs mancanco, a fmall nuimal found in Bengal and the illand of Ceylon. It is of a very fingular conftmetion, and perhaps longer in proportion to its thicknefs than any other quadruped. The head is rouadif, with a fharp-pointed nofe, and fmall ears : the body is covered with hort, foft, and filky afh-coloured and reddifh fur: the toes are naked, and the nails flat ; excepting thofe of the inner toe on each hind foot, which are long, crooked, and marp. The length of the animal from the nofe to the rump is fixteen inches.-It lives in the woods, and feeds on fruits : In a tame flate, it appears to be foud of eggs, and it would alfo greedily devour fmall hirds. This animal has the inaetivity of the floth, and creeps flowly along the ground: it is very tenacious of its hold, and nakes a plaintive noife.

A variety of the above, or according to Mr I'ennant a diltinct fpecies, is,
2. The loris of Buffon, or tardigradus of Seba. It has a produced dog-like vifage, with the forehead high above the nofe: the ears are large, thin, and rounded: the body is llender and weak: limbs are very long and nender ; and thumb on each foot is more diftinct, and Ceparate from the toes: the hair on the body is univerfally thort, and delicately foft ; the colour on the
upper part tas:ny, bencath whitifh. In length, from the tip of the nofe to the anus, the animal is only eight inches. It differs totally in form and in nature from the preceding; and notwithflanding the epithet of furdigradus or floth given in Seba, it is very active, and afcends trees molt nimbly. It has the actions of an ape; and, if we credit Seha, the male climbs the trees, and talles the fruits before it prefents them to its mate.
3. The mongooz, or woolly mancanco, inhabits Madagafear, and the iflands to the ealtward as far as Ces lebes. It is about the fiee of a cat, and has the whole upper part of the body covered with long, foft, and thick fur, a little culled or waved, of a deep brownith alh-colour ; the tail is very long, covered with the fame Cort of hair, and of the fame colour. It lives on fruits, turns its tail over ita head to protect it from rain, and fleeps on trees; it is very fportive and good-natured, and very tender.
4. The catta, or ring-tailed maki, iuhabits Madagafear and the neighbouring ifles. It is of the fize of a cat; has the hair on the top and bind-part of the head of a deep afh-colour, the back and fides reddifh, the belly and infides of the limbs white; all its hair is very foft, clofe and fine, and erect like the pile of velvet ; the tail is twice the length of the body. It is very good natured, and has all the life of a monkey, with out its mifchicvous difpofition; it is very cleanly, and has a weak ery. In a wild fate they go in troops of 30 or 40 , and are eafly tamed wher taken young.
5. The caudatus-niger, or ruffed mancauco, the Fari of Buffon), is alfo an inhabitane of Madagafcar, It is fomewhat larger clian the laft, and has long hair Itanding out round the fides of the head like a ruff; a long aill; the colcur of the whole animal generally black, but fometimes white fpotted with black. In a wild tlate, it is very fierce; and makes fuch a violent noile in the woods, that the cries of two might be eafily millaken for the noife made by a hundred.
6. The volans, or flying maucanco, refembles a bat : being furnifhed with a ttrong membrane like that animal, by which it is enabled to fly. It inhabits the country about Guzarat, the Molucca ifles, and the Philippines; feeds on the fruits of the trees, and is very diftinct both from the bat and flying fquirrel. Its his ftory, however, is wery little known.
7. The tarfer of Buffon (ranked by Mr Pennant under this genus) has a pointed vifage ; flender nofe, bilobated at the end: eyes large and prominent : ears erect, broad, naked, femitranfparent, an inch and a half long, with a tuft of hairs between them on the top of the head, and long hairs on each fide of the nofe and on the upper eye-brow. In each jaw are two cutting and two canine teeth ; which form an exception in this genus. There are four long flender toes and a diftinct thumb on each foot; the thumbs on the hind feet very broad and greatly dilated at their ends: the tail is almoll naked; the greater part round and fealy like that of a rat, but growing hairy towa:ds the end, which is tufted. The penis is pendulous; and the fcrotum and tellicles are of a valt fize in proportion to the animal. The length of the animal from nofe to tail is near fix inches; to the hind toes eleven and a balf, the hind legs, like thofe of the jerboa, being of a great

5 G
length

## L E M

lemutes length; the tail is nine inches and a half long. It inhabits the remoteft ifla.ds of India, efpecially Amboina; and is called by the Macafliars porfje.
8. The litule maucauco has a rounded head, fharp nofe, long whikers; two canine teeth in each jaw; four cutting teeth in the upper jaw, fix in the lower: feven grinders on each fide; the nearelt fharp, the more diflant lobated: the ears are large, rounciifl, naked, and membranaceous; the eyes very large and full. The toes are long, and of unequal lengths; the ends round; the mails round, and very fhort; except that of the firf toe, which is long and flarp: the tail is hairy, of the length of the body, and prehenfile. The animal is rather lefs than the black rat ; and, in Mr Penuant's opinion, feems to be the fame which Buffon calls le rat de Madagafar. It is fuppofed to live in the palm.trees, and feed on fruits. It holds its food in its fore feet like fquirrels; is lively, and has a weak cry; and when it fleeps, it rolls itfelf up.
There are three or four other fpecies; thofe above deferibed are figured on Plate CCLXVIII.
LEMURES, in antiquity, frites or hobgoblins ; reflefs ghots of departed perfons, who return to terrify and torment the living.
Thefe are the fame with larve, which the ancients imagived to wander round the world, to frighten good people, and plague the bad. For which reafon at Rone they had lemuria or feafts inflituted to appeafe the manes of the defunct. See Lares.
Apuleins explains the ancient notion of manes thus: the fouls of men releafed from the bands of the boly, and freed from performing their bodily fuutions, become a kind of demons or genii, formerly called lemures. Of thefe lemures. thofe that were kind to their families were called lares faniliares; but thofe who, for their crimes, were condemped to wander continually, without meeting with any place of refl, and terrified good men, and hurt the bad, are vulgarly called kirve.
An ancient commentator on Horace nentions, that the Romans wrote lemures for remures; which laft word was formed from liemus, who was killed by his brother Romulus, and who rcturned to earth to torment him.
But Apuleius obferves, that in the ancient Latin tongue lerumeres fignifies the foul of a man feparated from the body by death.
Lemuria, or Lemuralia, a feaf folemnizedat Rome on the 9 th of May, to pacify the maies of the dead or in honour of the lemures.- It was inffituted by Romulus, to appeafe the ghoft of his murdered brother Remus, which he thought was continually purfuing him to revenge the horrid crime. - The name lemuria is thercfore fuppofed to be a corruption of Re muria, i, e. the feaft of Remus. Sacrifices continued for thrce nights, the temples were fhut up, and marriages were prolibited during the folemnity. A variety of whimical ceremonies were performed, magical words made ufe of, and the ghofs defired to withdraw, without endeavouring to hurt or afrigh:t their friends above ground. The cinief formalities were ablution, putting black beans into their mouths, and beating kettles and pans, to make the goblins keep their difance.
LENA, a great river of Siberia in Afla, which

## 5867 <br> I. $\mathrm{E} N$

takes its rife in N. Lat. 52.30. and E. Long. 124. 30. from Ferro. After traverfing a large tract of land, it divides itfelf into five branches about Lat. $73^{\circ}$. Three of thefe run weftward, and two eaftward, by which it difcharges itfelf into the Icy Sea. Its three weftern moutlis tie in $143^{\circ}$ E. Long. from Ferro, but the eaft. ern ones cxtend to 153 . The current is every where flow, and its bed entirely free from rocks. The bottom is fandy, and the banks are in fome places rocky and mountainous. Sisteen large rivers fall into the Lena during its courfe to the northern ocean.

Lenea, a feftival kept by the Greeks in honour of Bacchus, at which there was much fcafting and Bacchanalian jollity, accompanied with poetical contentions, and the exhibition of tragedics. The poor goat was generally facrificed on the occalion, and treated with various marks of cruclty and contempt, as being naturally fond of broufing on the vine-fioots.

LENFANT (James), a learned French writer born in 1661. After fludying at Saumur, he went to Heidelberg, where he received impofition of hands for the minithy in 1684. He difcharged the functions of this character with great reputation there, as chaplain of the electreís dowager Palatine, and pattor in ordinary to the French church. The defcent of the French into the Palatinate obliged our author to depart from Heidelberg in 1688 . He went to Berlin, where the elector Frederic, afterward king of Pruffia, appointed him one of the miniffers. There he continued 39 years, dittinguifhing himfelf by his writings. He was preacher to the queen of Pruffia, Charlotta Sophia; and after her death, to the late king of Pruffia. In 1797 he took a journey to England and Holiand, where he had the honour to preach before Queen Anne; and might have fettled in London, with the title of chaplain to ber majefly. In 1712 he went to Helmftadt, in 1715 to Leiplic, and in 1725 to Breflaw, to fearch for rare books and MSS. It is not certain whether it was he that firf formed the defign of the Bibliotleque Germanique, which began in 1720; or whether it was fuggelled to him by one of the fociety of learned men, which took the name of Anonymons, and who ordinarily met at his houfe. He died in 1728. His principal works are, 1. The Hifory of the Council of Conitance, 2 vols 4 to. 2. A Hitiory of the Council of Pifa, 2 vols 4to. 3. The New Teflament tranflated from the Greek into the French, with Notes by Beaufobre and Leafant, 2 vols 4to. 4. The Hittory of Pope Joan, from Spanheim's Latin differtacion. 5. Several pieces in the Bibliotheque Choifie, La Republic des Lettres, La Bibliotbequs Gernamique, \&e.

LENGLET (Nicholas du Fiefnoy, Pabbe), born at Buauvais in France, 1674, was a mof fertile and ufeful French author on a variety of fubjects, hiftorical, geographical, political, and philofophical. The following deferve particular notice: 1. A Mthod of Srudying Hiflory, with a Catalogue of the Principal Hillorians of every age and country, publifhed in i713; a work which cftablifhed his reputation as an hillorical writer: it was tranflated into mofl of the modern languages, particularly our own, with confiderable improvements, by Richard Rawlinfon, LL.D. and F.R.S. and publifled at London in 1730 , is 2 vols 8vo. 2. A Copious Abridgment of Univerfal Hitorys

## L E N

appearance at Paris in 1744 , in 2 vols fmall 8vo, and was univerfally admired by the literati in all parts of Europe. The author attended with great candour, as every writer ought, to well-founded judicious criticifms. In future editions he made feveral alterations and improvements, and from one of thefe, we believe that of 1759 , an Englifh tranflation was made, and publifhed at London in 1762 , in 2 vols large 8 vo. Du Frefnoy died in 1755 : the Paris edition of 1759 was printed from the author's currected copy; and the imprefion being fold off, another edition appeared in 1763 , with confiderable improvements by an unknown editor: to the biograplical part, a great number of names of refpectable perfons are added, not to be found in the former edition; and it has this fuperior advantage in the hiltorical parts, that the general biftory is brought down to the year 1762. Du Frefnoy, however, has luaded his work with catalugues of faints, martyrs, councils, fynods, herefies, fchifms, and other ecclefiaftical matters, fit only for the libraries of Popifh convents and feminaries.

LENGTH, the extent of any thing material from end to end. In duration, it is applied to any fpace of time, whether long or fhort.

LENGTHENING, in fhip-carpentry, the operacion of cutting a fhip doven acrofs the middle, and adding a certain portion to iser length. It is performed by fawing her planks afunder in different places of her length, on each fide of the midhip frame, to prevent her from being too much weakened in one place. The two ends are then drawn apart to a limited difance; which mult be equal to the propufed addition of length. An intermediate piece of timber is next added to the keel, upon which a fufficient number of timbers are erected, to fill up the vacancy produced by the feparation. The two parts of the kelfon are afterwards united by an additional piece which is fcored down upon the foor-timbers, and as many beams as may be neceffary are fixed acrofs the fhip in the new interval. Finally, the planks of the fide are prolong. ed fo as to unite with each other; and thofe of the ceiling refitted in the fame manner; by which the whole procefs is completed.

LENEICIA, a ftrong town of Poland, and capital of a palatinate of the fame name, with a fort feated on a rock. The nobility of the province hold their diet here. It ftands in a motass on the banks of the river Bfura, in E. Long 19. 25, N. Lat 52. 12.

LENOX or Dunaarton Shire, a county of Scotland, ftretching 24 miles in length and 20 in breadth, is bounded on the fouth by the river and frith of Clyde, on the well by Lochlong and Argylefhire, on the north by the Grampian hills, and on the eaft by Monteith and Stirlingfhire. Great part of clis county confilts of hills and heaths, fit for nothing but pafturage and fport; even in the lower lands, the foil is not extrencly fertile: yet the face of the country is agreeably diverffifed with hill, dale, mountain, heath, ftreams, lakes, woods, and fields of corn: the fhire is likewife beautified with a great number of agreeable feats and plantations, belonging to gentlemen of fortune. Fart of this county is warhed by the river Clyde ${ }^{i d}$ its courfe to the fea: even at the cafte of Dunbar.
ton, the breadth of it amounts to two miles at high. water, and it continnes extending in width and depth until it joins the ocean. From the mouth of the Clyde, the two bays of L.ochlong and Lochfyn make large indentations in the fhire of Dumbarton. The only river of any confideration that runs through this county, is the Leven, the Lelanontus of Poolemy, otherwife called Levimia, the Latin name for Lenox. The river Leven is a pure tranfparent paftoral Aream, that warbles over a bed of pebbles, through a delightful vale adorned with farms, feats, woods, and plantations. It derives its origia from the great lake called Lochlomond. of which indeed it is the owerflowing, and, after a delightful meandring courfe of tive or fix miles, difembogues iefelf into the Clyde at the caltle of Dunbarion. But the greatef curiolity of this county is Lochlomond itfelf, a vaft budy of freh water, fupplied by fubterraneous fprings and rivulets, furrounded with huge mountains, extending 25 miles in length, and in fume places five miles in breadth, incredibly deep in every part, interfperfed with 24 verdant iftes, fome of which are focked with red deer, and inhabited. Nothing can be more wild.y romantic than this part of the country during the fummer. fafon, on the fouth fide of the lake: the high road runs in fume places through natural woods; overhung, on one hand, by fleep mountains, covered with fowery heath; and on the other opening in long viltas upon the lake, terminated by green iflands that feem to float upon the water. Amung the rivers of this thire we fhall like. wife mention the water of Blane, which, though itfelf an inconfiderable Atream, hath been rendered famous by the birth of George Buchanan, the celebrated Latin poet and hiltorian. He was born on the north fide of the lake, not far from the place called Buchanan, where we may behold an elegant feat belonging to the duke of Montrofe, head of the noble family of Graham, fo often diftinguilhed by its loyalty, integrity, and valour. The fame part of the country gave birth to the great mathematician and naturalitt, Napier, Lord Merchifon, inventor of the logarithms. The title of Lenox, with the property of great part of the fhire, was heretofore velled in a branch of the royal family of Stuart, with which it was reunited in the perfon of King James VI, whofe father, Henry Lord Darnly, was fon to the duke of Lenox. This prince conferred the title upon his kinfman Efme Stuart, fon of John Lord d'Aubigney in France: but, his race failing at the death of Charles duke of Lenox and Richmond, and the eftate devolving to the crown, King Clarles Il. conferred bath titles on his uwn natural fon by the duchefs of Portfmouth; and they are Atill enjoyed by his polterity. The people of Lenosthire are chiefly Lowlanders, though in fome parts of it divine fervice is performed in the Erfe language. The molt numerous clans in this didrift, are the Macfarlanes, the Colquhouns, and the Buchanans. They generally profers the Proteltant faith, according to the Prefbyterian difcipline; yet fome of the gentlemen follow the Englith ritual. The commonalty are for the molt part fober, honeft, and induftrious; and though they live poorly, are tall, vigorous, and leealthy.

LENS, a piece of glafs, or any other tranfparent fubftance, the furfaces of which are fo formed, that

Leमox,
dens.
the rays of light, by paffing through it, are made to change their direction, either tending to meet in a point beyond the lens, or made to become parallel af. ter converging or diverging; or laitly, proceeding as if they had iflued from a point before they fell upon the lens. Some lenfes are convex, or thicker in the middle; fome concave, or thinner in the middle; fome plano-conves, or plano-concave; that is with one fide fiat, and the other convex or concave; and fome are called menifenfes, or convex on one fide and concave on the other. See Dioptrics, p. 33

LENT, a folemn time of falling in the Chriftian chuch, obferved as a tine of humiliation before Eafter, the great fellival of our Savicur's refurrection.

Thofe of the Romifh church, and fome of the Proteflant communion, maintain, that it was alvays a faft of 40 days, and, as fuch, of apofolical inttitution. Others think it was only of ecclefialtical inflitution, and that it was varioully obferved in different churches, and grew by degrees from a faft of 40 hours to a falt of to days. This is the fentiment of Morton, Bifhop Taylor, Du Moulin, Daillé, and others.

Anciently the manner of obferving lent among thofe who were pioully difpofed, was to abflain from fond till evening: their only refrefhment was a fupper; and then it was indifferent whether it was flefh or any other food, provided it was ufed with fobriety and moderation.

Lent was thought the proper time for exercifing, more abundantly, every fpecies of charity. Thus what they Spared from their own bodies by abridging them of a meal, was ufually given to the poor ; they employed their vacant hours in vifiting the fick and thofe that were in prifon, in entertaining flrangers, and reconciling differences. The imperial laws forbad all profecution of men in criminal actions, that might bring them to corporal punifhment and torture, during the whole feafon. This was a time of more than ordinary ftrictnefs and devotion, and therefore in many of the great churches they had religious affemblies for prayer and preaching every day. All public games and ftage-plays were prohibited at this feafon; as alfo the celcbration of all feftivals, bitth-days, and marriages, as unfuitable to the prefent occafion.
The Chriftians of the Greek church obferve four lents: the firft commences on the 15 th of Novemter; the fecond is the fame with our lent ; the third begins the week after Whitfuntide, and continues till the feftival of St Peter and St Paul; and the fourth commences on the firlt of Augult, and lafts no longer than till the 15 th. Thefe lents are obferved with great Hrictnefs and autterity; but on Saturdays and Sundays they indulge themfelves in drinking wine and wfing oil, which are prohibited on other days.
LENTIL, in botany. See Ervum.
Lentini. See Leontini.
lentiscus, in botany. See Pistacia.
l.EO, in zoology. See Felis.

Leo, in altronomy, the fifth of the 12 figns of the zodiac. The ftars in the confellation Leo in Ptolemy's catalogue are 27 , befides the informes, which are 8 ; in Tycho's 30 ; in the Britannic catasogue 25 .

Leo X. whofe proper name was Juhn de Medicis, is a pope ever to be remembered by Proteftants, as having proved the caufe of the reformation begun by Martin Luther. He had been honoured with a cardinal's hat at 14 years of are, and forne years after with the dignity of legate by Julius II, He was in that quality in the army which was defeated by the French'near Ravenna in 1512, where he was taken prifoner. The foldiers, who had overcome him, thowed him fuch great veneration, that they lumbly afked his pardon for gaining the victory, befought hims to give them abfolution for it , and promifed never to beas arms againtt the pope. When Pope Julius died, Leo was very ill of the venereal difeafe at Florence, and was carried to llome in a litter. His hurrying about every night to the cardinals of his factiun, occalioned the breaking of his ulcer; and the matter which ran from it exhaled fuch a flench, that all the cells in the conclave, which were feparated only by thin partitions, were poifoned by it. Upon this the cardinals confulted the phylicians of the conclave, to know what the matter was. They, being bribed, faid the cardinal de Medicis could not live a month; which fentence occationed his being chofen pope. Thus cardinal de Medicis, then not 30 years of age, was elected pope upon a falfe information; and as joy is the mofl fovereign of all remedies, he foon after recovered his healilh, fo that the old cardinals had reafon to repent their credulity. - He was better calculated for a temporal prince, being ambitious, politic, luxurious, a connoiffur in the tine arts, and an accomplifhed fine gentleman : thus qualified, it is no wonder that fo young a pontiff, neglecting the tue intereft of his church, fhould avail himfelf of the folly of religious dupes, and publicly fell indulgences to fupport his prodigality, efpecially as he was known to difbelieve Chrillianity itfelf, which he called $A$ very profitable fable for him and his predeciffors. In 1517, he publifhed general indulgences throughout Europe (and ordered the priefts to recommend them) in favour of thofe who would contribute any funs towards completing the church of St Peter; and this was tbe bafis of the reformation. (See Luther and Indulgence.) Leo. died in 1521 .

It is but juttice to add, that to tlus pope was principally owing the revival of polite literature in Italy. He fpared neither pains nor expence in recovering ancient manufcripts, and procuring good editions of them; he favoured the arts and fciences; and gloried: in being the patron of learned and ingenious men, who in return lave been very lavifh in his praife. Mr. Pope, in his effay on Criticiif, beftows on him thefe hatmonious lines.

But fee! each mufe in leo's golden days, Starts from her trance; and tims her wither'd bays; Rume's ancient Geniu-, o'er its tuins fpread,
Shakes off the dutt, at d rears hiv rev'rend head.
Then Sculpture and her fifter Arts revive:
Stones leap to form, and rocks begin to live;
With fwecter notes each rifing teaple rung ;
A Raphatl painted, and a Vida fung.
Leo (St), a fmall but flrong town of Italy, in thie territory of the church, and duchy of Urbino, with a: bifhop's fee. It is feated on a mountain, near the river Marrechia, in E. Long, 12. 25. N. Lat. 43. 57.
LEQMINSTER, a town of Herefordfhire, is,
England
1.eon. England, feated on the river Lug, which waters the north and eat fides of the town, and over which there are feveral bridges. It is a large, handfome, populous borough ; and is a great thoroughfare bet wixt SouthWales and London, from which latt it is diftant $\mathrm{H}_{3}$ meafured miles. In King John's reign it was burnt, but foon rebuilt. It was incorporated by Queen Mary, and is governed by a hight theward, bailiff, recorder, is capital burgefles (ont of whom the bailiff is chofen), and a town clerk. Its market is on Friday, and its fairs, which are all noted for horfes and black catte, on February 13th, Tueflay after Midlent-Sunday, May 13th, July 10 th, Stptember 4 th, and November rd. The market was on Thurfday till it was changed, on a petition from the cities of Hereford and Worcefter, complaining of their lofs of trade; fince which, the valt trade it liad in wool and wheat is much leffened. The beft flax is faid to grow here, and it has been equally noted for the belt wheat, barley, and the fineft bread. The inhabitants drive a confiderable trade not only in the wool, but in gloves, leather, hatmaking, scc. and there are feveral rivers in and about the town on which they have mills and other machines. Near its church are fome remains of its priory; and on a neighbouring hill are the ruins of a palace, called to this day Comfort.Cafle. It has feveral good inns, and fends two members to parliament, W. Long. 2. 45. N. Lat. 52. 20.

LEON, an ancient town of France, in Lower Bretagne, and capital of the 'Lyonnois, with a bifhop's fee. It is feated near the fea, in W. Long. 3. 55. N. Lat. 4 8. 4 .

Leon, a province of Spain, with the title of a kingdom; bounded on the notth by Allurias; on the welt by Galicia and Portugal ; and on the fouth by EAtremadura and Caftile, which alfo bounds it on the eaft. It is about 125 miles in length, and 100 in breadth; and is divided into two alnoll equal parts by the river Duero, or Douro. It produces all the nectffaries of life, and Leon is the capital town.

LEON, an ancient and laıge epifcopal town of Spain, and capital of the kingdom of that name, built by the Romanis in-the time of Galba. It has the fineft cathedral church in all Spain. It was formerly more rich and populous than at prefent, and had the honour of being the capital of the firt Chrillian kingdom in Spain. It is feated between two fources of the river Efra, in W. Long. 5. 13. N. Lat. 42. 55.

Leon ( Peter Cicca de), author of the hittory of Peru. He left Spain his native country at 13 years of age, in order to go into America, where he refided 17 years; and obferved fo many remarkable things, that he refolved to commit them to writing. The fint part of his hiftory was printed at Seville in 1553 . He began it in $154^{1}$, and ended it in 1550 . He was at Lima, the capital of the kingdom of Peru, when he gave the finifhing flrcke to it , and was then 32 years of age.
I.eon de Nicaragua, a town of North America, in New Spain, and in the province of Nicaragua; the refidence of the governor, and a bithop's fee. It confifts of about 1000 houfes, and has feveral monatleries and nunneries belonging to it. At one end of the town is a lake whicl ebbs and flows like the fa. The town is feated at the foot of a volcano, which sen-
ders it fubject to earthquakes. It was taken by the buccaneers in 1685, in light of a Spanifh army who were fix to one. W. Long. 86.10. N. I sat. 12. 25.

LEONARD de noblet (St.) an ancient town of France, in the province of Guienne and territory of L imofin, with a confideralle manufactory of cloth andpaper. It is feated on the river Vienne, in E. Long. 1.35. N. Lat. 45.50.

Leonarido da vinci. See Vinci.
L.EONCLAVIUS (Juhn), one of the mot leam. ed men of the tGth century, was a native of Weft phalia. He travelled into Turkey, and collected excellent materials for compofing The Ottoman hiffory; and it is to him rhe public is indebted for the bett account we have of that empire. To his knowledge in the learned languages, he had added that of the civil law; whereby he was very well qualified to tranflate the $B a_{a}$ fllica. Hiz other verfions were efteemed, though critics pretend to have found many faults in them. He died in 1593, aged 60.

LEONIDAS I. king of Sparta, a renowned warrior, flain in defending the fraits of Thermopylx againt Xerxes, 480 B. C. See Sparta.

LEONINE, in poetry, is applied to a kind of verfes which rhime at every hemillic, the middle always chiming to the end. Of which kind we find feveral ancient hymns, epigrams, prophecies, \&c.-For inAtance, Muretus rpaking of the poetry of Lurenzo Gambara of Brefle, fays,

> Brisia, weflratis nerdof a of lumina vatis,
> Non funt noflrates fergere digma nates.

The following one is from the fchool of Salernum :
L't vites penam de potibus incite conam.
The erigin of the word is fomewhat obfeure : Pafquier derives it from one Leoninus or Leonius, who excelled in this way; and dedicated feveral pieces to. Pope Alexander III.; others derive it from Pope Leo; and others from the beatt called lion, by reafon it is the luftiett of all verfes.
LEONTICA, feals or facrifices celebrated among. the ancients in honour of the fun. - They were called Lecritica, and the priefts who officiated at them Leenes, becaufe they reprefented the fun under the figure of a lion radiant, bearing a tiara, and griping in his two. fore paws the horns of a bull, who ftruggled with him in vain to difengage himfelf.
The critics are extremely divided about this feaf. Some will have it annivcrfary, and to have made its. return not in a foiar but in a lunar year ; but others hold its return more frequent, and give inftances. where the period was not above two bundred andtwenty days.

The ceremony was fomctimes alfo called Mithriaca; Mithras being the name of the fun among the ancient Perfians. There was always a man facrificed at thefe. feafts, till the time of Hadrian, who prohibited it by a law. Commodus introduced the cuitom afrefh, after. whofe time it was again exploded.

LEONTICE, LIon's leaf: A genus of the monogynia order, belonging to the hexandria clafs of plants; and in the natural method ranking muder the ${ }_{2}{ }^{4}$ th order, Corydales. The corolla is hexapetalous: the neclarium hexaphyllous, Atanding on the heels of the corolla, with its limb patent; the calya hexaphylm

Leortini lons, and deciduous. There are four focies, natives ! s.conurus. of the fouthern parts of Europe, two of which are fometimes cultivated in this country. Thefe are,

1. The chryfogonum with winged leaves; and, 2. The leontopetalum with decompounded leaves. Both thotite plants are natives of the Archiplaso illands, and alfo grow in the corn-fieldsabout AleppoinSyria, where they Alower foon after Chrifmas. They have large tuberous roots like thofe of the cyclamen, covered with a darkbrown bark. The flowers fit upon naked foottalks: thofe of the firt fort fuflain many yellow flowers, but the flowers of the fecond are of a paler colour. Both fpecies are propagated by feeds, which muft be fown foon after they are ripe, otherwife they feldom fucceed. When fent to ditant countries, they mull be preferved in fand. The plants are, however, very difficult to te preferved in this country: for they will not thrive in pots; and when they are planted in the full ground, frof frequently deftroys them. The bet way iz to fow the feed as foon as it comes from abroad, covering it with glafles in the winter to protect it from frof ; and, in the fpring, when the plants begin to appear, they mull have free air admitted to them at all times when the weather is mild, otherwife they will be weak.

LEONTINI, or Leontien (anc. geog.), a town of Sicily on the fouth fide of the river Terias, 20 miles north-weft of Syracufe. The territory, called Campi Leontini, was extremely fertile (Cic:ro): thefe were the Campi Laffrigonii, anciently fo called; the feat of the Leltrigons, according to the commentators on the poets. The name Leoratini is from Leo, the impiction on their coin being a lion. Now called Leentini, a town fituated in the Val di Noto, in the fouth-eall of Sicily.

LEONTIUM, one of the twelve towns of Achaia, whether on, or more diltant from, the bay of Corinth, is uncertain. Leontiun of Sicily.. See Leontini.

LEONTODON, dandelion: A genus of the polygamia $x$ qualis order, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the 49 th order, Compoffte. The receptacle is naked; the calyx imbricated, with the fales fomewhat loofe; the pappus feathery. I here are nine fpecies, of which the only remarkable one is the Taraxacum, or common dandelion, found on the road fides, in paflures, and on the banks of ditches. Early in the fpring, the leaves whillt yet white and hardly unfolded are an excellent ingredient in fal ds. The French eat the roots and tender leaves with bread and butter. Children that eat it in the evening experience its diuretic effcets in the night, which is the reafon that other European nations as well as ourfelves vulgarly call it pifs.a.bed. When a fwarm of locults had dellroyed the harvef in the ifland of Minorca, many of the inhabitants fubfifed upon thiseplant. The expreffed juice has been given to the quantity of four ounces three or four times a day ; and Boerhaave had a great opinion of the utility of this and other lactefcent plants in vifceral obftuttions. Goats eat it ; fivine devour it greedily; fheep and cows are not fond of it, and horfes refure it. Small birds are fond of the feeds.

LEONURUS, lion's-tail: A genus of the gym. nofpermia order, belonging to the didynamia clafs of plants; and is the oatural method ranking under the

42 d arder, Fericillate. The anthere are powdered Leonarus with fhining points, or fmall elevated globular particles.

> Species. I. The Africana, with fpear fhaped leaves, is a native of Ethiopia. It rifes with a fhrubby falk feven or eight feet liigh, fending out feveral four cornered branches, garnifhed with oblong narrow leaves, acutcly indented on their edges, hairy on their upper fide, and veined on the under fide, ttanding oppofite. The flowers atre produced in whorls, each of the branches having two or three of thefe whorls towards their ends. They are of the lip kind, fhaped fomewhat like tbofe of the dead nettle; but are much longer, and covered with fhort hairs. They are of a golden fearlet colour, fo make a fine appearance. The flowers commenly appear in Octuber and November, and fomctimes continue till the middle of December, but are not fucceeded by feeds in this country. There is 5 . variety with variegated leaves which is admired by fome, but the whorls of flowers are finaller than thofe of the phain fort. 2. The nepet $x$ folia, with oval leaves, is a native of the Cape of Good Hope. This rifes with a fquare flarubby ftalk about three feet high, fending out feveral four-cornered branches, garnifhed with oval crenated leaves, rough on their under fide like the dead-ncttle, but veined on the upper fide, and placed oppofite. The flowers come out in whorls like thofe of the former fort, but are not fo long nor fo deep colcured. They appear at the fame feafon with the frilt, and continue as long in beauty. There are three other fpecies, but the above are the moft remarkable.

Culture. Both forts are propagated by cuatings, which fhould be expofed to the air long enough to liarden the fhoots, and planted in the beginning of July, after which they will take root very freely. They fhould be planted in a loamy border to an eaItern afpect; and if they are covered clofely with a bell or hand-glafo to exclude the air, and fhaded from theefun, it will forward their putting forth roots. As foon as they have taken good root, they fhould be taken up and planted each in a feparate pot filled with foft loamy eath, and placed in the flade till they have taken new root. In October they mull be removed into the green-houfe.

LEOPARD. See Felis.
Leopsrd's Bane, in botany. See Doronicum.
LEPANTO, a ftrong and very confiderable town of Turkey in Eurcpe, and in Livadia, with an archbifhop's fee and a flrong fort. It is built on the top of a mountain, in form of a fugar-loaf; and is divided into four towns, tach furrounded by walls, and commanded by a cafte on the top of the mountain. The harbour is very fmall, and may be fhut up by a chain, the entrance being but 50 feet wide. It was taken from the T'urks ty the Venctians in 1687; bue was afterwards evacuated, and the cafte demolifhed in 1699, in confequence of the treaty of Carlowitz. It was near this town that Don John of Auftria obtained the famous victory over the Turkifh flett in 1571. The produce of the adjacert country is wine, oil, corn, and rice. Turkey leather is alfo manufactured here. The wine would be exceedirgly good if they did not pitch their veffels on the infide, but this renders the tafte very difagreeable to thofe who are not accuflomed

## L E P

Lepas fomed to it. The Turks have fix or feven mofques here, and the Greeks two churches. It is leated on a gulph of the fame name, in E. L.ong. 22. 13. N. Lat. $3^{8 .} 34$.
L.EPAS, the ACORN, in zoology; a gentis belonging to the order of vermes tellacea. I'te animal is the triton; the fhell is multivalve, unequal, fixed by a ftem or feffile. There are feveral fpecies, of which the molt remarkable is the anatifera, confilling of five Thells depreffed, affixed to a pedicle and in clulters. It adheres to the bottom of hips by its pedicles. The tentacula from its animal are feathered; and have given the old Euglifh hiftorians and naturalits the idea of a bird. They afcribed the origin of the barnacle goofe to thofe thells. See Plate CCLXIII.

LEPIDIUM, dittanuer, or Pepper wort: A genus of the filiculofx order, belonging to the tetradynamia clafs of plants; and in the natural method ranking under the $39^{\text {th }}$ order, Siliquofe. The filicula is emarginated, cordated, and poly[permous, with the vaives carinated contrary or broader than the partition. There are 19 fpecies, of which the only remarkable one is the latifolium or common dittander. This is a native of many parts both of Scotland and England. It hath fmall, white, creeping roots, by which it multiplies very fait, and is difficult to be eradicated after it has long grown in any place. The ltalks are fmooth, rife two feet high, and feud out many fide-branches. The fowers grow in clofe bunches towards the top of the branclees, coming out frons the fide: they ate fmall, and compoled of four finall white petals. The feeds ripen in autumn. The whole plant has a hot biting tatte like pepper; and the leaves have been often ufed by the countty people to give a relith to their viands intlead of that fpice, whence the plant has got the appeilation of posr man's pepper. It is reckoned an antifcobbutic, and was formerly ufed inttead of the borfe ralifh fourvy.grafs.
1.EPIDOPIERA, in zoology, an order of infeets, with four winss, which are covered with imbricated fquamule. Sce Zoolngy.

LEP1SM.t, in zool.gy ; a genus of apterous in. fects, the claracters of which are: They have fix feet formed for running ; the mouth is furnifhed with tour palpi, two of which are cetaceous and two capitated; the iail is terminated by extended brifles, and the body imbricated with fales. Therc are 7 fpecies. The faccharina (Plate CCLXXIV.) is an American fpecies, fo called becaufe moftly found among fugar ; but now common in Europe. It is of a lraden colour, but rather inclining to that of filwer, by reafon of the fmall filvery fcales with which it is covered; by which fame circumflance it retembles, effrecially in its under part, the filver fifh It is fand in gardens, under boxes, and in the crevices of window fathes in houfes, where it is very common. It ruas with gieat fwifonefs, and is difficult to catch. When touched, it lofes part of its fcales, and its foftnels makis it eafy to crufh.

LEFIUM, in naturai hitury. a senus of folfils of the harder gypfum, compoled of very fmall particles, and of a lefs glittering hue.

There is only one fpecies of this genus, being one of the lealt valuable aud must impure of the clafs of gypilus. It is of an extrens 'y rude, irregular, coarfe, acd unequal ftructure; a little foft to the touch, of a
very dull appearance, and of different degrees of a Leprofy greyifh white. It is burnt in platter for the coarfer works; it calcines very flowly and unequally, and makes but a very coarfe and ordinary platter.

LEPROSY, a foul cutaneous difeafe, appearing in dry, white, thin, fcurfy fcabs, either on thie whole body, or only fome part of it, and ulually attended with a violent itching and other pains. See (the Inders fubjoined :o) Medicine.
'I'he leprofy is of various kinds, but the Jews were particularly fubject to that called Elephantiadis. Hence the Jewilh law excluded lepers from communion with mankind, banifhing them into the country or uninhabited places, without excepting even kings. When a leper was cleanfed, he came to the city gate, and was there examined by the priefts; after this he took two live birds to the temple, and fattened one of them to a wifp of cedar and hyflop tied together with a fcarlet ribbon; the fecond bird was killed by the leper, and the blood of it received into a veflel of water; with this water the prieft fprinkled the leper, dipping the wifp and the live bird into it: this done, the live bird was let go; and the leper, having undtrgone this ceremony, was again admitted into fociety and to the ufe of things facred. See Levit. xiii. 46. 4\%. and Levit. xiv. 1. 2. \&ic.

LEP IODECORHOMBES, in matural hifory, a genus of fofils of the order of the felenitix; confiling of 10 planes, each fo nearly equal to that oppofite to it as very much to approach to a decahedral parallelopepid, though never truly or regularly fo.

Of this genus there are only live known fuecies: 1. A thin, fine, pellucid, and flender ftreaked one, with tranfverfe thrix, lound in coufferable quantities in the frata of clay in motl parts of England, particularly near Heddington in Oxfordhire. 2. A thin, dull-looking, opaque, and Aender-Areaked one, more fcarce than the former, and found principally in Leiv cetterfhire and Staffordfare. 3. A thin fine Areaked one, with longitudinal Arix, found in the clay pits at Richmond, and generally lying at great depths. This has often on its top and bottom a very elegant fmaller rhomboide, deferibed by four regular lines. 4. A rongh kind, with thick tranfvele ftix, and a feabrous furface, very common in Leicetlerthire and Yorkthire. And, 5. A very fhort kind, with thick plates, common in the clay-pits of Northamptonfire and Yorkhire.

LEPTOPOLYGINGLIMI, in natura! hiftory, a genus of foffil thells, ditinguithed by a number of minute teeth at the cardo; whereof we find great numbers at Harwich-cliff, and in the marle pits of Suffex.

LEPTUM, in antiquity, a fmall picce of money, which, according to fome, was only the eighth part of an obolus; but others will have it to be a filver or. brals drachm.

LEPTURA, in zoology, a. genus of infects belonging to the order of coleoptera, the characters of which ate thefe:-The feelers are brittly; the elytra are atten:ated towards the apex: and the thorax is fomewhat cylindrical. There are 25 fpecies, priacipally dittin suithed by their colour.

LEPUS, in zoology, a genus of quadrupeds belonging to the order of glires. The characters are thefe:

## L E P [ 792 ] L E P

F.cpes, there:-They have two fore-tecth in each jaw; thofe in the upper-jaw are double, the interior ones being fmalleft.

1. The timidus, or common hare, has a fhort tail ; the points of the ears are black; the upper-lip is divided up to the noftrils; the length of the body is generally about a font and a balf; and the colour of the hair is reddifh, interfperfed with white. The hare is naturally a timid animal. He fleeps in his form or feat during the day; and feeds, copulates, \&c. in the night. In a moon-light evening, a number of them are fometimes feen fporting together, leaping and purfuing each other: But the leaft motion, the falling of a leaf, alarms them ; and then they all run olf feparately, each taking a different route. They are extremely fwift in their motion, which is a kind of gallop, or a succeffion of quick leaps. When purfued, they always take to the higber grounds: as their fore-feet are much thorter than the hind ones, they run with more cafe up-hill than down-hill. The liare is endowed with all thofe inttincts which are geceflary for his own prefervation. In winter he choofes a form expofed to the fouth, and in fummer to the north. He conceals himfelf among vegetables of the fame colour with himfelf. Mr Fonilloux fays, that he oblerved a hare, as foon as he heard the found of the horn, or the nuife of the dogs, although at a mile's diftance, rife from her feat. fwim acrofs a rivulet, then lie down among the buthes, and by this means cvade the fcent of the dogs. After being chafed for a couple of hours, a hare will fometimes pufh another from his form, and lie down in it himfelf. When hard profted, the hare will mingle with a flock of thecp, run up an old wall and conceal himfelf among the grafs on the top of it, or crofs a river feveral times at fmall diftances. He cnever runs againft the wind, or flraight forward; but conttantly doubles about, in order to make the dogs lofe their feent.

It is remarkable that the hare, although ever fo frequently purfued by the dogs, feldom leaves the place where fle was brought forth, or even the form in which the ulually fits. It is common to find them in the fame place next day, after being long and keenly chafed the day before. The females are more grofs than the males, and have lefs Atrength and agility; they are likewife more timid, and never allow the dogs to approach fon near their form before rifing as the males. They likewife practife more arts, and double more frequently than the males.

The hare is diffuled almoft over every climate; and, notwithtanding they are every where hunted, their fpecies never diminifhes. They are in a condition of propagating the firft year of their lives; the females go with young about 30 days, and produce four or five at a cime; and as fonn as they have brought forth, they again admit the embraces of the male; fo that they may be faid to be always pregnant. The eyes of the young are open at birth; the mother fuckles them about 20 days, after which they feparate from her, and procure their own food. The young never go far from the place where they were brought forth : but ftill they live folitary, and make forms about 30 paces diftant from each other: Thus, if a young hare be found any-where, you may almof be certain of finding feveral others within a very fmall diltance. The $\mathrm{N}^{\mathrm{I}} 80$.
hare is not fo favage as his manners would indicate. He is gentle, and is fufeeptible of a kind of education. He is pretty eafily tamed, and will even thow a kind of attachment to the penple of the houle: But Itill this attachment is not fo ftrong or lafting as to engage him to become altogether domeftic; for although taken when very young, and brought up in the houle, he no fooner arrives at a certain age, than he takes the firt opportunity of recovering his liberty, and flying to the fields. The hare lives about feven or eight years. He feeds upon grals and other vegetables. His feik is excellent food.

Hares are very fubject to heas. Linnæus tells us, that the Dalecarlians make a [ort of cloth, calleل folt, of the fur; which, by attracting thefe infects, preferves the wearer from their tronblefome attacks. The hair of this creature makes a great article in the lintmanufacture ; and, as our country cannot fupply a fufficient quantity, a great deal is annually imported from Ruffia and Siberia. it he hare was reckoned a great delicacy among the Roman; the Britons, on the contrary, thouglit it impious even to tafte it : yet this animal was cultivated by them, either for the plea. fure of the chace, or for the purpofes of fupertition ; as we are informed, that Boadicea, immediately before her laf conflict with the Romans, let loofe a hare flue had concealed in her bufom, which taking what was deemed a fortunate courfe, animated her foldiers by the omen of an eafy victory over a timid enemy.
2. The variabilis, or varying hare of Pallas, has foft hair, which in funmer is grey, with a llight mixture of blaek and tawny : the ears are fhorter, and the legs more flender, than thofe of the common hare: the tail is entirgly white, even in fummer; and the feet are molt clofely and warmly furred. In winter, the whole animal changes to a fnowy whitenefs, except the tips and edges of the ears, which remain black. as are the foles of the feet, on which, in Siberia, the fur is douthly thick, and of a yellow colour. It is lefs than the common fpecies. - Thefe animals inhabit the higheft Scottifh Alps, Norway, Lapland, Ruffa, Siberia, Kamtfchatka, and the banke of the Wolga, and Hudion'sBay. In Scotland, they keep on the tops of the higheft hills, and never defcend into the vales; nor do they ever mix with the common hare, though thefe abound in this neighbourhood. They do not run faft ; and are apt to take fhelter in clefts of rocks. They are èafily tamed, and are full of frolic. They are fond of honey and carraway comfits; and they are obferved to eat their own dung before a thorm. I'his fpecies changes its colour in September; refumes its grey coat in April ; and in the extreme cold of Green. land only is always white. Both kinds of hares are common in Siberia, on the banks of the Wolga, and in the Orenburg government. The one never changes colour : the other, native of the fame place, conftantly affumes the whitenefs of the fnow during winter, This it does, not only in the open air and in a ftate of liberty, but, as experiment has proved, even when kept tame, and preferved in houfes in the fove-warmed apartments, in which it experiences the fame changes of colour as if it had dwelt on the foowy plains. - They collect together, and are feen in troops of five or fix hundred, migrating in fpring, and returning in autumn. They are compelled to this by the want of fubfiltence, quitting

## L E P

Lepus. boundaries of Siberia, and feek the plains and northern wooded parts, where vegetables abound; and towards fpring feek again the mountainous quarters.

Mr Muller fays, he once faw two black hares, in Siberia, of a wonderful fine glofs, and of as full a black as jet. Near Cafan was taken another, in the middle of the winter 1768 . Thefe fpecimens were much larger than the common kind.

In the fouthern and weftern provinces of Ruffia is a mixed breed of hares, between this and the common fpecies. It fultains, during winter only, a partial lofs of colonr: the fides, and more expofed parts of the ears and legs, in that feafon becoming white; the other parts retaining their colours. This variety is unknown beyond the Urallian chain. It is called by the Ruffians ruffack; they take them in great numbers in
 places for the manufacture of hats. The Ruffians and Tartars, like the Britons of old, hold the ficth of hares in deteftation, efteeming it impure : that of the variable, in its white flate, is exceffively infipid.

There have been feveral infances of what may becalled monfters in this fpecies, horned hares, liaving excrefcences growing out of their heads, like to the horns of the roe-buck. Such are thole figured in Gefner's hiftory of quadrupeds, p. 634; in the Nufeum Regium Hafria, $n^{\circ} 48$. tab. iv; and in Klein's hiltory of qua. drupeds, 32. tab. iii. ; and again defcribed in Wormius's mufeum, p. 321 , and in Grew's mufeum of the Royal Society. Thefe inflances have occurred in Saxony, in Denmark, and near Aftracan,
3. The Americanus, American hare or hedge-coney, has the ears tipt with grey: the upper part of the tail is black, the lower white: the neck and body are mixed with cinereous, ruft-colour, and black; the legs are of a pale ferrnginous colour; and the belly is white: the forelegs are fhorter, and the bind legs longer, in proportion, than thole of the common lare. In length it is 18 inches; and weighs from 3 to $4^{\frac{1}{2}}$ pounds. -This fpecies inhabits all parts of North America. In New Jerfey, and the colonies fouth of that province, it retains its colour the whole year. In New England, Canada, and about Hudfon's. Bay, at the approacb of winter, it changes its fhort fummer's fur for one very long, filky, and filvery, even to the roots of the hairs; the edges of the ears only preferving their colour. At that time thefe hares are in the highefl feafon for the table; and are of valt ufe to thofe who winter in Hud-fon's-Bay, where they are taken in great abundance in fpringes made of brafs-wire, to which they are led by a hedge made for that purpofe, with holes left before the fnares for the animals to pafs through.-They breed once or twice a-year, and have from five to feven at a time. They do not migrate, like the preceding; but always haunt the fame places: neither do they burrow; but lodge under fallen timber, and in hollow trees. They breed in the grafs; but in fpring fhelter their young in the trees, to which they alfo run when purfued; from which, in the fouthern colonies, the hunters force them by means of a hooked Atick, or by making a fire, and driving them out by the fmoke.
4. The tolai, or Baikal hare, has a tail longer than that of a rabbit; and the ears are longer in the male Vol. IX. Part II.
in proportion than thofe of the varying hare: the fur Lepus. is of the colour of the common hare; and the fize between that of the common and the varying hare. It inlabits the comntry beyond lake Baikal, and extends through the great Gobèe even to Thibet. The Tanguts call it Rangwo, and confecrate it among the fpots of the moon. The Mongols call it Tolai. It agrees with the common rabbit in colour of the flefh; but docs not burrow, running inflantly (without taking a ring as the common hare does) for fhelter, when purlued, into holes of rocks. The fur is bad, and of no ufe in commerce.
5. The Capenfis, or Cape hare, has long ears dilated in the middle; the ouffides naked, and of rofecolour, the infide and edges covered with thort grey hairs: the crown and back are of a dunsy colour mixed with tawny; the checks and fides cinereous; the breatt, belly, and legs, ruft-coloured: the tail is bufhy, carried upwards; and of a pale ferruginous colour. The animal is about the fize of a rabbit. It inhabits the country three days north of the Cape of Good Hope; where it is called the moumain bare, for it lives only in the rocky mountains, and docs not burrow. It is difficult to thoot it, as it intantly, on the fight of any one, luns into the fiffures of the rocks.

Allied to this, in Mr Pennant's opinion, feems the vifcachus, or vifcachas, mentioned by Acofta and Feuillée, in their accounts of Peru : they compare them to bares or rabbits. The laft fays, they inhabit the colder parts of the country. Their hair is very foft, and of a moufe colour; the tail is pretty long, and turns up; and the ears and whikers are like thofe of the common rabbit. In the time of the Incas, the hair was fpun, and wove into cloth, which was fo fine as to be ufed only by the nobility.
6. The cuniculus, or rabbit, has a very fhort tail, and naked ears. The colour of the fur, in a wild Atate, is brown; the tail black above, white beneath: in a tame ftate the general colour varies to black, pied, and quite white; and the eyes are of a fine red. The native country of this [pecies is Spain, where they were formerly taken with ferrets, as is practifed in this country at prefent. They love a temperate and warm climate, and are incapable of bearing great cold; fo that in Sweden they are obliged to be kept in houfes. They abound in Britain. Their furs make a confiderable article in the hat manufactories; and of late fuch part of the fur as is unfit for that purpofe, bas been found as good as feathers for ftuffing beds and bollters. Numbers of the ikins are annually exported into China. The Englifh counties molt noted for rabbits are Lincolnftire, Norfolk, and Cambridgefhire. Methold, in the latt cour.ty, is famous for the beft kind for the table : the foil there is fandy, and full of noffes and the carex grafs. Rabbits fwarm in the illes of Orkney, where their kims form a confiderable article of commerce. The rabbits of thofe ifles are in general grey; thofe which iuhabit the hills grow hoary in winter.

The variety called the fllwer baired rabbit was formerly in great elteem for lining of clo:bes, and their fkins were fold for 3 s . a-piece; but fince the introduction of more elegant furs, their price has fallen to 6 d . The Sunk Inland in the Humber was once famous for a moufe-coloured fort, which has fince been extirpated 5 H

## I E P

by reafon of the injury they did to the banks by bur. rowing.-.Other varieties are,
The Angora rabbit, with hair long, waved, and of a filky finenels, like that of the goat of Angora;-and the Hooded Rabbit, defrribed by 1:dwards as having a double fkin over the back into which it can withdraw its head, and another under the throat in which it can place its forefeet : it has fmall holes in the loofe fkin on the back, to admit light to the eyes. The coluur of the body is cinereous; of the heal and ears, brown.

The fecundity of the rabbit is ftll greater than that of the hare. They will breed feven times in the year, and the female fometines brings eight young ones at a time. Suppofins this to happen regularly for four years, the number of rabhits from a lingle pair will amount to $1,27+, 8+0$. By this acconnt we might juftiy apprehend being overltocked with thefe animals: but a great number of enemies prevents their increate ; not only men, but hawka and beafts of prey making dreadful havoc among then. Notwithilauding all thefe different enemies, however, we are told by Pliny and Strabo, that they once proved fuch a muifance to the inhabitants of the Balearic illands, that they were obliged in implore the affiftance of a military force from Augultus in orter to exterminate thein. They devour herbage of all kinds, roots. grain, fruizs, \&ec. They are in a condition for generating at the end of fix months; and, like the hare, the female is alnott conflantly in feafon; fie gues with young about 30 days, and brings forth from four to eight at a litter. A few days before littering, fae digs at hole in the earth, not in a draight line, but in a zig-zag form: the bottom of this hole the enlarges every way, and then pulls off a great quantity of hair from her belly, of which fhe nakes a kind of bed for her young. During the two firlt days after hirth, fhe never leaves them, but when preffed with hunger, and then the eats quickly and returns: and in this manner fhe fuckles and attends her young for fix weeks. All this time both the hole and the young are concealed from the male; fometimes, when the female goes out, the, in order to deceive the male, fills up the mouth of the hole with earth mixed with her own urine. But when the young ones begin to come to the mouth of the hole, and to sat fuch herbs as the mother brings to them, the fa. ther feems to know them : lie takes them betwixt his paws, fmooths their hair, and careffes them with great fondnefs.

The following fpecies are without tails.
7. The Alpinus, or Alpine rabbit, has fhort, broad, rounded ears; a long head, and very long whifkers, with two very long hairs above each eye: the colour of the fur at the bottom is dufky, towards the ends of a bright ferruginous colour; the tips white, and intermixed are feveral long duiky hairs, though on firft infpection the whole feems of a bright bay. The length of the animal is nine inches. This fpecies is firl feen on the Altaic chain ; extends to lake Baikal ; from thence to Kamrfchatka; and, as is faid, found in the new-difcovered Fox or Alentian iflands. They inbabit always the middle region of the fnowy mountains, in the rudeft places, wooded and abounding with herhs and moitture. They fometimes form burrows between the rocks, and oftener lodge in the crevices. They are generally found in pairs: but in cloudy weather they collect together, and lie on the rocks, and give a keen

## L E P

whifle, fo like that of a fparrow, as to deceive the hearer. On the report of a gun, they run into their holes; but foon come out again, fuppofing it to be a clap of thunder, to which they are fo much ufed in their lofty habitations. By wonderful inftinct they make a provifion againft the rigorous feafon in their inclenzent feats. A company of them, towards autumn, collect tagether vast heaps of choice herbs and graftes, nicely dried, which they place either beneath the over-hanging rocks, or between the chafins, or round the trunk of come tree. The way to thefe heaps is maked by a worn path. In many places the herbs appeared feattered, as if tu be died in the fun and harvelted properly. The heaps are formed like round or conoid ricks; and are of various fizes, according to the number of the fociety employed in forming them. They are fometimes of a man's height, and many feet in diameter, but ufusliy about three feet. Without this provifion of winter's flock they mull perifi, being prevented by the depth of frow from quiteing their retreats in queft of food. They felect the beft of vegetables, and crop them wben in the fulleit vigour, which they make into the belt and greenef hay by the judicious manner in which they dry it. Thefe ricks are the origin of fertility amidit the rocks; for the reliques, mixed with the dung of the animals, rot in the barren chafins, and create a foil productive of vegetables. Thefe ricks are alfo of great fervice to thofe people who devote themfelves to the laborious employment of fable-hunting: fur being obliged to go far from home, their horfes would often perifh for want if they had not the provifion of thefe little induftrious animals to fupport them; which is cafly to be difcovered by their height and form, even when covered with fnow. It is for this reafon that this little creature has a name among every Siberian and Tartarian nation, which otherwife would have been overlooked and defpifed. The people of Jakutz are faid to feed botb their horfes and cattle with the reliques of the winter ftock of thefe hares. Thefe animals are neglected as a food by mankind; but are the prey of fables and the Siberian weefel, which are joint inhabitants of the mountains. They are likewife greatly infelted by a fort of gadfly, which lodges its egg in their Rin in Auguft and September, whicb often proves deftructive to them.
8. The ogotona has oblong oval ears, a little pointed; with Morter whifkers than the former, and hairs long and fmooth : the colour of thofe on the body is brown at the roots, light grey in the middle, and white at the ends intermixed with a very few dofky hairs : there is a yellowih fpot on the nofe, and fpace about the rump of the fame colour: the outfide of the limbs are yellowifh; the belly is white. The length is about fix inches: weight of the male, from $6 \frac{2}{2}$ to $7 \frac{\frac{3}{5}}{5}$ ounces; of the female, from 4 to $4 \frac{3}{5}$. This fpecies inhabits only the country beyond lake Baikal, and from thence is common in all parts of the Mongolian defert, and the wat defert of Gobee, which extends on the back of China and Thibet, even to India. It frequents the open valleys and gravelly or rocky naked mountains. Thefe little creatures are called by the Mongols Ogotona; and are found in vaft abundance. They live under heaps of flones; or burrow in the fandy foil, leaving two or three entrances, which all run obliquely. They make a neft of foft grafs; and the old females make for fecurity a number of burrows near each other, that they

Yamyeng ŠCore

## L E P

Lepu\%
may if diturbed retreat from one to the other. They wander out chiefly in the night. Their voice is exceffively fhrill, and emits a note like that of a fparrow, twice or thrice repeated, but very eafily to be dillinguifhed from that of the Alpine rabbit. They live principally on the tender bark of a fort of fervice and the dwarf-elm; in the fpring, on different herbs. Before the approach of fevere cold, in the early fpring, they collect great quatitities of herbs, and fill their holes with them, which the inhabitants of the country condider as a fure fign of change of weather. Directed by the fame intliret with the former Species, they form in autumn their ricks of hay of a hemifpherical fhape, about a foot high and wide: in the fpriug thefe elegant leaps difappear, and nothing but the relicts are feen. They copulate in the fpring, and about the latter end of June their young are obferved to be full grown. They are the prey of hawks, magpies, and
SSee Felis. owls: but the cat Manul $\dagger$ makes the greatelt havock among them; and the ermine and fitchet are equally their enemy.

9 The pufllus, or calling rabbit, with a long head thickly covered with fur even to the tip of the nofe; numerous hairs in the whifkets; ears large and rounded; legs very fhort, and the foles furred bencath: its whole coat is very foft, long, and fmooth, with a thick, long, fine down benenth. of a brownifh lead-colour; the hairs are of the fame colour, towards the ends of a light grey and tipt with black; the lower part of the body 1s.hoary : the fides and ends of the fur are yellowifh. The length of the animal is about fix inches: weight from $3 \frac{1}{4}$ to $4_{\frac{1}{2}}^{2}$ oz. but in winter fearcely $2 \frac{1}{2}$. This fpecies inhabits the fouth-eaft parts of Ruffa, and about all the ridge of hills fpreading fouthward from the Urallian chain; alfo about the Irtif, and in the weef part of the Altaic chain; but no where in the ealt beyond the Oby. They delight in the moit funny valleys and herby hills, efpecially near the edges of woods, to which tley run on any alarm. They live in fo concealed a manner as very rarcly to be feen: but are often taken in winter in the fnares laid for the ermines; fo are will known to the hunters. About the Volga they are called Jemhenoi Satybik, or ground bare: the 'Tartars, from their voice, fyle them tfchotfohot or itfitizan, or the barking moufe: the Kalonues call them rejla. They choofe tor their habizations a dry ipot, amidt buthes covered with a firm fod, preforing the weltern fides oí the hills. In thefe they burow, leaving a very fmall hole for the entrance; and forming long galleries, in which they make their nefts. Thofe of the old ones and females are numerous and intricate: fo that their place would be fcarcely known but for their excrements; and even thofe they drop, by a wife inftinct, under lome bufh, left their dwelling thould be difeovered by their enemies among the animal creation. Their voice alone betrays their abode; it is like the piping of a quail, but dreper, and fo loud as to be heard at the dittance of half a German mile. It is repeated by jult intervals, thrice, four times, and often fix. The voice is emitted at night and morning; in the day, except in rainy and elondy wcather. It is common to both, fexes; but the female is filent for fome time after parturition, which is about the beginning of May N. S. She brings forth Ex at a
time, blind and naked; which the fuckles often, and coves carefully with the matcrials of her nelt. There molt harmefs and inoffenfive animals never go from their holes. They feed and make their little excurfrons by night : they are eafily made tame; and will feareely bite when liandled. The males in confinement are obferved to attack nne another, and exprefo their anger by a grunting noife.

There are three or four other fpecies of Lepus. Several are figured on Plate CCLXIX.

Lepus, the hare, in altronomy, a conftellation of the fouthern hemifphere ; whofe ftars in Ptolemy's catalogue are 12 ; in that of Tycho's 13 ; and in the Britannic 19.

LERCHEA, in botany; a genus of the pentandria order, belonging to the monodelphia clafs of plants. The calyx is five-toothed; the curolla funnel-fhaped and quinquelid; there are five autheræ litting on the tube of the germ; these is one llyle; the capfule trilocular and polyfpermous.

LERI (John de), a Proteftant minifter of the province of Burgundy. He was lludying at Genera when it was reported there that Villegagnon defired they would fend him fome paltors into Brazil. He made that voyage with two minifters, whom the church of Geneva lent thither in 1556 ; and wrote an account of that voyage, which has beea much commended by Thuanus and others.

LERIA, or Leiria, a ftrong town of Eltremadura in Purtugal, with a caflle and bifhop's fee. It contains about 3500 inhabitants, and was formerly the refidence of the kings of Portugal. W. Long. 7. 50. N. Lat. 39. 40.

I, ERIDA, as ancient, Arong, and large town of Spain, in Catalonia, with a bihop's fee, an univerlity, and a ftrong eaflle. This place declared for king Charles after the reduction of Barcelona in 1705 : but it was retaken by the duke of Orleans in 1707 , after the battle of Almanza. It is leated on a bill near the river Segra, and io a fertile foil, in. E. Long. 0. 35. N. Lat. 4i. 3 t.

LERINA, or Planasia, (anc. geog.), one of the two fmall insuds over againt Antipolis, called alfo Lerinas and Lirines. Now St Honorat, on the coalt of Province, fearee two leagues to the fouth of Antibes.

LERINS, the name of two inands in the Mediterranean fea, lying on the coatt of Provence in France, five miles from Antibes; that near the coaft, called $S$ t Margaret, is guarded by invalids, fate-prifoners being fent here. It was taken by the Englifh in 1746 , but marfual Belleifle retook it in 1747 . The other is called St Honorat; and is lefs than the former, but has a Beıredictine abbey.

LIERMA, a town of Spain, in Old Caftile, feated on the river Arlanza, with the title of a ducby. W. Lon. 3.5.N. Lat. 42. 2.

LERNA, (anc. geog.), not far from Argos, on the confines of Laconica; fuppofed to be a town of Laconica, but on the borders of Argolis; the polition which Paulanias allots to it, near Temenium, on the fea; withour adding whether it is town, river, or lake. According to Straho, it is a lake, fituated between the territories of Argos and Mycene, in contradiction. to Paulanias, If there was a town of this name, it 5 H 2
feems

Lersca feems to have flood towards the fea, but tbe lake to have bsen more inland. Mela calls it a well-known town on the Sinus Argolicus; and Statius by Lerna feems to mean fomething more than a lake. This, however, is the lake in which, as Strabo fays, was the fabled Hydra of Hercules: therefore called Lerna Anguifera (Statius). The lake runs in a uver orftram to the lea, and perlidps arifes from a river, (Virgil.) From the lake the proverb, Lerna Malorum, took its rife ; becaufe, according to Strabo, religious purgations were petformed in it ; or, according to Hefycinus, becaule the Argives threw all their filth into it.

LERNEA, in zoology ; a genus of infects of the order of Vermes inollifica, the characters of which are: The body fixes itillf by its tentacula, is oblong, and rather tapering: there are two ovaries like tails, and the rentacula are theped like arms. (See three fpecimens figused on Pl, t. CCI.XXIV.)-1. The cyprinacea has four tentacula, two of which are linulated at the top. It is a fimall fpecies; abuut half an inch long, and of the thickncis of a fmall ftraw : the body is rounded, of a pale gresith white, gloffy on the furface, and fomewhat pellucid: it is thruft out of a kind of coat or fheath, as it were at the bale, which is of a white colour and a thick fkin : towards the other exircmity of the body, there are three ohtufe tubercules, noe of which is much larger than the rell : the mouth is fituated in the anterior part, and near it there are two fof: and fefhy proceffes; and near thefe there is allo on each fide another foft procefs, which is lunated at the extremity. It is found on the fides of the bream, carf, and roach, in many of our ponds and rivers, in great atundance. 2. The falmonea, or fal-mon-loufe, has an ovated body, cordated thorax, and two linear arms approaching nearly to each other. 3. The alellina, has a lunated body and cordated thoiax ; and inhabits the gills of the cod-fifh and ling of the northern ocean.

LERNICA, formerly a large city in the ifland of Cyprus, as appears froin its ruins ; but is now no more than a large village, feated on the fouthern coalt of that inland, where there is a good road, and a fmall fort for its defence.

LERO (anc. geog.); one of the two fmall inlands in the Mediterrancan, oppofite to Antipolis, and half a mile diftant from it to the fuuth. Now St Margarita, over againft Antibes, on the coalt of Provence.

Lero, or Leros, an illand of the Archipelago, and one of the Sporades; remarkable, accurding to fome authors, for the birth of Patroclus. E. Long. 26. 15. N. Lat. 37. 0 .

LE Roy le reut, the king's affent to public bills. Sce the articles Bill, Statute, and Parlaament.

LERWICK, the capital town of Shetland, fituated in the inand ealled the Mainland, in W. Long. I. 30. N. Lat. G1. 20. It contains about 300 tamilies, with abundance of good houfes, and as fafhionable people as are to be feen in any town in Scotland of its bulk. At the northend of ilse town there is a regular fort, which was built at the charge of the government in the reign of King Charles IL.; who, in the time of his firlt war with the Dutch, fent over a garrifon confiting of 300 men under the command of one colonel William Sinclair a
native of Zetland, and one Mr Milse architect, for Lerwick, buidding the faid fort, with 20 or 30 cannoes to plant Lefos. upon it for protection of the conntry. There was a -r houle built wathin the fort fulficient to lodge 100 men. The garrifon ltaid hese three years; the charge of which, with the buidding the fort, is laid to lave Itood the king 28,000 puunds llenling. WVI in the garrifon removed, they carried of the cannon from the fort; and in the next war with the Dutch, two or three years after the garrifon removed, a Dutch frigate came into Brafay Sound, and burnt the houfe in the furt and feveral others the bult in the town. Lerwick has no fieedoms nor privileges, but is governed by a bailie upon the fame fooning with the other bailies in the country. There is a cturch in it, and one minitter, of the Preflyterian eltablimment. He has for ftipend 500 marks paid him out of the bilhop's rents of Orkney, 300 marks by the town of Letwick, and the tythes of Gulb=rwicl: about 200 marks; making in all 1000 marks Scats yearly, widt a free houle and garden. Leruick chiefly fubbits by the iefort of foreiguers to it ; fo when that fails it mult decline, as indeed it has done for leveral years paft, having been very little frequented by foreigners, and thereby is becomevery poor. Several projects have been talked of, and witten upon, which might have been very beneficial to Lerwick Giford's and Zetland had they taken place; as that of the Britin Zethand, of merchants carrying goods from Mufcuvy and Sweden, r.7deligned for the plantations in America, that mult be entered in Bricain, having them entered at Lerwick, which would fave a great deal of time and charges to thefe merchants; alfo the Greenland and Herring Fiflaery companies of Britain propoled Lerwick as a molt commodious port for lodging their llores in, and for repacking their herrings, multing their oil, and thence exporting the lame to toreign markets. The grand objection to thefe fettlements is, that Lerwick is an open unfortified place; and in cafe of a wat, the merchants flips and goods would be expoled to the ene$m y$ : for removing of which difficulty, it has been obferved, that would government beftuw a fmall garifon upon it of only 100 men and about 20 pieces of cannon, and be at a fmall charge in repairing the old fort, and erecting a fmall battery or two incre, thefemeafures might be fufficient to fecure the place againtt any ordinary eftort the enemy might makeagaintt it ; and Lerwick being thus fortified, all Britifh thips coming from the Ealt or Weft Indies, could come fafely there in time of war, and lie fecure until carried thence by convoy, or otherwife as the proprietors hould direct; and thus Lerwick might become more advantageous to the trade of Great Britain than Gibraltar or Port Mahon, and that for onetenth part of the charge of either of thofe places.

LESBOS, a large inland in the Aigean fea, on the coalt of Eolia, of about 168 miles in circumference. It has been feverally called Pelafgia, from the Pelatgi by whom it was firt peopled; Macaria, from Macareus who fettled in it; and Lefbos, from the Kon-in-law and fueceflor of Macareus who bore the fame name. The clief towns of Lefoos were Methymaa and Mitylene. It was originally governed by kings, but they were afterwards fubjected to the neighbouring powers. The wine which it produced was greatly efleemed by the ancients, and ltill is in the fame repute arnong the

[
Lefcaille moderns. The Lefbians were fo debauched and difliII

Lefouis. pated, that the epithet of Leforizn was often ufed to fi. . nify debauchery and extravagance. Lefbos has given the old Pyire Calpiz.
birth to many illuftrious perfons, fuch as Arion, Terpander, Sappho, \&c. S.e Mit ylene.

LESCAILIE (James), a celehrated Dutch poet and minter, was born at Geneva. He and his daughter Catharine Lefcaille have exculled all the Dutch poets. ?hat lady, who was furnamed the Sappho of Hollind, and the tenth Mufe, died in 1711. A collection of her puems las bcen priuted, in which are the Tragedies of Geriferic, Wenceflaus, Herod and Mariamne, Fiercules and Dejancira, Nicomedes, A. riadue, Caffandra, \&c. James Lefcaille her father deferved the poet's crown, with which the emperor Leopold honoured him in the year 1603 : he died about the year 1677 , aged 67 .

LESCAR, a town of Galcony, in France, and in the territcry of Bearn, with a bifhop's fee; feated on a bill, in W. Long. o. 30. N. Lat. 43. 23 .

LESGUI;, a people of Afia, whofe country is indiffrently called by the Geor, jians Lefguiflan and Dagbeflan. It is bounded to the fouth and eatl by Perlia and the Cafpian, to the fouth weft and welt by Georgia, the Ofi, and $K$ tti, and to the north by the Killi and Tartar tribes. It is divided into a variety of diftricts, generally independent, and governed by chiefs elected by the people. Guldenlaadt has remarked, in the Lefguis language, eight different dialeets, and has claffed their tribes in conformity to this obfervation.
The firt dialect comprehends 15 tribes, which are as follow: I. Avar, in Georgian Chunfagh. The chief of this dillriet, commonly called $A v_{u} r^{2}-K$ ban, is the molt powerful prince of Lefguiftan, and refides at Kabuda, on the river Kaferuk. The village of Avar is, in the dialect of Andi, called Horbul. 2. Kafe. ruk, in the ligh mountains, extending alung a brat ch1 of the Koilu, called Karak. Tbis dilleict is dependant on the Khan of the Kafi Kumychs. 3. Idatle, on the Koifu, joining on the Aridi; fubjeet to the Avar Khan. +. Mukratle, fituated on the Karak, and fubject to the Avan Khan. 5. Oufekul, fubject to the fame, and fituated on the Koifu. 6. Karakhle, upon the Karak, below Kaferuk, fubject to the fame. 7. Ghumbet, on the iiver Ghumbet, that joins the Koifu, fubject to the chief of the Coumyks. 8. A. rakan; and, 9. Burtuna, on the Koifu. 10. Antfugh, on the Samura, fubject to Georgia. 11. Tebel, on the fame river, independent. 12. Tanurgi, or Tumural, on the fame river. 13. Akhti; and, 14. Rutal, on the fame. 15. Dhar, in a valley that runs from the Alazall to the Samura. It was formerly fubject to Georgia, but is now independent. In this diftrict are feen remains of the old wall that begins at Derbent, and probably terminates at the A-lazan.-The inhabitants of Derbent believe that their town was built by Alexander, and that this wall for merly extended as far as the Black Sea. It is, however, probable, from many inferiptions in old Turkifh, Perfian, Arabic, and Rutini characters, that the wall, and the aqueducts with their various fubterraneous paf. fages, many of which are now filled up, are of $\mathrm{r}_{\mathrm{j}} \mathrm{h}$ antiquity. This town fufered grearly during its fiege by Sultan Amurath, who entirely deltroyed the lower
quarter, then inlabited by Greeks, It was again ta. Lefguis. ken by Schach Abbas. Gacrber). This town is $\underbrace{\text {, }}$

The fecond dialect is fpoken in the two following diftricts: 1. Dido, or Didonli, about the fource of the Samura. This diftrict is rich in mines; a ridge of uninhabited mountains divides it from Caket. 2. Info, on the fimall rivulets that join the Samura. Thefe two diltricks, containing together abuut 1000 families, were formerly fubject to Georgia, but are now independent.

The third dialect is that of Kabutf:, which lies on the Samura rivulets, eaft of Dido, and north of Caket.

The fourth dialect is that of Andi, fituated on a rivulet that runs into the Koifu. Some of its villages are futject to the Avar. Khan, but the greater part to the khan of Axai. The whole confilts of about 800 families.

The fifth dialect is common to four diltricts, namely, 1. Akufha, on the Kiniru. Cubject to the Uimei, or khan of the Caitaks, and Kara-Caitaks, containing about 1000 families. The following cuttom is attributed by Colonel Gaterber to the fubjects of this prince: "Whenever the Ufmei has a fon, he is carried round from village to village, and alternately fuckled by every woman who has a child at her breat until be is weaned. This cuftom, by eftablifling a kind of brotherhood between the prince and his fubjects, fingularly endears them to each other." 2. Balkar. 3. Zudakara, or Zudakh, down the Koifu, fubject to the Uimei. +. Kubetha, near the Koifu. Colonel Gaerber, who wrote an accoant of thefe comntries in 1728 , gives the following defeription of this very curious place: "Kubefha is a large Alrong town, fitua. ted on a hill between high mountains. Its inhabitants call themfeives Franki (Franks, a name connmon in the calt to all Europeans), and relate, that their anceftors were brought hither by fome accident, the particulars of which are now forguiten. 'The common conjecture is, that they were maniners call away upoin the coatt ; bat thofe who pretend to be better verfed in their hitlory, tell the thury this way :-The Grecks and Genuel:, fay they, carricd on, during feveral centuries, a cunfizerable trade, not only on the Biack fea, but likexife on the Cafpian, and were certainly acquainted with the mines contained it thefe mountains, from which they drew by their trade with the ishabitants great quantities of filver, copper, and other metals. In order to work thefe upon the fpot, they fent hither a number of workmen to eftablifh manufactures, and iultruct the inhabitants. The fubfequent invalions of the Arabs, Tuiks, and Monguls, during which the mines were filled up, and the manufactures abandoned, prevented the itrangers from effectin 5 their return, fo that they coutinued bere, and erected themfelves into a republic. What renders this account the more probable is, that they are fill excellent artilts, and make very good fire-arms, as well rifled as plain; fabres, cuati of mail, and feveral articles in gold and iilver, for exportation. 'They have likewife, for their own defence, firall copper cannons, of three pounds calibre, cait by themelves. They coin Turkilh and Perfian filver money, and even rubles, which readily pafs current, becaufe they are of the full weight and

## L E S

Lefpuis, value. - In their valleys they have panture and arable Lefkard. lands, as vell as gardens; but they purchafe the gueater part of their corn, 1 rufting chiefly for fupport to the fale of their manufactures, which oare much admired in Perfia, Turkey, and the Crimea. They are generally in good circumftances, are a quiet, inofienfive people, but higla firited, and independent. Their town is confidered as a neutral fpot, where the neighbouring princes can depofit their treafures with fafety. They elect yearly twelve magiftrates, to whom they pay the moft unlimited obedience; and as all the inhabitants are on a footing of perfect equality, each individual is fure to have in his turn a fhare in the goverminent. In the year 1725 , their magilrates, as well as the Ufimei, acknowledged the fovereignty of Ruffil, but without paying any tribute." 5. Zudakara, or Zadakh, down the Koifu, fubject to the Ulmei. It contains ahout 2000 families.

The fixth dialect belengs to the diftricts on the eatern flope of Caucafus, between Tarku and Derbent, which are, 1. Caitak; and 2, Tabafferen, or Kara Caitak, buth fibject to the Ufneti.

The feventh dialect is that of Kali-Coumyk, on a branch of the Konifn, near Zudakara. This trihe has a khan, whofe authority is recognted by fome neigh. bouring diftricts.

The eighth dialeet is that of Kuraele, belonging to the khan of Cuba.

Befides thefe, there are fome other Lefguis tribes, whofe dialects ${ }^{\circ} \mathrm{Mr}$ Guldenflaedt was unable to procure. From a comparifon of thofe which he has nbtained, it appears that the language of the Lefgu:s las no kind of aflinity with any other known language, excepting only the Samoyede, to which it has a remote refem. blance.

This prople is probably defcended from the tribes of mountaineers, known to ancient geographers under the name of Lefre, or Ligyes. The flrength of their country, which is a region of mountains, whofe paffes are known only to themfelves, has probably at all times fecured them from foreign invafion; but as the fame canfe mult have divided them into a number of ribes, independent of each other, and perhaps always diflinguifhed by different dialects, it is not cafy to imagine any common caufe of union which can ever have affembled the whole nation, and have led them to undertake very remute conquefts. Their hiflory, therefore, were it known, would probably be very uninterefting to us. They fubfift by raifing catte, and by predatory expeditions into the countrics of their more wealthy neighbours. During the troubles in Perlia, towards the heginning of this century, they repeatedly facked the towns of Shamachie and Ardehil, and ravaged the neighbouring diltricts; and the prefent wretched flate of Georgia and of part of Armenia, is awing to the frequency of their incurfions. In their perfons and drefs, and in their general habits of life, as far as thefe are known to us, they greatly tefemble the Circaffian.

LESKARD, a town in Cornwall, feated in a level, is a corporation, and fends two members to parliament. It had formerly a caftle, now in ruins. It is one of the largeft and beft built towns in Cornwall, with the greateft market. It was firt incorporeted by Edward earl of Cornwall, afterwards by King John's

81 I. E S
fon, Richard king of the Romans, and had privileges from Edward the Black Prince. Queen Elizaberta granted it a charter ; by which it was to have a mayor and burgeffes, who flould have a perpetual fucceffion, purchafe lands, \&ce. Here is a handiome townhall built on Hone pillars, with a turret on it, and a noble clock with four dials that sof near 2001 . Here are a large church, a meeting-lioule, an eminent freefchoul, and a curicus conduit; and on the adjacent commons, whici feed multitudes of fhesp, there have been fiequent horfe races. It has a market on Saturday, and feven fairs in the year. The lutt of its patliament men begins the 23d of Edward I. Here is a very girat trade in all manufactures of leather; and fome fpinning is fot up here lately, encouraged by the clsthiers of Devonfhire. On the hills of vorth Lefkard, atd in the way form hence to Launcetton, are many mines of tin, which is caft at the blowing houfes into blocks, that are fent hisher to be cunned.

LESLIE (Johu), biflop of Rofs in Scotland, the fon of Gaviu Leflie an eminent lawyer, was born in the year 1526, and educated at the univelfity of Aberdeen; of which diocele he was made official, when but a yourh. He was foon after created doctur of civil and canon law; but being peculiarly addicted ro the fudy of divinity, he took orders, and hecame parfon of Une. When the reformation began to Spread in Scotland, and difputes about religion ran high, 1)r Lefie, in 1560 , diflinguifhed himfelf at Edinburgh as a principal advocate for the Romin church, and was afterwards deputed by the chief nubility of that religion to condole with queen Mary on the death of her huband the king of France, and to invite ber to return to her native dominions. Aecordingly, after a fhort refidence with her majelly, they embaiked tozether at Calais in 1561, and landed at Leith. She immediately made lim one of her privy council, and a fenator of the college of joflice. In 1564 , he was made abbot of Lundores; and on the death of Sinclair was promoted to the bihopric of Rofs. Thefe accumulated honours he wifhed not to enjoy in luxurious indolence. The influence deri:ed from them, he exerted to the profperity of his country. It is to him that Scotland is indebted for the publication of its laws, commonly called "The thuck acts of parliamerte," from the Saxon character in which they wite printed. At his moft earneit defire, the revifion and colledtion of them were committed to the great officers of the crown. In 1568, quieen Mary having fled to England for refuge, and being there detained a prifoner, queen Elizaheth appointed certain commifioners at York to examine into the caufe of the difoute between Mary and her fuhjects. 'Thefe commiffioners were met by others from the queen of Scors. The bithop of Rofs was of the number, and pleaded the caufe of his royal milirefs with great energy, though without fuceff: Elizabeth had no intention to releafe her. Mary, difappointed in her expectations from the conference at York, fent the biftiop of Rofs anbaffaidur to Elizaberh, who paid little attention to his complainis. He then beyan to ngociate a marriage between his royal miltrefs and the duke of Norfolk; which negociation, it is well known, proved fatal to the duke, and was the canfe of Leflie's being fent to the Tuwer. In 1573 he was banilted the kingdom, and retired to

## L E S

I.entie. Holland. The two following years he fpent in fruitlefs endcavnurs to engage the powers of Europe to efpoufe the caufe of his queen. His laft application was to the pope; but the power of the heretic Elizabeth had no lifs weight with his holinefs than with the other Roman Catholic princes of Eurnpe. Finding all his perfonal applications ineffectual, he had recouffe to his pen in Queen Mary's vindication; but Elizabeth's ultinna ratio regum was too potent for all his arguments. Binop Leflic, during his esile, was made coadjutor to the arcthbihop bof Rouen. He was at Bruffels when he received the account of Queen Mary's execution ; and immediately retired to the convint of Guirternberg near that city, where he died in the year 1596 . It was during the long and unfortunate captivity of Mary, that he amufel himfelf in writing the Hittory of Scotland, and his other works. The elegance and charns of literary occupations f(rveri to affuage the violence of his woes. His know1tdge and judgnent as an hiftorian are equally to be commended. Where he acts as the tranferiber of Boece, there may be diftinguifled, indeed, fome of the inaccuracies of that writer. But, when he feaks in his own perfon, he has a manlinefs, a candour, and a moderation, which appear not always even in authors of the Proteftant perluation. His works are, 1. Affiacia animi confolationes, \&c. compofed for the confolation of the captive queen. 2. De origine, moribus, et gefis Scotorum. 3. De titulo et jure ferenifima Maria Scotorum regine, quo regni Anglixe fuccefionem fibi jufte vindicat. 4. Parenefis ad Anglos et Scolos. 5. De ilturf. faminarum in rpeubl. adminiffranda, \&c. 6. Oratio ad reginam Elizabethann pro libertate impetranda. 7. Paranefis and nobilitatem populumque Scoticum. 8. An account of his proceedings during his embafly in England from 1568 to 1572 ; manufeript, Oxon. 9. Apology for the bifhop of Rofs, concerning the duke of Norfolk; manufcript, Oxon. 10. Several letters, manufcript.

Leslie (Charles), an Irifh divine, and a zealous Proteflant : but being attached to the houfe of Stuart, be lefi Ireland, and went to the pretender at Bar le Dac, and refided with him till near the time of his death; conftantly endeavouring to make him a Protellant, but without effect. He died in 1722. His principal works are, I. A fhort and eafy method with the Deifts. 2. A fhort and eafy method with the Jews. 3. The frake in the grafs. 4. Hereditary right to the Crown of England afterted. 5. The Socinian controverfy difcuffed. 6. The charge of Sociniaifm againt Dr Tillotion confidered; and many others.

All his theological pieces, except that againt Archhifhop Tillotfon, were colleeted and publifhed by him. felf, in 2 vols fulio.

LESSER tone, in mufic. Sce Tone.
LESSINES, a town of the Aultrian Nethertands, in Hainault, feated on the river Dender, and famons for its linen manufacture. W. Long. 3.53. N. Lat. 51.41.

LESSONS, among ecclefiaftical writers, pnrtions of the Foly Scripture, read in Chriltian churches, at the time of divine fervice.

In the ancient church, reading the Scriptures was one part of the fervice of the catechumens; at which all perfons were allowed to be prefent, in order to obtain inifruction.

The church of England, in the choice of leflons, proceeds as follows: for the firll leflon on ordinary days, the directs, to begin at the berinning of the year with Genefis, and fo continue on, till the books of the Old Teflament are read over; only omitting the Chronicles, which are for the moft part the fame with the books of Samuel and Kings, and other particular chapters in other books, either becaufe they contain names of perfons, places, or other matters lefs profitable to ordinary readers.

The courfe of the firft leffons for Sundays is regulated after a different manner. From Advent to Septuagefima.Sunday, fome particular chapters of Ifaiah are appointed to be read, becaufe that book contains the cleareft prophecies concerning Chrif. Upon Septuagefima Sunday Genelis is begun, becaufe that book which treats of the fall of man, and the fevere judgement of God inflicted on the world for fin, bett fuite with a time of repentance and mortification. After Genefis, follow chapters out of the books of the Old Teltament, as they lie in order; only on fellival Sundays, fuch as Eafter, Whitfunday, \&cc. the particular hiltory relating to that day is appointed to be read; and on the faints-day, the church appoints leffons out of the moral books, fuch as Proverbs, Ecclefiaftes, Ecclefialticus, \&ce, as containing excellent inftructions for the conduct of life.

As to the fecond leffons, the church obferves the fanke courfe both on Sundays and week days: reading the gofpels and ACts of the A poftles in the inorning, and the epiftles in the evening, in the order they ftand in the New Teflament : excepting on faints days and holy days, when fuch leffons are appointed as either explain the myftery, relate the hiftory, or apply the example to us.

Vol. VII. p. 99. col. 1. 1. 11. from bottom. For 1760, read 1770.
238. col. I. 1. 16. from bottom. For "See Fillebeg," read "See Philibec."
299. col. r. 1. 23. For flood, read ebb; and in 1. 24. dele "or old."

Vol. VIII. Plate CCXXIX. fig. 8. For 13 , read 17 ; for 14, r. 18 ; for 15 , r. 19; for 16, r. 20; for 17 , r. 13 ; for 18, r. 14 ; for 19 , r. 15 ; for 20, r. 16.

Plate CCXXXIII. fig. 24. The Hatchments $\mathrm{N}^{\circ} \mathrm{I}, \mathrm{z}$. are fhaded, by mifake, on the dexter inftead of the finifler fide.
Vol. IX. In Plate CCLI. fig. 2, 4, 5. (Ichthyology), the letters of refercnce happened to be omitted. Corrected impreffions were intended to have been given; but it was found that the ftate of the plate would not admit of it, and there was not time for a new engraving. The omifions, however, may be eafily fupplied with the pen, by copying in the letters as they are reprefented below :

[^25]:    whom law obliges to work without wages, of whom immediately. Voluntary fervants engage without compulfion, either for mere fubfiltence, or alfo for wages. Thofe who earn their bread in this way, if they fhould ftand off from engaging, may be compelled to it by the juftices of the peace, who have power to fix the rate of their wages.
    35. Colliers, coal-bearers, falters, and other per-Colliersansa fons eceffary to collieries and falt-works, as they are falters particularly defcribed by aet 1661, were formerly tied down to perpetual fervice at the works to which they had once entered. Upon a fale of the works, the tight of their fervice was transferred to the new proprietor. All perfons were prohibited to rcceive them into their fervice, without a teftimonial from their laft matler; and if they deferted to anothcr work, and were redemanded within a year thereafier, he who had received them was obliged to return them within twenty-four hours, under a penalty. But though the proprictor fhould neglect to require the deferter within the jear, he did not, by that fhot prefcription, lofe his property in hia. Colliers, E'c. where the colliery to which they were refrriated was either given up, or not fufficient for their maintenance, might lawfully engage with others; but if that work fhould be again fet a-going, the proprietor might reclaim them back to it.
    36. But by 15 Geo. III. c. 28. thefe reftraints, the Refrrints only remaining veitiges of flavery in the law of Scotland, are abrogated; and, after the ift July 1975 , all colliers, coal-bearers̀, and falters, are declared to be upon the fame footing with other fervants or labourers. The act fubjects thofe who were beund prior to the ift July 1775, to a certain number of years fervice for their freedom, according to the age of the perfun.
    37. The poor make the lowelt clafs or order of per. The poars fons. Indigent children may be compelled to ferve any of the king's fubjcets without wages, till their age of thirty years. Vagrants and furdy beggars may be allo compelled to ferve any manufacturer. And becaufe few perfons were willing to receive them into their fervice, public work-houfes are ordained to be built for fetting them to work. The poor who cannot work, mult be maintained by the parifhes in which they were born; and where the place of their nativity is not known, that burden falls upon the parifles where they have had their moft common refort, for the three years immediately preceding thsir being apprehended or their apply ing for the public charity. Where the cou tributions collected at the churches to which they be-
